

Designation: E2135 – 10a (Reapproved 2017)

Standard Terminology for Property and Asset Management¹

This standard is issued under the fixed designation E2135; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This terminology covers traditional property management definitions and some of the terms introduced in additional asset management standards that are used most often and considered most important. As new standards are developed, new terms will be added to this terminology in future revisions.

1.2 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

2.1 ASTM Standards:²

- E2221 Practice for Administrative Control of Property (Withdrawn 2011)³
- E2306 Practice for Disposal of Personal Property
- E2452 Practice for Equipment Management Process Maturity (EMPM) Model
- E2453 Practice for Determining the Life-Cycle Cost of Ownership of Personal Property
- E2495 Practice for Prioritizing Asset Resources in Acquisition, Utilization, and Disposition
- E2604 Practice for Data Characteristics of Equipment Asset Record
- E2606 Practice for Receipt Notification as a Result of Tangible Asset Movement
- E2607 Practice for Cannibalization/Reclamation of Serviceable Equipment Components to Support Demand Requirements
- E2608 Practice for Equipment Control Matrix (ECM)

- E2674 Practice for Assessment of Impact of Mobile Data Storage Device (MDSD) Loss (Withdrawn 2015)³
- E2675 Practice for Property Management System Outcomes
- E2811 Practice for Management of Low Risk Property (LRP)
- E2812 Practice for Uniform Data Management in Asset Management Records Systems
- E2936 Guide for Contractor Self Assessment for U.S. Government Property Management Systems
- E2962 Guide for Fleet Management
- E3015 Guide for Management of Customer-Owned Property Assets in Possession of Supplier, Contractor or Subcontractor

2.2 Other Documents:

- Auditing Standard No. 2 An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements⁴
- Federal Acquisition Regulation (FAR) Part 45 Clause 52.245-1 Government Property⁵
- GAO-12-331G Government Auditing Standards⁶
- International Standard on Assurance Engagements (ISAE) 3402 Assurance Reports on Controls at a Service Organization⁷
- OMB Circular A-123 Management's Responsibility for Internal Control⁸

3. Terminology

3.1 Terms and Definitions:

- abandon**, *v*—to give up all and any future claim to rights or interest in property.
- abandoned property**, *n*—property of any type over which the rightful owner has relinquished possession and any claim of an ownership interest.

¹ This terminology is under the jurisdiction of Committee E53 on Asset Management and is the direct responsibility of Subcommittee E53.06 on Terminology.

Current edition approved May 1, 2017. Published May 2017. Originally approved in 2001. Last previous edition approved in 2010 as E2135 – 10a ϵ ². DOI: 10.1520/E2135-10AR17.

abatement, *n*—a reduction or cancellation of an assessed tax.

ABC method, *n*—inventory management method that categorizes items in terms of importance. Thus, more emphasis is placed on higher dollar value items (“A”s) than on lesser dollar value items (“B”s), while the least important items (“C”s) receive the least time and attention. Inventory should be analyzed frequently when using the ABC method. The procedure for ABC analysis follows: (1) Separate finished goods into types (chairs of different models, and so on); separate raw materials into types (screws, nuts, and so on). (2) Calculate the annual dollar usage for each type of inventory (multiply the unit cost by the expected future annual usage). (3) Rank each inventory type from highest to lowest, based on annual dollar usage. (4) Classify the inventory as A—the top 20 %; B—the next 30 %; and C—the last 50 % of dollars usage, respectively. (5) Tag the inventory with its appropriate ABC classification and record those classifications in the item inventory master records.

abnormal spoilage, *n*—for government accounting under the FAR, abnormal spoilage may or may not be allowable cost. If the cost is deemed allowable, the cost would normally be charged consistently with normal spoilage.

accelerated cost recovery system (ACRS), *n*—system of depreciation for tax purposes mandated by the Economic Recovery Act (ERA) of 1981 and modified by the Tax Reform Act of 1986. The type of property determines its class. Instead of providing statutory tables, prescribed methods of depreciation are assigned to each class of property. For 3, 5, 7, and 10-year classed, the relevant depreciation method is the 200 % declining balance method. For 15 and 20-year property, the appropriate method is the 150 % declining balance method switching to the straight-line method when it will yield a larger allowance. For residential rental property (27.5 years) and nonresidential real property (31.5 years), the applicable method is the straight-line method. A taxpayer may make an irrevocable election to treat all property in one of the classes under the straight-line method. Property is statutorily placed in one of the classes. The purpose of ACRS is to encourage more capital investment by businesses. It permits a faster recovery of the asset’s cost and thus provides larger tax benefits in the earlier years. See also *modified accelerated cost recovery systems (MACRS)*.

accelerated depreciation, *n*—any method of calculating depreciation charges where the charges become progressively smaller each period

accessory item, *n*—an item that facilitates or enhances the operation of equipment but is not essential for its basic operation.

accountability, *n*—individual or departmental responsibility to perform a certain function. Accountability may be dictated or implied by law, regulation, or agreement. For example, an auditor will be held accountable to financial statement users relying on the audited financial statements for failure to uncover corporate fraud because of negligence in applying generally accepted auditing standards (GAAS).

accounting change, *n*—change in: (1) accounting principles (such as a new depreciation method); (2) accounting estimates (such as a revised projection of doubtful accounts receivable); or (3) the reporting entity (such as a merger of companies). When an accounting change is made, appropriate footnote disclosure is required to explain its justification and financial effect, thereby enabling readers to make appropriate investment and credit judgments. Proper justification for a change in accounting principles may be the issuance of a new FASB pronouncement, SEC Accounting Series Release (ASR), or IRS regulation. Changes in estimates are justified by changing circumstances such as a greater degree of wear and tear of a fixed asset than originally anticipated. Generally, the consistent use of accounting principles and procedures is essential in appraising and entity’s activities and in the projection of future results; however, changes in the reporting entity have to be retroactively reflected for comparative purposes.

accretion, *n*—increase in economic worth through physical change, usually said of a natural resource such as an orchard, caused by natural growth. Contrast with **appreciation**.

accumulated depreciation, *n*—sum of depreciation charges taken to date on a fixed asset. Accumulated depreciation is a contra account to the fixed asset to arrive at book value. For example, on 1/1/2000 an auto is bought costing \$10 000, with a salvage value of \$1000 and a life of 10 years. Using straight-line depreciation, the accumulated depreciation on 12/31/2003 would be \$3600 ($\900×4).

acquired property, *n*—property under the possession or control of an entity that is not deemed “furnished property” and was acquired for business operation purposes. **E3015**

acquisition, *n*—hardware, supplies or services through purchase, lease, or other means, including transfer or fabrication, whether the supplies or services are already in existence or must be created, developed, demonstrated, and evaluated. **E2607**

activity-based depreciation, *n*—production method of depreciation.

actual cash value, *n*—the cost of replacing damaged property with other property of like kind and quality in the physical condition of the property immediately before the damage.

actual cost, *n*—an amount determined on the basis of cost incurred including standard cost properly adjusted for applicable variance.

adjusted basis, *n*—the basis used to compute gain or loss on disposition of an asset for tax purposes. Also, see **book value**.

administratively controlled property, *n*—the property assets that are controlled at the discretion of asset managers managing the inventories of individual operational units. **E2221**

ad valorem tax—levy imposed on the value of property. The most common *ad valorem* tax is that imposed by states,

counties, and cities on real estate. *Ad valorem* taxes can, however, be imposed on personal property.

agency-peculiar property, *n*—as used in DoD, means military property and includes end items and integral components of military weapons systems, along with the related peculiar support equipment which is not readily available as a commercial item.

allocate, *v*—to assign an item of cost, or a group of items of cost, to one or more cost objectives. This term includes both direct assignment of cost and the reassignment of a share from an indirect cost pool.

amortization, *n*—gradual reduction of an amount over time. Examples are amortized expenses on intangible assets and deferred charges. Assets with limited life have to be written down over the period benefited. For example, all intangible assets must be amortized using the straight-line method not exceeding 40 years; the amortization entry in that case is to debit amortization expense and credit the intangible asset.

amortization, *n*—the gradual extinguishment of any amount over a period of time through a systematic allocation of the amount over a number of consecutive accounting periods such as the retirement of a debt by serial payments to a sinking fund.

amortization, *n*—normally applies to intangibles whereas depreciation applies to tangible assets.

amortize, *v*—to write off a regular portion of an asset's cost over a fixed period of time. Examples are amortization expense on an intangible asset and depletion expense on a natural resource. See also *sales return*.

analytical hierarchy process (AHP), *n*—decision-making model that reduces complex decisions to one on one comparisons resulting in the ranking of a list of objectives or alternatives. **E2495**

appraisal, *n*—the process of obtaining a valuation for an asset or liability that involves expert opinion rather than explicit market transaction.

appraisal method of depreciation, *n*—the periodic depreciation charge is the difference between the beginning and end-of-period appraised value of the asset if that difference is positive. If negative, there is no charge. Not generally accepted.

appreciation, *n*—increase in the value of an asset. The asset may be real estate or a security. For example, an individual sold 100 shares of XYZ company's stock for \$105 per share that he bought 10 years ago for \$25 per share. The amount of appreciation was \$8000 = $(\$105 - \$25) \times 100$ shares.

assembly, *n*—a number of parts or subassemblies joined together.

assessed valuation, *n*—a dollar amount for real estate or other property used by a government as a basis for levying taxes. The amount may or may not bear some relation to market value.

assessed value, *n*—value established by a government for real estate or other property as a basis for levying taxes. For example, an individual receives a statement that, in the judgment of the local tax assessor, the individual's property is worth \$50 000. If by law, properties in this jurisdiction are assessed at 80 % of market value, the individual's assessed value then is \$40 000 (80 % of \$50 000) and property taxes will be based on this assessed value.

asset, *n*—(1) anything owned having monetary value; (2) tangible or intangible items owned by an entity that have probable economic benefits that can be obtained or controlled by the entity.

asset accountability unit, *n*—a tangible capital asset which is a component of plant and equipment that is capitalized when acquired or whose replacement is capitalized when the unit is removed, transferred, sold, abandoned, demolished, or otherwise disposed of.

asset priority index (API), *n*—numerical value assigned to an asset reflecting its value to an entity's mission or other critical assignments as defined by the criteria set forth by management. **E2495**

average age of inventory, *n*—number of days an average inventory item takes to sell: For example, assume that average inventory is \$47 500 and cost of goods sold is \$500 000. The average age of inventory is $(\$47\,500/\$500\,000) \times 365$ days = 34.7 days. See also *days to sell inventory*. Average Inventory divided by Average Age of Inventory = Cost of Goods Sold \times 365 days.

average inventory, *n*—amount equaling about half maximum inventory when demand is relatively constant. For example, if the maximum inventory is 500 units and depletion occurs at a fairly constant rate, the average inventory equals 250 units (500/2).

average life, *n*—estimated useful-life expectancy of a depreciable group of assets. See also **depreciation**; *economic life*; *useful life*.

bailment, *n*—contractual transfer of dollars or personal property for a specified objective. An example is the consignment of goods from the consignor to consignee. Another example is a bank holding an asset of a borrower as collateral. In a bailment, the deliverer is called the bailor and the receiver is termed the bailee.

bargain purchase, *n*—asset or goods acquired for materially less than fair market value. For example, a buyer may be able to get a bargain price on furniture from a seller in a liquidation situation.

bargain purchase option, *n*—a provision allowing the lessee the option of purchasing the leased property for an amount, exclusive of lease payments, which is sufficiently lower than the expected fair value of the property at the date the option become exercisable. Exercise of the option must appear reasonably assured at the inception of the lease. GAAP does not offer additional guidance defining "sufficiently lower," in which many factors such as time value of money, usage, and

technological changes influence whether the option fulfills the criteria for a bargain.

bargain renewal option, *n*—a provision allowing the lessee the option to renew the lease agreement for a rental payment sufficiently lower than the expected fair rental of the property at the date the option becomes exercisable. Exercise of the option must appear reasonably assured at the inception of the lease.

basic research, *n*—research directed toward increasing knowledge in science. The primary aim of basic research is a fuller knowledge or understanding of the subject under study, rather than any practical application of that knowledge.

basis, *n*—acquisition cost, or some substitute thereof of an asset used in computing gain or loss on disposition or retirement.

bench stock, *n*—low cost, high usage, non-sensitive consumable material issued to work areas. Quantities of such stock do not normally exceed an amount that would normally be consumed within a 30-day period or as established in the property control system.

betterment, *n*—an expenditure having the effect of extending the useful life of an existing asset, increasing its normal rate of output, lowering its operating cost, increasing rather than merely maintaining its efficiency or otherwise adding to the worth of benefits it can yield. A betterment is distinguished from repair or maintenance in that the latter have the effect of merely keeping the asset in its customary state of operating efficiency without the expectation of added future benefits.

bid and proposal cost, *n*—the cost incurred in preparing, submitting, or supporting any bid or proposal which effort is neither sponsored by a grant, nor required in the performance of a contract.

bill of materials (BOM), *n*—listing of all the assemblies, subassemblies, parts, and raw materials that are needed to produce one unit of a finished product. Thus, each finished product has its own bill of materials. The listing in the bill of materials file is hierarchical; it shows the quantity of each item needed to complete one unit of the next-highest level of assembly.

bill of sale, *n*—written document that transfers goods, title, or other interests from a seller to a buyer and specifies the terms and conditions of the transaction.

blanket insurance, *n*—policy covering several items of property. The insurance policy is allocated to the property items based on their fair market values.

book inventory, *n*—inventory shown on the financial records. It is a book value as opposed to a physical count of inventory and is computed from the initial inventory plus purchases less requisitions or withdrawals. Book inventory typically differs from the physical inventory on hand due to shrinkage (that is, loss caused by such factors as evaporation and thefts).

book value, *n*—the net amount at which an asset or liability is carried on the books of account.

business unit, *n*—any segment of an organization, or an entire business organization which is not divided into segments.

calibration, *n*—the act of standardizing or determining the deviation from a standard so as to ascertain the proper correction factors.

cannibalization, *n*—removal of serviceable components from one item of equipment in order to install them on another item of equipment. The removal of components from one item of equipment for the purpose of repairing other similar equipment. **E2607**

capacity, *n*—ability to produce during a given time period, with an upper limit imposed by the availability of space, machinery, labor, materials, or capital. Capacity may be expressed in units, weights, size, dollars, man-hours, labor cost, etc. Typically, there are five different concepts of capacity. (1) *Ideal Capacity*—volume of activity that could be attained under ideal operating conditions, with minimum allowance for inefficiency. It is the largest volume of output possible. Also called *theoretical capacity*, *engineered capacity*, or *maximum capacity*. (2) *Practical Capacity*—highest activity level at which the factory can operate with an acceptable degree of efficiency, taking into consideration unavoidable losses of productive time (that is, vacations, holidays, repairs to equipment). Also called *maximum practical capacity*. (3) *Normal Capacity*—average level of operating activity that is sufficient to fill the demand for the company's products or services for a span of several years, taking into consideration seasonal and cyclical demands and increasing or decreasing trends in demand. (4) *Expected Actual Capacity*—similar to normal capacity, except it is a short-run level based on demand, it minimizes under- or over-applied overhead but does not provide a consistent basis for assigning overhead cost. Per-unit overhead will fluctuate because of short-term changes in the expected level of output. Also called *planned capacity*. (5) *Operating Capacity*—similar to planned capacity except the time period is within a small slice of a single year (that is, daily, monthly, quarterly).

capital, *n*—long-term assets that are not bought and sold in the ordinary course of business. The term usually refers to fixed assets such as machinery, equipment, building, and land.

capital addition—(1) new (as opposed to replacement) part added to an existing noncurrent productive asset (for example, equipment) used for business purposes that increases the useful life and service potential of the asset. (2) In taxation, cost of capital improvements and betterments made to the property by a taxpayer. (3) Anything added to long-term productive assets.

capital asset, *n*—asset purchased for use in production over long periods of time rather than for resale. It includes (a) land, buildings, plant and equipment, mineral deposits, and timber reserves; (b) patents, goodwill, trademarks, and leaseholds; and (c) investments in affiliated companies.

capital expenditure, *n*—outlay charged to a long-term asset account. A capital expenditure either adds a fixed asset unit or increases the value of an existing fixed asset. An example is a new motor for a truck.

capital expenditure budget, *n*—plan prepared for individual capital expenditure projects. The time span of this budget depend upon the project. Capital expenditures to be budgeted include replacement, acquisition, or construction of plants and major equipment. See also **capital budgeting**.

capital gain, *n*—tax term involved with selling or exchanging a capital asset. Individual: Maximum tax rate on capital gains is 20 % compared to the maximum tax rate on ordinary income of 39.6 % for those having taxable incomes exceeding \$250 000. Corporation: Capital gains are taxed at 20 %. See also **capital loss**.

capital investment decisions, *n*—management decisions about when and how much to spend on capital facilities for the organization.

capitalization of interest, *n*—process of deferring interest as an asset rather than an expense. Interest charges can be deferred interest as an asset rather than an expense. Interest charges can be deferred only for interest incurred on borrowed funds for the self-construction of an asset or for discrete projects (for example, real estate). The amount of interest capitalized is based on the company's or entity actual borrowings and interest payments. The interest rate to be used is the rate on the specific borrowing associated with that self-constructed asset. If this cannot be achieved, the weighted-average interest rate on corporate debt is used.

capitalize, *v*—to record and carry forward into one or more future periods any expenditure the benefits or process from which will then be realized.

capital loss, *n*—federal tax term for the loss on the sale or exchange of a capital asset. Individual: Capital losses are fully deductible to offset capital gains and can offset \$3000 of ordinary income. Corporation: Capital losses are deductible only to the extent of capital gains.

care and handling, *n*—the term “care and handling” includes completing, repairing, converting, rehabilitating, operating, preserving, and transporting excess and surplus property, and, in the case of property.

carrying costs, *n*—expenses incurred because a firm keeps inventories, also called *holding costs*. They include interest forgone on money invested in inventory, storage cost, taxes, and insurance. The greater the inventory level, the higher the carrying costs.

carrying value, *n*—amount shown on an entity's books for assets, liabilities, or owner's equity, net of reductions or offsets such as for accumulated depreciation, allowance for bad debts, and bond discount; also called **book value**. It may refer to the entire firm's excess of total assets over total liabilities.

category of material, *n*—a particular kind of goods, comprised of identical or interchangeable units, acquired or produced

by a contractor, which are intended to be sold, or consumed or used in the performance of either direct or indirect functions.

charge off, *v*—to treat as a loss or expense an amount originally recorded as an asset; usually the term is used when the charge is not in accord with original expectations.

classification of assets, *n*—process of grouping economic resources under appropriate categories. Asset categories include current assets, fixed assets, intangible assets, investments, and deferred costs. Assets are classified into major groupings to facilitate analysis of the entity's financial health. For instance, a company's liquidity can be appraised by concentrating on the current assets less prepaid expenses which are available to meet short-term debt.

classification of defects, *n*—the enumeration of possible defects of the assessment sample classified according to their seriousness, that is, critical, major or minor defect. **E2936**

cleanup costs, *n*—the costs of removing, containing, or disposing, or any combination thereof, of (1) hazardous waste from property, or (2) material or property, or both, that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E.

closing inventory, *n*—ending inventory.

coding, *n*—generating detailed instructions in a computer language to carry out the requirements described in the detail program design. The coding of a computer software product may be prior to, concurrent with, or subsequent to the completion of the detail program design.

commercial item, *n*—(1) Any item, other than real property, that is of a type customarily used for nongovernmental purposes and that has been sold, leased, or licensed to the general public; or, has been offered for sale, lease, or license to the general public; (2) Any item that evolved from an item described in paragraph (1) of this definition though advances in technology or performance and that is not yet available in the commercial marketplace, but will be available in the commercial marketplace in time to satisfy the delivery requirements under a government solicitation; (3) Any item that would satisfy a criterion expressed in paragraphs (1) or (2) of this definition, but for (i) Modifications of a type customarily available in the commercial marketplace; or (ii) Minor modifications of a type customarily available in the commercial marketplace made to meet federal government requirements. Minor modifications means modifications that do not significantly alter the nongovernmental function or essential physical characteristics of an item or component, or change the purpose of a process. Factors to be considered in determining whether a modification is minor include the value and size of the modification and the comparative value and size of the final product. Dollar values and percentages may be used as guideposts, but are not conclusive evidence that a modification is minor; (4) Any combination of items meeting the requirements of paragraphs (1), (2), (3), or (5) of this definition that are of a type customarily combined and sold in combination to the general public; (5) Installation

services, maintenance services, repair services, training services, and other services if such services are procured for support of an item referred to in paragraphs (1), (2), (3), or (4) of this definition, and if the source of such services (i) Offers such services to the general public and the federal government contemporaneously and under similar terms and conditions; and (ii) offers to use the same work force for providing the federal government with such services as the source uses for providing such services to the general public; (6) Services of a type offered and sold competitively in substantial quantities in the commercial marketplace based on established catalog or market prices for specific tasks performed under standard commercial terms and conditions. This does not include services that are sold based on hourly rates without an established catalog or market price for a specific service performed; (7) Any item, combination of items, or service referred to in paragraphs (1) through (6) of this definition, notwithstanding the fact that the item, combination of items, or service is transferred between or among separate divisions, subsidiaries, or affiliates of a contractor; or (8) A nondevelopmental item, if the procuring agency determines the item was developed exclusively at private expense and sold in substantial quantities, on a competitive basis, to multiple state and local governments.

compliance impact, *n*—a consequence of loss of control characterized by negative compliance with applicable laws, regulations, or other relevant internal or external guidance that does not rise to the level of an operational impact. **E2608**

compliance impact, *n*—consequence of loss of control characterized by negative compliance with applicable laws, regulations, or other relevant internal or external guidance that does not rise to the level of an operational impact. **E2674**

component, *n*—a part of a mechanical or electrical complex. **E2607**

component (financial), *n*—a tangible part or portion of PP&E that (1) can be separately identified as an asset and depreciated or amortized over its own separate expected useful life and (2) is expected to provide economic benefit for more than one year.

composite depreciation, *n*—group depreciation of dissimilar assets with different service lives. Depreciation on all assets is determined by using the straight-line-depreciation method. Then, a composite depreciation rate is arrived at based on the ratio of depreciation per year to the original cost. Composite life equals the depreciable cost divided by the depreciation per year. In any given year, depreciation expense equals the composite depreciation rate times the gross cost balance in the asset account. The entry is to debit depreciation expense and credit accumulated depreciation. Under the method, when a particular asset is sold, the entry is to debit cash for the amount received and credit the asset for its original cost. The difference between the two is debited to accumulated depreciation. No gain or loss on the sale of a fixed asset is recognized under the composite method.

computer software, *n*—computer programs, computer data bases, and related documentation.

condition, *n*—the physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness. Evaluating an asset's condition requires knowledge of the asset, its performance capacity and its actual ability to perform, and expectations for its continued performance. The condition of a long-lived asset is affected by its durability, the quality of its design and construction, its use, the adequacy of maintenance that has been performed, and many other factors, including: accidents (an unforeseen and unplanned or unexpected event or circumstance), catastrophes (a tragic event), disasters (a sudden calamitous event bringing great damage, loss, or destruction), and obsolescence.

condition assessment surveys, *n*—periodic inspections of PP&E to determine their current condition and estimated cost to correct any deficiencies.

condition code, *n*—a symbol that signifies the physical operating condition of property.

confidence level, *n*—a statistical measure of the amount of reliability that a random statistical sample represents the entire population. **E2936**

consequence, *n*—the effect of actions (something that logically or naturally follows from an action or condition). **E2674**

consignment, *n*—specialized way of marketing certain types of goods. The consignor delivers goods to the consignee who acts as the consignor's agent in selling the merchandise to a third party. The consignee accepts the goods without any liability except to reasonably protect them from damage. The consignee receives a commission when the merchandise is sold. Goods on consignment are included in the consignor's inventory and excluded from the consignee's inventory since the consignor has legal title.

construction in progress, *n*—an inventory account used to accumulate the construction costs of the contract project. For the percentage-of-completion method, the CIP account also includes the gross profit earned to date.

constructive custody, *n*—legal possession of property by federal government personnel through a non-federal agent, such as a commercial contractor or state or local official, under a legal agreement or court order that the agent maintains physical possession and control of the property on behalf of, and subject to the orders of, the federal government personnel.

consumed, *n*—the loss of identity of an item by incorporation into a higher assembly or through use and ultimate disappearance as a known item or substance.

consumption—(1) the process of incorporating material into an end item or otherwise using it in the performance of a documented business objective. (2) The measurement of actual use of consumable items against planned use.

consumption method, *n*—a method of accounting for goods, such as materials and supplies, where the goods are recognized as assets upon acquisition and are expensed as they are consumed.

containment, *n*—the level of control characterized by process or electronic methods of assuring equipment items are contained within a designated area. **E2608**

contingent rentals, *n*—rentals that represent allowing the lessee the option to renew the lease agreement for a rental payment sufficiently lower than the expected fair rental of the property at the date the option becomes exercisable. Exercise of the option must appear reasonably assured at the inception of the lease. However, changes due to the pass-through of increases in the construction or acquisition cost of the leased property or for increases in some measure of cost during the construction or pre-construction period should be excluded from contingent rentals. Also, provisions that are dependent only upon the passage of time should be excluded from contingent rentals. A lease payment that is based upon an existing index or rate, such as the consumer price index or the prime rate, is a contingent payment, and the computation of the minimum lease payments should be based upon the index or rate applicable at the inception of the lease.

continuous control, *n*—real time tracking and control with either human or electronic monitoring and surveillance at all times. **E2608**

continuous control while mobile, *n*—real time tracking and control with either human or electronic monitoring and surveillance at any time the equipment is not stationary in a secure, fixed location. **E2608**

continuous inventory method, *n*—the perpetual inventory method.

contra account, *n*—(1) reduction to the gross cost of an asset to arrive at its net cost; also called *valuation allowance*. For example, accumulated depreciation is a contra account to the original cost of a fixed asset to arrive at book value. (2) Reduction of a liability to arrive at its carrying value. An example is bond discount, which is a reduction of bonds payable.

contract, *n*—agreement creating obligations enforceable by law. [<http://www.law.cornell.edu/wex/contract>]

contracting, *n*—purchasing, renting, leasing, or otherwise obtaining supplies or services from non-federal sources. Contracting includes description (but not determination) of supplies and services required, selection and solicitation of sources, preparation and award of contracts, and all phases of contract administration. It does not include making grants or cooperative agreements.

contractor inventory, *n*—(1) any property acquired by and in the possession of a contractor or subcontractor under a contract pursuant to the terms of which title is vested in the government, and in excess of the amounts needed to complete full performance under the entire contract; and (2) any property which the government is obligated or has the option

to take over under any type of contract as a result either of any changes in the specifications or plans thereunder or of the termination of such contract (or subcontract thereunder), prior to completion of the work, for the convenience or at the option of the government.

contractor self assessment (CSA), *n*—an auditing, assessment, review or surveillance program implemented by a contractor to identify, evaluate and take corrective action on compliance and operational risks resulting from business practices for government property management. **E2936**

controllability, *n*—extent to which a manager can influence activities. Managerial performance theoretically should be evaluated only on the basis of those factors controlled by the manager. Thus, managers may control revenues, costs, or investment in resources. For example, a controllable cost is one that is directly regulated by a specific manager at a given level of production within a given time span. However, controllability and responsibility are rarely coextensive. One reason is that more than one manager may influence an activity.

controlled substances, *n*—(1) narcotic, depressant, stimulant, or hallucinogenic drug or substance; (2) any other drug or substance controlled under Title II of the Comprehensive Drug Abuse Prevention and Control Act of 1970; or (3) a drug or substance required to be controlled by international treaty, convention, or protocol.

corrective maintenance, *n*—maintenance required to return property to such condition that it may be effectively utilized for its designated purpose.

corrective maintenance, *n*—maintenance required to return property to such condition that it may be effectively utilized for its designated purpose.

cost objective, *n*—a function, organizational subdivision, contract or other work unit for which cost data are desired and for which provision is made to accumulate and measure the cost of processes, products, jobs, capitalized projects, etc.

cost of capital, *n*—rate of return that is necessary to maintain market value (or stock price) of a firm, also called a *hurdle rate*, *cutoff rate*, or *minimum required rate of return*. The firm's cost of capital is calculated as a weighted average of the costs of debt and equity funds. Equity funds include both capital stock (common stock and preferred stock) and retained earnings. These costs are expressed as annual percentage rates. For example, assume the following capital structure and the cost of each source of financing for the XYZ Company: REVIEW.

cost of capital committed to facilities, *n*—an imputed cost determined by applying a cost of money rate to facilities capital.

cost of goods manufactured, *n*—the sum of all costs allocated to products completed during a period; includes materials, labor, and overhead.

cost of goods purchased, *n*—net purchase price of goods acquired plus costs of storage and delivery to the place where the items can be productively used.

cost of goods sold, *n*—inventoriable costs that are expensed because the units are sold; equals beginning inventory plus cost of goods purchased or manufactured minus ending inventory.

cost of sales, *n*—generally refers to cost of goods sold; occasionally, to selling expenses.

critical defect, *n*—a significant and systemic defect that would have a material effect on contract performance or cause concern for the reliability of the information provided by the property management system. **E2936**

current value, *n*—term for an asset shown at its present worth. Some measures that can be used are current cost, current exit value, and present value.

custodial agency, *n*—the federal agency that has actual possession of seized or forfeited property, or constructive possession of property through a non-federal agent. The custodial agency would be responsible for reporting material quantities of non-valued items.

custodial records, *n*—memoranda in any form written or electronic that documents the life cycle of property.

custody, *n*—having charge and control; to be in possession of.

customer, *n*—for customer furnished property arrangements, the customer is generally considered the entity or decision maker that has issued a contract or subcontract.

DISCUSSION—The customer may be the issuer of the original contact or may be a prime contractor to a subcontractor. Synonyms may include: buyer, purchaser, contracting officer and client. Customers have authority to issue and make determinations, commitments and administer a contact or subcontractor and are limited to those individuals who have delegated authority by the asset's owner. Lessors are not customers. Not all employees of an entity are customers as they do not have delegated authority to make determinations and commitments on behalf of the entity, for example, auditors who are working in an auditor capacity that require independence. **E3015**

customer-owned property, *n*—property owned by a customer.

DISCUSSION—If an entity receives a government contract and is required, by contract, to be furnished property to complete the work—this is defined as customer-owned or customer furnished. This may include property that is subsequently furnished to suppliers and subcontractors. Those who are furnished this property generally refer to this property as customer-furnished property or customer-owned property. **E3015**

customer support, *n*—services performed by an enterprise to assist customers in their use of software products. Those services include any installation assistance, training classes, telephone question and answer services, newsletters, on-site visits, and software or data modifications.

data base, *n*—storehouse of related data records independently managed apart from any specific program or information system application. It is than made available to a wide variety of individuals and systems within the organization. In essence, it is an electronic filing cabinet providing a

common core of information accessible by a program. An example is a data base of inventory items.

data element, *n*—an individual fact collected to populate information for the equipment record source. **E2812, E2604**

defect, *n*—condition in which a functional segment, a sample item, or sample item element of a property control system contains one or more deficiencies.

deferred maintenance, *n*—maintenance that was not performed when it should have been or was scheduled to be and which, therefore, is put off or delayed for a future period.

delivery order, *n*—an order for supplies places against an established contract or with government sources.

demilitarization, *n*—the act of destroying the offensive or defensive characteristics of equipment or material to prevent its further military or lethal use.

demolition costs, *n*—costs, net of recoveries (such as the sale of scrap metal), incurred to demolish and remove existing PP&E. Demolition costs do not include the net book value of existing PP&E that is to be abandoned and demolished.

depletion, *n*—physical exhaustion of a natural resource (for example, oil, coal). The entry for recording annual depletion is to debit depletion expense and credit accumulated depletion. Accumulated depletion is a contra account to the natural resource.

depreciable asset, *n*—certain types of assets (for example, plant and equipment) that gradually lose their value over time. The law permits depreciation charges except when such assets are held by individuals as personal property.

depreciable cost, *n*—fixed asset cost that is subject to depreciation. Depreciable cost equals acquisition cost less salvage value.

depreciable life, *n*—economic or physical life of a fixed asset. Fixed assets except land are subject to depreciate over the number of years of expected use.

depreciation, *n*—the annual charge to income that results from a systematic and rational allocation of costs over the life of a tangible asset.

depreciation expense, *n*—deducted by a business on its federal income tax return. The depreciation amount on the tax return, however, may differ from the amount reported in the firm's income statement. In fact, the method used on the tax return need not be the same method used in the financial statements. Accelerated cost recovery system (ACRS) is a system that allows a specific accelerated write-off pattern of the asset for tax purposes.

discrepancies incident to shipment, *n*—all deficiencies incident to shipment of property to or from an organization's facility whereby differences exist between the property purported to have been shipped and property actually received. Such deficiencies include loss, damage, destruction, improper status and condition coding, errors in identity or classification, and improper consignment.

disposal, *n*—the processes involved in the removal of personal property from the property accounting system after assignment for utilization, donation, sale, abandonment, or destruction. **E2306**

donations, *n*—direct transfer of title of surplus property to eligible donees and other specifically designated recipients. **E2306**

dunnage, *n*—lumber or other material used to brace and secure cargo to prevent damage.

end item, *n*—deliverable or product.

end user, *n*—one that has been provided property, and exercises the right to use it.

ending inventory, *n*—goods on hand at the end of the accounting period. Ending inventory is normally shown on the income statement in the calculation of cost of goods sold and is reflected on the balance sheet.

entity, *n*—agency, company, organization, or institution. **E2452**

entity, *n*—agency, company, organization, or institution. **E2495**

entity, *n*—agency, company, organization, or institution. **E2607**

entity owned—property owned by an entity.

DISCUSSION—If entity (ZXY Corporation) is in the business of selling commercial products and needs to provide owned property to a supplier to do work, this is entity (XYZ Corporation) owned property from the perspective of the owner, but is customer-owned property from the perspective of the supplier. **E3015**

equipment, *n*—non-expendable, tangible moveable property needed for the performance of a task or useful in effecting an obligation.

equipment control classes (ECCs), *n*—five classifications or groupings of equipment based on the consequences of the loss of control of the equipment. **E2608**

equipment control classes (ECCs), *n*—classifications or groupings of equipment based on the consequences of the loss of control of the equipment. **E2674**

equipment control levels (ECLs), *n*—five levels of control of equipment based on differentiated tracking specifications. **E2608**

equipment control matrix (ECM), *n*—the relationships between the ECCs and the ECLs. **E2608**

equipment management, *n*—systematic planning and control of equipment to optimize its service delivery potential and the management of associated risks and costs throughout its life-cycle in support of organizational objectives. This includes the process management and operations of acquisition or construction of the equipment; its operation, maintenance, and modification while in use; and its disposal when no longer required. **E2452**

equipment management, *n*—systematic planning and control of equipment to optimize its service delivery potential; the management of associated risks and costs throughout its lifecycle in support of organizational objectives; the process management and operations of acquisition or construction of the equipment and its use, maintenance, and modification and its disposal when no longer required. **E2495**

estimated residual value of leased property, *n*—the estimated fair value of the leased property at the end of the lease term.

event tracking, *n*—the level of control characterized by manual or electronic recording of movement, accountability, or stewardship changes. **E2608**

excess, *n*—personal property that is no longer required by a program of an owning organization. **E2306**

excess capacity, *n*—the difference of full capacity less current operating capacity.

excess equipment, *n*—equipment no longer required by the entity holding title. **E2607**

excess property, *n*—property no longer required.

expected useful life, *n*—period of time over which an item of PP&E is expected to provide economic benefits to an entity. In the determination of expected useful life, it is presumed that an entity will perform normal, ongoing, or periodic maintenance activities on that PP&E. For leased PP&E, expected useful life should be determined in accordance with FASB Statement No. 13, Accounting for Leases.

expendable, *n*—property that can be consumed or become scrap as a result of intended use like drill bits and sanding wheels.

fabricated, *n*—assembled or built.

facilities capital, *n*—means the net book value of tangible capital assets and of those intangible capital assets that are subject to amortization.

fair market value, *n*—amount that could be received on the sale of an asset when willing and financially capable buyers and sellers exist and there are no unusual circumstances such as liquidation, shortages, and emergencies.

fair value, *n*—is the amount at which the asset (liability) could be bought (incurred) or sold (settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. However, in many instances, quote market prices in active markets will not be available for the long-lived assets (asset groups) covered by this statement. In those instances, the estimate of fair value shall be based on the best information available, including prices for similar assets (groups) and the results of using other valuation techniques.

federal acquisition regulation (FAR), *n*—the primary regulation for use by Federal Executive Agencies in their acquisition of supplies and services with appropriated funds. **E2936**

federal agency, *n*—any department, agency, office, or other independent establishment of the government.

fiduciary, *n*—individual or institution responsible for holding or administering property owned by another. An executor, guardian, trustee, and administrator are examples of a fiduciary.

fiduciary accounting, *n*—proper accounting for property by a fiduciary, custodian, or third party obligated to act consistently with the conditions set forth in a binding instrument such as an agreement, contract, or deed.

financing lease, *n*—a capital lease.

first article, *n*—preproduction models, initial production samples, test samples, first lots, or pilot samples submitted for testing and evaluation for conformance with specified contract requirements before or in the initial stages of production.

fleet, *n*—any group of ships, motor vehicles, trucks, buses, airplanes, etc., acting together or under one control.

F.O.B. destination, *n*—means free on board at destination; that is, the seller or consignor delivers the good on seller's or consignor's conveyance at destination. Unless the contract provides otherwise, the seller or consignor is responsible for the cost of shipping and risk of loss.

F.O.B. origin, *n*—means free on board at origin; that is, the seller or consignor places the goods on the conveyance. Unless the contract provides otherwise, the buyer or consignee is responsible for the cost of shipping and risk of loss.

furnished property, *n*—property actually furnished to but not paid for by a supplier, contractor or subcontractor within the contractual arrangement. This guide does not include controls specifically for items sent in for repair, modification, or upgrade under service agreements. **E3015**

gain, *n*—excess of money or fair value of property received on sale or exchange over the carrying value of the item. An example is the sale of a fixed asset when cash received exceeds book value. Gains also occur when the cash payment to eliminate a debt is less than the liability's carrying value. An example is retiring debt before maturity at a price below book value. Gains relate to incidental and nonrecurring transactions of the business.

government property management system, *n*—the plans, processes, procedures, information systems, human and physical resources used to manage government property accountable to a contract. **E2936**

hardware, *n*—physical components or apparatus, including major items of equipment.

hazardous material, *n*—any used or unused personal property, including scrap and waste, that is ignitable, corrosive, reactive, or toxic because of its quantity, concentration, or physical, chemical, or infectious characteristics. The property can be in a solid, liquid, semi-liquid, or contained gas form and may cause or significantly contribute to an increase

in mortality or serious illness, or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

identification, *n*—the physical marking of property or, in some cases, its container, by which one or more of the following can be ascertained: ownership, classification, part, serial, model, description, contract, or unique organization designation.

inconsistency measure, *n*—inconsistent scoring within a square matrix using a predefined interval scale, for example, rating all comparisons high thus disturbing the logic of the matrix. **E2495**

information management, *n*—collection and management of information from one or more sources and the distribution of that information to one or more audiences. **E2675**

intangible property, *n*—property that is not itself intrinsically valuable, but that derives its value from what it represents or evidences, for example, goodwill, knowledge derived from study, experience, or instruction, or knowledge of a specific event or situation.

internal controls, *n*—organization's business system of internal control designed to provide reasonable assurance of achieving: (1) effective and efficient operations (E&EO), (2) reliable reporting (RR), including financial and performance, and (3) compliance with applicable laws and regulations (CLR). **[Adapted from GAO-12-331G]**

DISCUSSION—The framework and elements of internal controls have remained fairly consistent for operational, accounting, and auditing purposes over the years and generally apply internationally. In the United States, internal control requirements apply to publicly traded corporations as well as U.S. Government operations. For publicly traded corporations the requirements for internal controls is included in the: Securities Exchange Act of 1934;⁹ Sarbanes Oxley Act of 2002;⁹ and the Committee of Sponsoring Organizations of the Treadway Commission (COSO) publication, *Internal Control—Integrated Framework* (2013).¹⁰ For the U.S. Federal Government operations, guidance and contractual requirements are included in OMB Circular A-123, Management's Responsibility for Internal Control; and the Federal Acquisition Regulation (FAR) Part 45 and the associated Clause 52.245-1 Government Property, under Paragraph (b) Property Management. Other standards for international applicability include International Auditing and Assurance Standards Board (IAASB) and International Standard on Assurance Engagements (ISAE) 3402. Internal controls in business operations are analogous to "vital signs" in the medical field—it is the starting point, providing the fundamental indicators of good health.

interval scale, *n*—standard survey rating scale, based on real numbers, in which distances between data points are meaningful. **E2495**

judgment sampling, *n*—the process by which a number of items or areas are selected from the population for analysis without meeting standard random selection and sample size criteria.

⁹ Available from U.S. Securities Exchange Commission, 100 F Street, NE, Washington, DC 20549, <http://www.sec.gov>.

¹⁰ Committee of Sponsoring Organizations of the Treadway Commission (COSO), *Internal Control—Integrated Framework*, AICPA, Durham, NC, 2013.

- lease**, *n*—grant or rights by a lessor to a lessee to possess and use real or personal property for a period of time in exchange for rent or other consideration.
- life-cycle cost (LCC)**, *n*—sum of all known material costs associated with an item or group of items and these costs include not only the acquisition value, but also all activities related to an item from acquisition through utilization and disposition. Sometimes referred to as **total cost of ownership (TCO)**. **E2453**
- life cycle processes (LCP)**—the various management and control stages of property from its acquisition through disposition; these processes include but not limited to acquisition, receiving, identification, records, movement, maintenance, storage, physical inventory, loss damage, and destruction reporting and disposition. **E2811**
- line item**, *n*—a single line entry on a reporting form that indicates a quantity of property having the same description.
- lot**, *n*—an aggregation of documents, records, articles, or actions selected for review due to common characteristics; often used in sales. For evaluation of the lot, all characteristics for which a lot is tested must be common to all units within the lot. Also referred to as universe or population.
- lotting, lotted**, *v*—to consolidate or distribute assets being sold into identifiable groupings, to be sold for one price, to provide the best number of items or the best mix of different items with the intent to increase prospective bidder interest.
- low risk property (LRP)**—assets that are monitored and controlled at the discretion of asset managers and typically consist of low risk expendables or durable equipment and tooling based on established and disclosed criteria. **E2811**
- maintenance**, *n*— (1) the act of maintaining by keeping in an existing state and preserving from failure or decline; (2) person, place, or thing that maintains; (3) the upkeep of property or equipment.
- major defect**, *n*—a significant, but not systemic defect that may affect the control of government property, possibly increasing the risk to the Government. **E2936**
- manifest**, *n*—a document specifying, in detail, the items carried on a transportation conveyance for a specific destination.
- material**, *n*—moveable property that may consumed or expended.
- material requirements list**, *n*—a type of bill of material used in material requirements planning systems.
- methodology**, *n*—a set or system of methods, principles and rules for regulating a given discipline. **E2936**
- minor defect**, *n*—a defect that is administrative in nature, non-systemic and would have no material outcome for the control of Government property. **E2936**
- motor vehicles**, *n*—motor vehicles are non-tactical; usually operated by a driver but may be remotely or autonomously controlled; owned or leased in both the public and private sectors; may include both light and heavy duty assets; and, operate either on- or off-road. **E2962**
- moveable property**, *n*—tangible property, other than real property or tangible intellectual property, that is transportable and visible.
- movement document**, *n*—any document used to move tangible property, that is, shipping, transfer, or receipt document. **E2606**
- notification**, *n*—a documented means of delivering a message to a specific recipient. **E2606**
- operational impact**, *n*—a consequence of loss of control characterized by negative operational impact that does not rise to the level of a personal or societal safety or security impact. **E2608**
- operational impact**, *n*—consequence of loss of control characterized by negative operational impact that does not rise to the level of a personal or societal safety or security impact. **E2674**
- operations**, *n*—exercise of the tasks that constitute equipment management. **E2452**
- operations**, *n*—exercise of the tasks that constitute equipment management. **E2675**
- operator maintenance**, *n*—maintenance tasks of a minor nature, including preventative maintenance, performed by equipment operators at the most convenient time, whether it is before, during or after operations.
- opportunity**, *n*—concept that denotes a potential positive impact. **E2675**
- opportunity assessment**, *n*—assessing external conditions that are helpful to achieving objectives. **E2675**
- opportunity management**, *n*—managing external conditions that are helpful to achieving objectives. **E2675**
- organizational impact**, *n*—objects that affect or influence the capability of an entity, especially in a significant or undesirable manner. **E2674**
- outcome**, *n*—information, event, object, or state of being produced as a result or consequence of a plan, process, accident, effort, or other similar action or occurrence. **E2675**
- outcome measure**, *n*—an assessment of the results of a program activity compared to its intended purpose. **E2675**
- output measure**, *n*—the tabulation, calculation, or recording of activity or effort and can be expressed in a quantitative or qualitative manner. **E2675**
- owner**, *n*—one who has the legal or rightful title to property.
- personal property**, *n*—tangible property other than land; in law, the tangible, movable property of an individual, exclusive of land and including items such as automotive vehicles, boats, and money. **E2453**

personal safety/security consequence, *n*—a consequence of loss of control characterized by negative personal safety or security impact that does not rise to the level of a societal safety or security impact. **E2608**

personal safety/security consequence, *n*—consequence of loss of control characterized by negative personal safety or security impact that does not rise to the level of a societal safety or security impact. **E2674**

physical inventory, *n*—the verification of the existence, location, and quantity of property items. The process may involve verifying additional property information.

pool, *n*—a sharing arrangement for a group of property with a common purpose.

population, *n*—for purposes of auditing a contract property management system using statistical sampling, a population may consist of a collection of assets, inventory, records, documents, locations, actions or transactions that have common characteristics for the process undergoing audit. **E2936**

practice, *n*—a definitive set of instructions for performing one or more specific operations that does not produce a test result. **E2452**

preventative maintenance, *n*—regularly scheduled periodic maintenance activities (within a year) on selected equipment that typically includes inspection, lubrication, and minor adjustment. **E2453**

prime contractor, *n*—contractor that has issued one or more subcontracts.

DISCUSSION—The prime contractor is frequently referred to as the “buyer” or “customer” by the subcontractor. From the perspective of a subcontractor, the prime contractor is the entity with whom the subcontractor is directly engaged in a subcontract. There are numerous variations to this relationship, for example, a prime contractor may, in turn, be a subcontractor to another entity, which would then be that subcontractor’s prime contractor. In another context, the prime contractor may refer to the contractor that holds the direct contract with the ultimate customer. **E3015**

probability, *n*—or chance that something is the case or will happen. **E2674**

process management, *n*—planning and administering the activities necessary to achieve a desired level of performance and identifying opportunities for improving quality, operational performance, and ultimately, customer satisfaction. **E2675**

property, *n*—something or a number of things in which one has the rights and interests subject to ownership. It includes both tangible property and intangible property.

property, *n*—something or a number of things in which one has the rights and interests subject to ownership including both tangible and intangible property. **E2453**

property control function, *n*—a business unit within an organization that is responsible for defining, implementing, and maintaining an infrastructure and related processes that

ensure the adequate control, protection, preservation, and maintenance of the organization’s property.

property control system, *n*—an entity’s internal management program for protecting, preserving, accounting for, and controlling property from acquisition through disposition, including both application and compliance.

property custodian, *n*—an individual or organization accountable for property.

property functionality, *n*—set of functions that an asset is able or equipped to perform. **E2675**

property management, *n*—a monitoring and control function, charged with assuring that organizational processes related to the lifecycle management of property support organization objectives, represent sound business practice, and are compliant with applicable standards, policies, regulations, and contractual requirements.

property management system, *n*—a subset of existing organizational processes related to the lifecycle management of property. These processes represent sound practice and are compliant with applicable standards, policies, regulations, and contractual requirements.

property manager, *n*—the individual designated by the organization to provide leadership to the organization in the management and use of assets.

property records, *n*—information retained for use in managing property.

property records, *n*—information retained for managing property. **E2221**

property responsibility, *n*—obligations of a person or entity for actions related to property such as maintenance, control, and record-keeping. More general than accountability.

property system function, *n*—a major portion of a property control system. Examples include property management, acquisition, receiving, identification, records, movement, storage, physical inventories, reports, consumption, utilization, maintenance, subcontractor or alternate location control, and disposition.

property system functional segment, *n*—a portion of a property system function of property control that may be separately identified and contains similar properties, procedures, and conditions of control that can be isolated for purpose of analysis.

purposive sampling, *v*—the act of selecting specific items for audit or review purposes based on prior knowledge of a situation, usually to identify casual factors or progress in rectification of a prior problem. **E2936**

real property, *n*—land and rights in land, ground improvements, utility distribution systems, and buildings and other structures, including any fixtures permanently installed therein. Real property is tangible property other than moveable property or tangible intellectual property.

reasonable assurance, *n*—management’s assessment or opinion regarding the effectiveness of internal controls relating to effective and efficient operations, reliable reporting, and compliance to laws and regulations. [Adapted from Paragraph 17 of the PCAOB Auditing Standard No. 2]

DISCUSSION—Reasonable assurance includes the understanding there is a remote likelihood that material misstatements or occurrences will not be prevented or detected on a timely basis. Although not absolute assurance, reasonable assurance is, nevertheless, a high level of assurance.

receiving, *v*—the process of accepting incoming property into an entity’s control. It includes verification, identification, and recording of incoming property. **E2606**

reclamation, *n*—removal of serviceable components from excess equipment. **E2607**

record, *n*—a collection of organized information in a regular structure, usually but not necessarily in a machine-readable format accessible by a computer. **E2812**

record utility, *n*—overall measure of structured property records based on the usefulness of stored, standardized, and appropriately available information of sufficient accuracy and reliability to respond reasonably to entity requirements in a timely manner. **E2675**

refurbish, *n*—to renovate or return property to, at, or near its original condition.

repair, *n*—to restore to a sound or good state after wear, partial destruction, or damage.

repairable, *n*—a state in which normal repair is reasonable from a standpoint of cost, accessibility, and technical involvement.

repairable item, *n*—an unserviceable item that can be reconditioned or economically repaired for reuse.

requirements determination, *n*—identifying needs for assets and materials through the planning process. Also may refer to identifying needs for a property or asset management system to help meet organizational goals and objectives.

residual, *n*—property remaining from a work effort for which no known requirement exists within that work effort.

residual value, *n*—the proceeds, less removal and disposal costs, if any, realized upon disposition of an asset. It usually is measured by the net proceeds from the sale or other disposition of the asset, or its fair value if the asset is traded in on another asset. The estimated residual value is a current forecast of the residual value.

resource optimization, *n*—property management system outcome characterized by the minimization of asset holdings while assuring entity requirements for assets are met. **E2675**

return on investment, *n*—earning power of assets measured as the ratio of the net income (profit less depreciation) to the average capital used (or equity capital) in a firm or project. **E2675**

risk, *n*—concept that denotes a potential negative impact. **E2674**

risk, *n*—concept that denotes a potential negative impact. **E2675**

risk assessment, *n*—determination of the quantitative or qualitative value of risk related to a concrete situation and a recognized threat. **E2674**

risk assessment, *n*—determination of quantitative or qualitative value of risk related to a concrete situation and a recognized threat. **E2675**

risk management, *n*—structured approach to managing uncertainty through risk assessment, developing strategies to manage it, and mitigation of risk using managerial resources. **E2674**

risk management, *n*—structured approach to managing uncertainty through risk assessment, developing strategies to manage it, and mitigation of risk using managerial resources. **E2675**

sale, *n*—a method of disposing of surplus personal property, by the organization or under the direction of another authorized source, where interest or ownership in the property is exchanged for monetary reimbursement that is retained by the owning organization. **E2306**

salvage, *n*—property that has no reasonable prospect of sale or use as serviceable property without major repairs, but has some value in excess of its scrap value.

sample, *n*—a number of items, for example, documents, records, articles, or actions selected from a lot for a review in order to draw inferences regarding to the status of the lot.

sample item, *n*—a single document, record, article, or action from the sample.

sample item element, *n*—a single element from a sample item subject to evaluation, for example, name or nomenclature, description, national stock number, quantity received, quantity issued, balance on hand, etc.

scrap, *n*—excess property that has no value except for its basic material content.

screen, *v*—to review or compare property on hand against a known or anticipated requirement.

screening period, *n*—the period in which excess and surplus personal property are made available for transfer or donation to eligible recipients. **E2306**

sensitive items, *n*—items for which, regardless of value, there is a reasonable need for extraordinary security, accountability, and control.

societal safety/security consequence, *n*—a consequence of loss of control characterized by negative societal safety or security impact. **E2608**

societal safety/security consequence, *n*—consequence of loss of control characterized by negative societal safety or security impact. **E2674**

source document, *n*—a document, paper or electronic, that serves as a basis for posting information to the records of property to provide an auditable record of all transactions, evidencing acquisition, receipt, consumption, utilization, maintenance, physical inventory, and disposition. Examples include purchase or fabrication order, receiving report, stores requisition, record of equipment usage, record of maintenance performed, inventory ticket, and shipping documentation.

spares, *n*—pieces of property that duplicate existing items but which are designed as replacements, as required, and are normally kept in reserve.

standards, *n*—rules or bases of comparison used in judging capacity, quantity, content, extent, value, or quality; levels of excellence or attainment regarded as a measure of adequacy.

statistical sampling, *n*—the process by which a number of items are selected from the population for analysis so that the sample is representative of the entire population from which it was selected.

storage and warehousing, *n*—the activities related to receiving, storing, and shipping materials to and from production or distribution locations.

strategy, *n*—long-term plan of action designed to achieve a particular goal. **E2675**

subcontract, *n*—contract subordinate to another contract in which a party has contracted for the performance of certain work and, in turn, engages a third party to perform the whole or a part of that which is included in the original contract.

DISCUSSION—A subcontract may also be referred to as a “purchase order,” “purchase contract,” or “purchase agreement.” **E3015**

subcontractor, *n*—contractor that has engaged in a contract to perform a whole or a part of another contractor’s original contract.

DISCUSSION—Subcontractor may also be referred to as the “seller,” or “supplier.” **E3015**

surplus, *n*—personal property no longer required by the owning organization. **E2306**

sustainability, *n*—system of actions, projected to be viable on an ongoing basis. **E2675**

system level outcome, *n*—outcomes based on the policies, procedures, and tools that are in place to manage property, regardless of ownership. **E2675**

tactic, *n*—maneuver or action calculated to achieve some end. **E2675**

tagged property, *n*—property identified within an organization’s property control system that by its nature (value, sensitivity, special measure of control) qualifies to receive a unique tag, usually a barcode, for identification and tracking.

tangible intellectual property, *n*—tangible property that is intellectual in nature, including software, technical data, printed information, and legal documents (such as claims, debts, insurance policies, stock certificates, and evidence of indebtedness).

tangible property, *n*—property having physical existence and hence capable of being valued monetarily. Property other than intangible property.

terms and conditions, *n*—basis on which the sale, award, and transfer of the assets are to be conducted.

timely manner, *n*—within an agreement, the action to be taken by a specified date, or within a given or reasonable time frame. What is reasonable is determined by the decision making needs of the owner, the contracting parties, or other interested parties.

DISCUSSION—When a finite quantitative direction is not provided—a timely manner is subjective, circumstantial and reasonable—cost-benefit considerations apply. **E3015**

tooling—devices that are used in performing or facilitating mechanical operations, including assisting or aiding in the manufacture or repair of an item. **E2811**

total cost of ownership (TCO), *n*—analogous to LCC. **E2453**

use, *n*—when applied to material and property, engaging the asset or material into the business process for value.

utilization, *n*—the use of material or an asset in the business process.

valuation, *n*—the act of estimating the value or worth; assigning a value to an item.

work-in-process, *n*—material that has been released to manufacturing, engineering, design, or other services under the contract and includes undelivered manufactured parts, assemblies, and products, either complete or incomplete.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
