BSI Standards Publication

Leather — Physical and mechanical tests — Determination of resistance to horizontal spread of flame (ISO 17074:2006)

bsi.

...making excellence a habit.™

National foreword

This British Standard is the UK implementation of EN ISO 17074:2011. It is identical to ISO 17074:2006. It supersedes BS EN 14326:2003 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee TCI/69, Footwear, leather and coated fabrics.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

ISBN 978 0 580 72289 9

ICS 13.220.40; 59.140.30

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 30 September 2011.

Amendments issued since publication

ICS 59.140.30

Supersedes EN 14326:2003

English Version

Leather - Physical and mechanical tests - Determination of resistance to horizontal spread of flame (ISO 17074:2006)

Cuir - Essais physiques et mécaniques - Détermination de la résistance à la propagation horizontale de la flamme (ISO 17074:2006)

Leder - Physikalische und mechanische Prüfungen - Bestimmung der Widerstandsfähigkeit gegen die horizontale Ausbreitung von Flammen (ISO 17074:2006)

This European Standard was approved by CEN on 18 August 2011.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Ref. No. EN ISO 17074:2011: E

Foreword

The text of ISO 17074:2006 has been prepared by International Union of Leather Technologists and Chemists Societies and has been taken over as EN ISO 17074:2011 by Technical Committee CEN/TC 289 “Leather” the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 2012, and conflicting national standards shall be withdrawn at the latest by March 2012.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 14326:2003.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Endorsement notice

The text of ISO 17074:2006 has been approved by CEN as a EN ISO 17074:2011 without any modification.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 17074 was prepared by the Physical Test Commission of the International Union of Leather Technologists and Chemists Societies (IUP Commission, IULTCS) in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 289, *Leather*, the secretariat of which is held by UNI. It was published as EN 14326. It is based on IUP 47 published in *J. Soc. Leather Tech. Chem.*, **86** (7), p. 359, 2002, and declared an official method of the IULTCS in May 2003.

IULTCS, originally formed in 1897, is a world-wide organization of professional leather societies to further the advancement of leather science and technology. IULTCS has three Commissions, which are responsible for establishing international methods for the sampling and testing of leather. ISO recognizes IULTCS as an international standardizing body for the preparation of test methods for leather.

INTERNATIONAL STANDARD

ISO 17074:2006(E)
IULTCS/IUP 47:2006(E)

Leather — Physical and mechanical tests — Determination of resistance to horizontal spread of flame

1 Scope

This International Standard specifies a method for determining the horizontal burning rate of leather. It is applicable to all light leathers but is particularly intended for leathers used in the passenger compartment of motor vehicles.

NOTE The method uses the apparatus specified in ISO 3795 but incorporates special provisions for sampling, conditioning and testing of leather.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 2418, *Leather — Chemical, physical and mechanical and fastness tests — Sampling location*

ISO 2419, *Leather — Physical and mechanical tests — Sample preparation and conditioning*

ISO 2589, *Leather — Physical and mechanical tests — Determination of thickness*

ISO 3795:1989, *Road vehicles, and tractors and machinery for agriculture and forestry — Determination of burning behaviour of interior materials*

3 Principle

A test piece is held horizontally in a U-shaped holder and is exposed to a defined flame for a specified time with the flame acting on the free end of the test piece. The time is recorded for the flame to self-extinguish or to burn a measured distance.

4 Apparatus

4.1 **Combustion chamber**, as specified in 5.1 of ISO 3795:1989.

4.2 **Test piece holder**, as specified in 5.2 of ISO 3795:1989.

4.3 **Gas burner**, as specified in 5.3 of ISO 3795:1989.

4.4 **Test gas**, calorific value approximately 38 MJ/m^3, (e.g. natural gas).

4.5 **Stop watch**, reading to 0,5 s.

4.6 **Thickness gauge**, conforming to ISO 2589.

4.7 **Ruler**, reading to 1 mm.

4.8 **Fume cupboard**, as specified in 5.7 of ISO 3795:1989.

5 Sampling and sample preparation

5.1 Sample in accordance with ISO 2418.

5.2 Prepare three test pieces of the form and dimensions shown in Figure 1 with the long edge of the test piece being parallel to the backbone.

NOTE If there is a requirement for more than two hides or skins to be tested in one batch, then only one sample need be taken from each hide or skin, provided that the overall total is not less than three test pieces.

Dimensions in millimetres

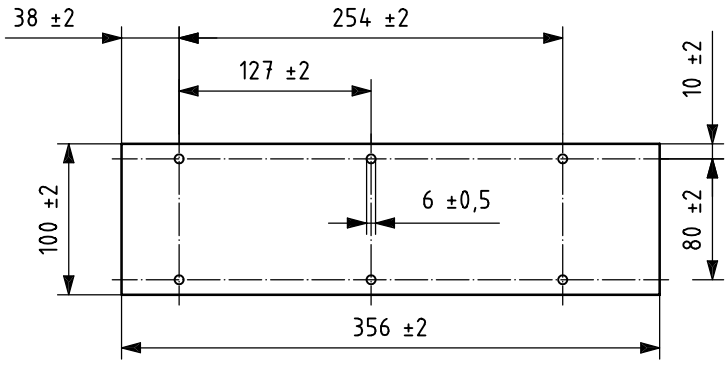

Figure 1 — Test piece

5.3 Condition the test pieces in accordance with ISO 2419. The test pieces should be maintained under these conditions until immediately prior to testing.

6 Procedure

6.1 Determine the thickness of the test piece in accordance with ISO 2589.

6.2 Place the test piece in the holder (4.2) so that the exposed side will be downwards to the flame.

6.3 Light the burner, close the air inlet and adjust the flame to a height of 38 mm ± 1 mm using the mark in the chamber (4.1). Allow the flame to burn for at least 5 min while the gas flow stabilises.

6.4 Push the test piece holder (4.2) into the combustion chamber (4.1) so that the left hand end of the test piece (Figure 1) is exposed to the flame. After 15,0 s ± 0,5 s, extinguish the flame by turning off the gas supply to the burner.

6.5 Allow any flame on the leather to propagate along the test piece, observing the flame on the side where the flame is burning faster.

6.6 Note the time when the foot of the flame passes the first measuring points which are the holes at the left hand end of the test piece in Figure 1. Allow the flame to continue and note the time when the flame reaches the last measuring points which are the holes at the right hand end of the test piece in Figure 1. If the flame self-extinguishes before reaching the last measuring point, note the time when it self-extinguishes.

6.7 Using the ruler (4.7), measure the burnt distance up from the first measuring point to either the last measuring point or the point where the flame self-extinguishes. Burnt distance is the decomposed part of the test piece, which is destroyed on its surface or in the interior by burning.

6.8 If the sample does not ignite, does not continue burning when the flame is removed or self-extinguishes before reaching the first measuring point, then the burning rate is 0 mm/min.

6.9 Allow the combustion chamber to cool to less than 30 °C before further tests are carried out.

7 Expression of results

Calculate the burning rate, B, in millimetres per minute, using the formula:

$$B = \frac{d \times 60}{t}$$

where

d is the burnt distance, in millimetres;

t is the time, in seconds, to burnt distance, d.

8 Test report

The test report shall include the following:

a) a reference to this International Standard, i.e. ISO 17074:2006;

b) the mean thickness of the test pieces;

c) the mean value of the burning rate in millimetres per minute (mm/min);

d) the standard atmosphere used for conditioning and testing as given in ISO 2419 (i.e. 20 °C/65 % RH, or 23 °C/50 % RH);

e) any deviations from the method specified in this International Standard;

f) full details for identification of the sample and any deviations from ISO 2418 with respect to sampling.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards -based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
