

# Standard Tables for Body Measurements for Mature Big Men Type, Size Range 46–64<sup>1</sup>

This standard is issued under the fixed designation D8077/D8077M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

## INTRODUCTION

These body measurement tables were developed from evaluation of data currently used in the apparel industry.

These tables were developed from data published by the U.S. Department of Commerce; the Caesar Study; the Size USA Study; current U.S. industry; and studies, scans, and documentation from Alvanon Inc.<sup>2</sup> These tables take into consideration mature big men at a standard height of 178 cm (5 ft 10 in.) (65 % of average U.S. population) taking into account the decrease and increase in body weight that shift a person from one size to another, while this person does not gain in height. Major evaluation was done and reviewing the incremental growth at different major body points has been addressed and defined identifying increase and decrease at different rates in specific areas: chest/bust, waist, high-hip, and hip/seat. Additionally, to serve the industry better, incremental movement between sizes was reviewed ensuring smooth transition between sizes. To verify the proposed body measurements, a three-dimensional avatar was created in the mature big men size range 46 through 64 by Alvanon Inc. for a visual reference.

## 1. Scope

1.1 These tables list body measurements of mature big men figure type sizes 46–64. Although these are body measurements, they can be used as a baseline in designing apparel for big men in this size range when considering such factors as fabric type ease for body movement, styling, and fit.

1.2 These tables list body measurements for the complete range of big men sizing.

1.3 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in nonconformance with the standard.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the*

*responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

## 4. Significance and Use

4.1 The use of the body measurement information in **Tables 1 and 2** will assist manufacturers in developing patterns and garments that are consistent with the current anthropometric characteristics of the population of interest. This practice should, in turn, reduce or minimize consumer confusion and dissatisfaction related to apparel sizing. (Also refer to ISO 3635.)

4.2 Three-dimensional avatars depicting each of the big men sizes on certain measurements were created by Alvanon, Inc. and included in these tables to assist manufacturers in visualizing the posture, shape, and proportions generated by the measurements charts in **Figs. 1-3**.

## 5. Apparatus

5.1 *Tape Measure*, dimensionally stable and approximately 1.5 cm [ $\frac{1}{2}$  in.] wide and graduated accurately in centimetres [ $\frac{1}{16}$  in.].

5.2 *Plastic Goniometry*, to measure the radian (degree) of shoulder slope.

5.3 *Scale*, standard, calibrated, body weight type.

5.4 *Metal Ruler*.

## 6. Procedure
