Introduction to the Unified Numbering System

The Unified Numbering System for Metals and Alloys (UNS) provides a means of correlating many internationally used metal and alloy numbering systems currently administered by technical societies, trade associations, and those individual users and producers of metals and alloys. This system avoids the confusion caused by the use of more than one identification number for the same metal or alloy, and the opposite situation of having the same number assigned to two or more different metals or alloys.

It provides the uniformity necessary for efficient indexing, record keeping, data storage and retrieval, and cross-referencing.

A UNS designation is not, in itself, a specification, because it establishes no requirements for form, condition, property, or quality. It is a unified identifier of a metal or an alloy for which controlling limits have been established in specifications published elsewhere.

The UNS establishes 18 series of designations for metals and alloys. Each UNS designation consists of a single-letter prefix followed by five digits. In most cases the letter is suggestive of the family of metals identified: for example, A for aluminum, P for precious metals, S for stainless steels.

Although some of the digits in certain UNS designation groups have special assigned meanings, each series of UNS designations is independent of the others in regard to the significance of digits. This permits greater flexibility and avoids complicated and lengthy UNS designations.

Wherever feasible, and for the convenience of the user, identification “numbers” from existing systems are incorporated into the UNS designations. For example, carbon steel presently identified by the American Iron and Steel Institute as “AISI 1020” is covered by the UNS designation “G10200.”

The UNS designation assignments for certain metals and alloys are established by the relevant trade associations which in the past have administered their own numbering systems; for other metals and alloys, UNS designation assignments are administered by the SAE International. Each of these assigners has the responsibility for administering a specific UNS series of designations. Each considers requests for the assignment of new UNS designations, and informs the applicants of the action taken. UNS designation assigners report immediately to the office of the Unified Numbering System for Metals and Alloys the details of each new assignment for inclusion into the system.

For additional details on the UNS System, see the combined ASTM E527/SAE J1086, “Recommended Practice for Numbering Metals and Alloys,” included in the Appendix.

The listed cross-referenced specifications are representative only and are not necessarily a complete list of specifications applicable to a particular UNS designation.

Preface to the Eleventh Edition

The Unified Numbering System has been in use since 1974. The Eleventh Edition contains more than 5,200 designations in an international identification system for metals and alloys. Since the Tenth Edition was published in 2004, more than 125 new UNS designations have been added. More than 340 changes have been made in a major updating of representative specification cross references and specification indices. The Index of Common Trade Names has been expanded with more than 4,500 additions.

In total, approximately 5,000 changes have been incorporated into the Eleventh Edition of *Metals & Alloys in the Unified Numbering System*.

A UNS designation is not a specification because it establishes no requirements for delivery conditions such as mechanical property requirements, heat analysis tolerances, heat treatment, packaging, marking, inspection, etc. UNS designations are identifying numbers for metals and alloys for which controlling requirements are established and published by technical societies and specifying organizations such as Aluminum Association, American Society of Mechanical Engineers (ASME), ASTM International, SAE International, NACE International, American Welding Society (AWS), Copper Development Association (CDA), and ISO.

The Unified Numbering System operates through the volunteer efforts of a group of experienced, highly qualified metallurgists responsible for each of the various series of metals and alloys. Without their dedication and expertise, this book and the Unified Numbering System could not exist. We would like to extend our special thanks to Harold M. Cobb, Metallurgical Consultant, who was instrumental in the development of the Unified Numbering, for his ongoing dedication and commitment to the project.

James D. Redmond, Ph.D.
Chairman
UNS Advisory Board

UNS on the Web!

A Web version of the Unified Numbering System is available through both SAE and ASTM. It provides convenient online access, advanced search capabilities, and regular updates. It gives customers the ability to search by UNS number, description, common trade name, cross reference organization and specification, and chemical composition. For more information or to sign up for a one-year subscription, contact either SAE or ASTM.

Appendix

NUMBERING METALS AND ALLOYS

Foreword—This Document has not changed other than to put it into the new SAE Technical Standards Board Format.

UNS designations shall not be used for metals and alloys which are not registered under the system described herein, or for any metal or alloy whose composition differs from those registered.

1. **Scope**

- 1.1 This SAE Recommended Practice describes a unified numbering system (UNS) for metals and alloys which have a "commercial standing" (see 6.1), and covers the procedure by which such numbers are assigned.

Section 2 describes the system of alphanumeric designations or "numbers" established for each family of metals and alloys.

Section 3 outlines the organization established for administering the system.

Section 4 describes the procedure for requesting number assignment to metals and alloys for which UNS numbers have not previously been assigned.

- 1.2 The UNS provides a means of correlating many nationally used numbering systems currently administered by societies, trade associations, and individual users and producers of metals and alloys, thereby avoiding confusion caused by use of more than one identification number for the same material; and by the opposite situation of having the same number assigned to two or more entirely different materials. It provides, also, the uniformity necessary for efficient indexing, record keeping, data storage and retrieval, and cross referencing.
- 1.3 A UNS number is not in itself a specification, since it establishes no requirements for form, condition, quality, etc. It is a unified identification of metals and alloys for which controlling limits have been established in specifications published elsewhere. (See 6.2.)

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be reaffirmed, revised, or cancelled. SAE invites your written comments and suggestions.

3. Description of Numbers (or Codes) Established for Metals and Alloys

3.1 The unified numbering system (UNS) establishes 18 series of numbers for metals and alloys, as shown in Table 1. Each UNS number consists of a single letter-prefix followed by five digits. In most cases the letter is suggestive of the family of metals identified, for example, A for aluminum, P for precious metals, S for stainless steels. Table 2 shows the secondary division of some primary series of numbers.

3.2 Whereas some of the digits in certain of the UNS number groups have special assigned meaning, each series is independent of the others in such significance; this practice permits greater flexibility and avoids complicated and lengthy UNS numbers. (See 6.3.)

TABLE 1—PRIMARY SERIES OF NUMBERS

UNS Series	Metal
Nonferrous metals and alloys	
A00001-A99999	Aluminum and aluminum alloys
C00001-C99999	Copper and copper alloys
E00001-E99999	Rare earth and rare earth-like metals and alloys (18 Items, see Table 2)
L00001-L99999	Low melting metals and alloys (14 Items, see Table 2)
M00001-M99999	Miscellaneous nonferrous metals and alloys (12 Items, see Table 2)
N00001-N99999	Nickel and nickel alloys
P00001-P99999	Precious metals and alloys (8 Items, see Table 2)
R00001-R99999	Reactive and refractory metals and alloys (14 Items, see Table 2)
Z00001-Z99999	Zinc and zinc alloys
Ferrous metals and alloys	
D00001-D99999	Specified mechanical properties steels
F00001-F99999	Cast irons
G00001-G99999	AISI and SAE carbon and alloy steels (except tool steels)
H00001-H99999	AISI H-steels
J00001-J99999	Cast steels (except tool steels)
K00001-K99999	Miscellaneous steels and ferrous alloys
S00001-S99999	Heat and corrosion resistant (stainless) steels
T00001-T99999	Tool steels
Welding filler metals	
W00001-W99999	Welding filler metals, covered and tubular electrodes, classified by weld deposit composition (see Table 2)

SAE J1086 and ASTM E 527 Revised JUL95

TABLE 2—SECONDARY DIVISION OF SOME SERIES OF NUMBERS

UNS Series	Metal	UNS Series	Metal
E00001-E99999 Rare earth and rare earthlike metals and alloys		P00001-P99999 Precious metals and alloys	
E00000-E00999	Actinium	P00001-P00999	Gold
E01000-E20999	Cerium	P01001-P01999	Iridium
E21000-E45999	Mixed rare earths ⁽¹⁾	P02001-P02999	Osmium
E46000-E47999	Dysprosium	P03001-P03999	Palladium
E48000-E49999	Erbium	P04001-P04999	Platinum
E50000-E51999	Europium	P05001-P05999	Rhodium
E52000-E55999	Gadolinium	P06001-P06999	Ruthenium
E56000-E57999	Holmium	P07001-P07999	Silver
E58000-E67999	Lanthanum		
E68000-E68999	Lutetium	R00001-R99999 Reactive and refractory metals and alloys

E88000-E89999	Ytterbium	R06001-R06999	Thorium
E90000-E99999	Yttrium	R07001-R07999	Tungsten
		R08001-R08999	Vanadium
F00001-F99999 Cast irons	Gray, malleable, pearlitic malleable, and ductile (nodular) cast irons	R10001-R19999	Beryllium
		R20001-R29999	Chromium
		R30001-R39999	Cobalt
		R40001-R49999	Rhenium
		R50001-R59999	Titanium
		R60001-R69999	Zirconium
K00001-K99999 Miscellaneous steels and ferrous alloys			
L00001-L99999 Low-melting metals and alloys		W00001-W99999 Welding filler metals, classified by weld deposit composition	
L00001-L00999	Bismuth	W00001-W09999	Carbon steel with no significant alloying elements
L01001-L01999	Cadmium		
L02001-L02999	Cesium	W10000-W19999	Manganese-molybdenum low alloy steels
L03001-L03999	Gallium		
L04001-L04999	Indium	W20000-W29999	Nickel low alloy steels
L06001-L06999	Lithium	W30000-W39999	Austenitic stainless steels
L07001-L07999	Mercury	W40000-W49999	Ferritic stainless steels
L08001-L08999	Potassium	W50000-W59999	Chromium low alloy steels
L09001-L09999	Rubidium	W60000-W69999	Copper base alloys
L10001-L10999	Selenium	W70000-W79999	Surfacing alloys
L11001-L11999	Sodium	W80000-W89999	Nickel base alloys
L13001-L13999	Tin		
L50001-L59999	Lead	Z00001-Z99999 Zinc and zinc alloys	Zinc
M00001-M99999 Miscellaneous nonferrous metals and alloys			
M00001-M00999	Antimony		
M01001-M01999	Arsenic		
M02001-M02999	Barium		
M03001-M03999	Calcium		
M04001-M04999	Germanium		
M05001-M05999	Plutonium		
M06001-M06999	Strontium		
M07001-M07999	Tellurium		
M08001-M08999	Uranium		
M10001-M19999	Magnesium		
M20001-M29999	Manganese		
M30001-M39999	Silicon		

1. Alloys in which the rare earths are used in the ratio of their natural occurrence (that is, unseparated rare earths). In this mixture, cerium is the most abundant of the rare earth elements.

3.3 Wherever feasible, identification "numbers" from existing systems are incorporated into the UNS numbers. For example: The carbon steel which is presently identified by "AISI 1020" (American Iron & Steel Institute) is covered by "UNS G10200" and the nickel alloy presently identified by "M252" is covered by "UNS N07252."

3.4 Welding filler metals fall into two general categories: those whose compositions are determined by the filler metal analysis (e.g., solid bare wire or rods and cast rods), and those whose composition is determined by the weld deposit analysis (e.g., covered electrodes, flux-cored and other composite wire electrodes). The latter are assigned to a new primary series with the letter W as shown in Table 1. The solid bare wire and rods continue to be assigned in the established number series according to their composition.

(Readers are cautioned not to make their own "assignments" of numbers from such listings, as this can result in unintended and unexpected duplication and conflict.)

3.5 The ASTM and the SAE periodically publish up-to-date listings of all UNS numbers assigned to specific metals and alloys, with appropriate reference information on each. (See 6.6.) Many trade associations also publish similar listings related to materials of primary interest to their organizations.

4. *Organization for Administering Unified Numbering System for Metals and Alloys*

4.1 The organization for administering the UNS consists of: (1) an advisory board, (2) several number-assigning offices, (3) a corps of volunteer consultants, and (4) staffs at ASTM and SAE. In addition, SAE and ASTM committees dealing with various groups of materials may be consulted.

4.1.1 The Advisory Board has approximately 20 volunteer members who are affiliated with major producing and using industries, trade associations, government agencies, and standards societies, and who have extensive experience with identification, classification, and specification of materials. The Board is the administrative arm of SAE and ASTM on all matters pertaining to the UNS. It coordinates thinking on the format of each series of numbers and the administration of each by selected experts. It sets up ground rules for determining eligibility of any material for a UNS number, for requesting such numbers, and for appealing unfavorable rulings. It is the final referee on matters of disagreement between requesters and assigners.

4.1.2 UNS number assigners for certain materials are set up at trade associations which have successfully administered their own numbering systems; for other materials, assigners are located at the offices of SAE and ASTM. Each of these assigners has the responsibility for administering a specific series of numbers, as shown in Table 3. Each considers requests for assignment of new UNS numbers, and informs applicants of the action taken. Trade association UNS number assigners also report immediately to both SAE and ASTM details of each number assignment. ASTM and SAE assigners collaborate with designated consultants when considering requests for assignment of new numbers.

4.1.3 Consultants are selected by the Advisory Board to provide expert knowledge of a specific field of materials. Since they are utilized primarily by the Board and the SAE and ASTM number assigners, they are not listed in this document. At the request of the ASTM or SAE number assigner, a consultant considers a request for a new number in light of the ground rules established for the material involved, decides whether a new number is justified, and informs the ASTM or SAE number assigner accordingly.

This utilization of experts (consultants and number assigners) is intended to insure prompt and fair consideration of all requests. It permits each decision to be based on current knowledge of the needs of a specific industry of producers and users.

SAE J1086 and ASTM E 527 Revised JUL95

- 4.1.4 Staff members at SAE and ASTM maintain duplicate master listings of all UNS numbers assigned.
- 4.1.5 Established SAE and ASTM committees which normally deal with standards and specifications for the materials covered by the UNS, and other knowledgeable persons, are called upon by the Advisory Board for advice when considering appeals from unfavorable rulings in the matter of UNS number assignments.
- 5. *Procedure for Requesting Number Assignment to Metals and Alloys Not Already Covered by UNS Numbers (or Codes)***
- 5.1 UNS numbers are assigned only to metals and alloys which have a commercial standing (as defined in 6.1).
- 5.2 The need for a new number should always be verified by determining from the latest complete listing of already assigned UNS numbers that a usable number is not available. (See 6.4.)
- 5.3 For a new UNS number to be assigned, the composition (or other properties, as applicable) must be significantly different from those of any metal or alloy which has already been assigned a UNS number.
 - 5.3.1 In the case of metals or alloys that are normally identified or specified by chemical composition, the chemical composition limits must be reported.
 - 5.3.2 In the case of metals or alloys which are normally identified or specified by mechanical (or other) properties, such properties and limits thereof must be reported. Only those chemical elements and limits, if any, which are significant in defining such materials need be reported.
- 5.4 Requests for new numbers shall be submitted on "Application for UNS Number Assignment" forms (Figure 1). Copies of these are available from any UNS number assigning office (Table 3) or facsimiles may be made of the one herein.
- 5.5 All instructions on the printed application form should be read carefully and all information provided as indicated. (See 6.5.)
- 5.6 To further assist in assigning UNS numbers, the requester is encouraged to suggest a possible UNS number in each request, giving appropriate consideration to any existing number presently used by a trade association, standards society, producer, or user.
- 5.7 Each completed application form shall be sent to the UNS number assigning office having responsibility for the series of numbers which appears to most closely relate to the material described on the form (Table 3).

FIGURE 1A—APPLICATION FORM FOR UNS NUMBER ASIGNMENT (FRONT)

SAE J1086 and ASTM E 527 Revised JUL95

GENERAL

Before attempting to complete this form, the applicant should be thoroughly familiar with the objectives of the UNS and the "ground rules" for assigning numbers, as stated in Section 4 of SAE J1086 and ASTM E 527.

MATERIAL DESCRIPTION

Identify: the base element; the single alloying element that constitutes 50% or more of the total alloy content; other distinguishing predominant characteristics (such as "casting"); and common or generic names if any (such as "ounce metal" or "Waspalloy"). When no single element makes up 50% or more of the total alloy content, list in decreasing order of abundance the two alloying elements which together constitute the largest portion of the total alloy content; except that if no two elements make up at least 50% of the total alloy content, list the three most abundant, and so on. Instead of "iron," use "steel" to identify the base element of those iron-low-carbon alloys commonly known as steels.

When mechanical properties or physical characteristics are the primary defining criteria and chemical composition is secondary or nonsignificant, enter such properties and characteristics with the appropriate values or limits for each.

SUGGESTED UNS NO.

While applicant's suggestion may or may not be the one finally assigned, it will assist proper identification of the material by the UNS Number Assigner.

CHEMICAL COMPOSITION

Enter limits such as 0.13-0.18 (not .13-.18 or 0.13 to 0.18), 1.5 max, 0.040 min, and balance. In space designated "other," enter information such as "0.05 max each, 0.15 max total" and "Sn+Pb 2.0 min." Additional specific elements not included in the list on this form may be entered in the spaces provided at the end of the list.

CROSS REFERENCES

Letter symbols listed indicate widely known trade associations and standards issuing organizations. Enter after appropriate symbols any known specification numbers or identification numbers issued by such groups to cover material equivalent to, similar to, or closely resembling the subject material.

Examples: SAE J404 (50B44), AISI 415, ASTM A 638 (660)

In space designated "other" enter any pertinent numbers issued by groups not listed above. In these instances, the full name and address of the issuing group shall be included.

**SUBMIT COMPLETED FORM TO
APPROPRIATE UNS NUMBER
ASSIGNER, AS LISTED IN
SAE J1086 AND ASTM E 527**

FIGURE 1B—APPLICATION FORM FOR UNS NUMBER ASSIGNMENT (BACK)

6. Notes

- 6.1** The terms "commercial standing," "production usage," and others, are intended to portray a material in active industrial use, although the actual amount of such use will depend, among other things, upon the type of materials. (Obviously gold will not be used in the same "tonnages" as hot rolled steel.)

Different standardizing groups use different criteria to define the status that a material has to attain before a standard number will be assigned to it. For instance, the American Iron and Steel Institute requires for stainless steels "two or more producers with combined production of 200 tons per year for at least two years"; the Copper Development Association requires that the material be "in commercial use (without tonnage limits)"; the Aluminum Association requires that the alloy must be "offered for sale (not necessarily in commercial use)"; the SAE Aerospace Materials Division calls for "repetitive procurement by at least two users."

While it is apparent that no hard and fast usage definition can be set up for an all-encompassing system, the UNS numbers are intended to identify metals and alloys that are in more or less regular production and use.

A UNS number will not ordinarily be issued for a material which has just been conceived or which is still in only experimental trial.

- 6.2** Organizations that issue specifications should report to appropriate UNS number assigning offices (see 4.1.2) any specification changes which affect descriptions shown in published UNS listings.
- 6.3** This arrangement of alphanumeric six character numbers is a compromise of the thinking that identification numbers should indicate many characteristics of the material, and the thinking that numbers should be short and uncomplicated to be widely accepted and used.
- 6.4** In assigning UNS numbers, and consequently in searching complete listings of numbers, the predominant element of the metal or alloy usually determines the prefix letter of the series to which it is assigned. In certain instances where no one element predominates, arbitrary decisions are made as to what prefix letter to use, depending upon the producing industry and other factors.
- 6.5** The application form is designed to serve also as a data input sheet to facilitate processing each request through to final printout of the data on electronic data processing equipment and to minimize transcription errors at number-assigning offices and data processing centers.
- 6.6** One such listing is ASTM Publication No. DS-56 and SAE Handbook Supplement HS-1086 (a joint ASTM-SAE publication).
- 6.7** **Marginal Indicia**—The change bar (I) located in the left margin is for the convenience of the user in locating areas where technical revisions have been made to the previous issue of the report. An (R) symbol to the left of the document title indicates a complete revision of the report.

SAE J1086 and ASTM E 527 Revised JUL95

Rationale—The only change to the document was in Table 3—Copper Development Association's address changed.

Relationship of SAE Standard to ISO Standard—Not applicable.

Application—This SAE Recommended Practice describes a unified numbering system (UNS) for metals and alloys which have a "commercial standing" (see 6.1), and covers the procedure by which such numbers are assigned.

Section 2 describes the system of alphanumeric designations or "numbers" established for each family of metals and alloys.

Section 3 outlines the organization established for administering the system.

Section 4 describes the procedure for requesting number assignment to metals and alloys for which UNS numbers have not previously been assigned.

The UNS provides a means of correlating many nationally used numbering systems currently administered by societies, trade associations, and individual users and producers of metals and alloys, thereby avoiding confusion caused by use of more than one identification number for the same material; and by the opposite situation of having the same number assigned to two or more entirely different materials. It provides, also, the uniformity necessary for efficient indexing, record keeping, data storage and retrieval, and cross referencing.

A UNS number is not in itself a specification, since it establishes no requirements for form, condition, quality, etc. It is a unified identification of metals and alloys for which controlling limits have been established in specifications published elsewhere. (See 6.2.)

Index to UNS Designations by Base Elements

<u>Element</u>	<u>Symbol</u>	<u>UNS Designation</u>	<u>Element</u>	<u>Symbol</u>	<u>UNS Designation</u>
Actinium	Ac	E00000 - E00999	Rhodium	Rh	P05001 - P05999
Aluminum	Al	A00001 - A99999	Rubidium	Rb	L09001 - L09999
Antimony (Stibium)	Sb	M00001 - M00999	Ruthenium	Ru	P06001 - P06999
Argentum (Silver)	Ag	P07001 - P07999	Samarium	Sm, Sa	E79000 - E82999
Arsenic	As	M01001 - M01999	Scandium	Sc	E83000 - E84999
Aurum (Gold)	Au	P00001 - P00999	Selenium	Se	L10001 - L10999
Barium	Ba	M02001 - M02999	Silicon	Si	M30001 - M39999
Beryllium (Glucinum)	Be	R10001 - R19999	Silver (Argentum)	Ag	P07001 - P07999
Bismuth	Bi	L00001 - L00999	Sodium (Natrium)	Na	L11001 - L11999
Boron	B	R01001 - R01999	Stannum (Tin)	Sn	L13001 - L13999
Cadmium	Cd	L01001 - L01999	Steels - AISI H		H00001 - H99999
Calcium	Ca	M03001 - M03999	Steels - Cast		J00001 - J99999
Cassiopeium (Lutetium)	Lu	E68000 - E68999	Steels - Miscellaneous		K00001 - K99999
Cerium	Ce	E01000 - E20999	Steels - SAE/AISI		G00001 - G99999
Cesium	Cs	L02001 - L02999	Carbon and Low		
Chromium	Cr	R20001 - R29999	Alloy Steels		
Cobalt	Co	R30001 - R39999	Steels - Stainless		S00001 - S59999
Columbium (Niobium)	Cb	R04001 - R04999	Steels - Tool		T00001 - T99999
Copper (Cuprum)	Cu	C00001 - C99999	Steels - Valve Steels and		S60001 - S69999
Cuprum (Copper)	Cu	C00001 - C99999	High Temperature		
Dysprasium	Dy	E46000 - E47999	Alloys		
Erbium	Er	E48000 - E49999	Stibium (Antimony)	Sb	M00001 - M00999
Europium	Eu	E50000 - E51999	Strontium	Sr	M06001 - M06999
Ferrum, Cast (Iron, Cast)	Fe	F00001 - F99999	Tantalum	Ta	R05001 - R05999
Gadolinium	Gd	E52000 - E55999	Tellurium	Te	M07001 - M07999
Gallium	Ga	L03001 - L03999	Terbium	Tb	E85000 - E86999
Germanium	Ge	M04001 - M04999	Thallium	Tl	L12001 - L12999
Glucinum (Beryllium)	Be	R10001 - R19999	Thorium	Th	R06001 - R06999
Gold (Aurum)	Au	P00001 - P00999	Thulium	Tm	E87000 - E87999
Hafnium	Hf	R02001 - R02999	Tin (Stannum)	Sn	L13001 - L13999
Holmium	Ho	E56000 - E57999	Titanium	Ti	R50001 - R59999
Hydrargyrum (Mercury)	Hg	L07001 - L07999	Tungsten (Wolfram)	W	R07001 - R07999
Indium	In	L04001 - L04999	Uranium	U	M08001 - M08999
Iridium	Ir	P01001 - P01999	Vanadium	V	R08001 - R08999
Iron, Cast (Ferrum, Cast)	Fe	F00001 - F99999	Weld, Filler - Austenitic		W30000 - W39999
Kalium (Potassium)	K	L08001 - L08999	Stainless Steels		
Lanthanum	La	E58000 - E67999	Weld, Filler - Carbon		W00000 - W09999
Lead (Plumbum)	Pb	L50001 - L59999	Steels		
Lithium	Li	L06001 - L06999	Weld, Filler Metal -		W50000 - W59999
Lutetium (Cassiopeium)	Lu	E68000 - E68999	Chromium Low Alloy		
Magnesium	Mg	M10001 - M19999	Steels		
Manganese	Mn	M20001 - M29999	Weld, Filler - Copper		W60000 - W69999
Mercury (Hydrargyrum)	Hg	L07001 - L07999	Alloys		
Mixed rare earths		E21000 - E45999	Weld, Filler - Ferritic		W40000 - W49999
Molybdenum	Mo	R03001 - R03999	Stainless Steels		
Natrium (Sodium)	Na	L11001 - L11999	Weld, Filler -		W10000 - W19999
Neodymium	Nd	E69000 - E73999	Manganese-		
Niobium (Columbium)	Nb	R04001 - R04999	Molybdenum Alloys		
Osmium	Os	P02001 - P02999	Weld, Filler - Ni Alloys		W80000 - W89999
Palladium	Pd	P03001 - P03999	Weld, Filler - Ni Steels		W20000 - W29999
Platinum	Pt	P04001 - P04999	Weld, Surfacing Alloys		W70000 - W79999
Plumbum (Lead)	Pb	L50001 - L59999	Wolfram (Tungsten)	W	R07001 - R07999
Plutonium	Pu	M05001 - M05999	Ytterbium	Yb	E88000 - E89999
Potassium (Kalium)	K	L08001 - L08999	Yttrium	Y	E90000 - E99999
Praesodymium	Pr	E74000 - E77999	Zinc	Zn	Z00001 - Z99999
Promethium	Pm	E78000 - E78999	Zirconium	Zr	R60001 - R69999
Rhenium	Re	R40001 - R49999
