

Standard Specification for Engine Coolant Grade 1,3-Propanediol (PDO)¹

This standard is issued under the fixed designation D7388; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers engine coolant grade 1,3-propanediol (PDO).

1.2 The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Requirements

3.1 Engine coolant grade 1,3-propanediol shall conform to the chemical and physical property requirements in [Table 1](#).

4. Sampling

4.1 Sample 1,3-propanediol in accordance with the appropriate sections of Practice [E300](#) for liquid samples.

5. Packaging, Package Marking, and Transportation

5.1 The packaging, labeling, and transportation of commercial quantities shall conform to applicable federal, state, and local regulations. Conformance is the responsibility of the manufacturer and the shipper.

6. Keywords

6.1 engine coolant; glycol; 1,3-propanediol; PDO

*A Summary of Changes section appears at the end of this standard

TABLE 1 Physical and Chemical Requirements

Requirement	Values for PDO	ASTM Test Method
1,3-Propanediol, mass %	99.0 min	under development
Dipropylene glycol, mass %	0.5 max	E202
Other glycols, mass %	0.2 max	E202
Total glycols, mass %	99.5 min	E202
pH at 50 % in DI water	6.00 – 9.00	D1287
Relative density, 20/20°C	1.0520 – 1.0540	D1122, D4052, D5931
Water, mass %	0.5 max	E202
Acidity as acetic acid, mass %	0.01 max	E202
Glycol esters, mass %	^A	^A
Chloride ion, µg/g (ppm)	5 max	D3634, D5827 ^B
Sulfate ion, µg/g (ppm)	10 max	D3634
Nitrite, nitrate, phosphate (total, µg/g (ppm))	10 max	D3634
Silicon, µg/g (ppm)	1 mx	D6130
Boron, µg/g (ppm)	10 max	D6130
Aluminum, calcium, copper, iron, magnesium, lead, zinc (total, µg/g (ppm))	5 max	D6130
Appearance	Clear, no suspended matter	E202
Color, Pt/Co scale	25 max	E202, D1209

^A A titration test method to determine glycol ester content is under development. Specific values will be established once the method has been standardized. However, this is an important property and until such time as specific values are included, a limit for glycol esters should be established by agreement between the supplier and the customer.

^B In case of dispute, Test Method D3634 shall be the preferred test method.

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
