

# Test of adhesives for floor covering — Determination of the electrical resistance of adhesive films and composites

ICS 83.180

## National foreword

This British Standard is the UK implementation of EN 13415:2010. It supersedes BS EN 13415:2002 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PRI/52, Adhesives.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

**Compliance with a British Standard cannot confer immunity from legal obligations.**

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 31 January 2010

ICS 83.180

Supersedes EN 13415:2002

English Version

## Test of adhesives for floor covering - Determination of the electrical resistance of adhesive films and composites

Essai des adhésifs pour revêtements de sol -  
Détermination de la résistance électrique des composites  
et films d'adhésif

Prüfung von Klebstoffen für Bodenbeläge - Bestimmung  
des elektrischen Widerstandes von Klebstoff-Filmen und  
Verbunden

This European Standard was approved by CEN on 28 November 2009.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

## Foreword

This document (EN 13415:2010) has been prepared by Technical Committee CEN/TC 193 “Adhesives”, the secretariat of which is held by AENOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2010, and conflicting national standards shall be withdrawn at the latest by July 2010.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 13415:2002.

**SAFETY STATEMENT** — Persons using this document should be familiar with the normal laboratory practice, if applicable. This document does not purport to address all of the safety problems, if any, associated with its use. It is the responsibility of the user to establish appropriate safety and health practices and to ensure compliance with any regulatory conditions.

**ENVIRONMENTAL STATEMENT** — It is understood that some of the material permitted in this standard may have negative environmental impact. As technological advantages lead to acceptable alternatives for these materials, they will be eliminated from this standard to the extent possible.

At the end of the test, the user of the standard should take care to carry out an appropriate disposal of the wastes, according to local regulation.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Croatia, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

## 1 Scope

This European Standard specifies a test method to measure the electrical resistance as a material physical parameter of an adhesive film and composites of floor covering material and adhesive film. The electrical resistance is reciprocal to the electrical conductivity. This laboratory method does not take account of all influences which may occur in practice.

In contrast to EN 1081, which applies to the determination of the electrical resistance of resilient floor coverings  $R_1$ ,  $R_2$  and  $R_3$  (see Clause 3), this method applies to the determination of the electrical resistance of adhesive films on glass and of composites of floor coverings, adhesively bonded to a fibre cement substrate  $R_4$  and  $R_5$  (see Clause 3).

## 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 923:2005+A1:2008, *Adhesives — Terms and definitions*

EN 1067, *Adhesives — Examination and preparation of samples for testing*

EN 1081:1998, *Resilient floor coverings — Determination of the electrical resistance*

EN ISO 9142, *Adhesives — Guide to the selection of standard laboratory ageing conditions for testing bonded joints (ISO 9142:2003)*

EN ISO 15605, *Adhesives — Sampling (ISO 15605:2000)*

ISO 554, *Standard atmospheres for conditioning and/or testing — Specifications*

## 3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 923:2005+A1:2008 and the following apply.

### 3.1 vertical resistance of floor covering

$R_1$   
electrical resistance, measured at an unbounded floor covering sample between the tripod electrode on the surface of the floor covering and a second electrode on the opposite underside

### 3.2 resistance to ground

$R_2$   
electrical resistance, measured at a bonded floor covering between a tripod electrodes on the surface of the floor covering and ground

### 3.3 point to point resistance

$R_3$   
electrical resistance measured on the surface of a bonded floor covering between two tripod electrodes in a distance of 100 mm

**3.4 adhesive resistance**

$R_4$

electrical resistance of a cured adhesive film, measured between two copper strips in a distance of 500 mm to each other

**3.5 vertical resistance of composite**

$R_5$

electrical resistance of a bonded floor covering, measured between a tripod electrode on the surface of the floor covering and a copper strip on the underside in a distance of 500 mm to each other

## 4 Apparatus and materials

**4.1 Glass plate**, dimensions: approximately 600 mm × 120 mm × 4 mm.

**4.2 Uncoated fibre cement panels**, fully compressed and autoclaved, asbestos free, with dimensions of approximately 750 mm × 300 mm × 6 mm.

**4.3 Adhesive applicator** with an opening of  $(1,0 \pm 0,1)$  mm height and a width of  $(100 \pm 1)$  mm (see Figure 1).

Dimensions in millimetres

**Figure 1 — Opening dimensions of the adhesive applicator**

**4.4 Adhesive trowel**, serrated blade with a notch size specified by the adhesive manufacturer.

**4.5 Three copper strips**, preferably self-adhesive, dimensions: approximately 120 mm x 10 mm x 0,08 mm.

**4.6 Conductive floor covering**, dimensions: approx. 700 mm x 250 mm.

**4.7 Roller**, of width  $(60 \pm 1)$  mm, diameter  $(95 \pm 1)$  mm and total mass  $(3,5 \pm 0,1)$  kg with handle at 90° to the axis (see Figure 2).

Dimensions in millimetres

Figure 2 — Roller

**4.8 Tripod electrode** in accordance with EN 1081:1998 (see EN 1081:1998, 5.1 and Figure 1).

**4.9 Load** able to apply at least 300 N to the tripod electrode.

**4.10 Resistance meter**, calibrated, with an accuracy of  $\pm 5\%$  for  $R$  values in the range of  $10^3 \Omega$  to  $10^{10} \Omega$ , and of  $\pm 10\%$  for more than  $10^{10} \Omega$ .

For resistances less than or equal to  $10^6 \Omega$  the open circuit voltage shall be 10 V d.c., for resistances greater than  $10^6 \Omega$  but not exceeding  $10^{10} \Omega$  it shall be 100 V and for resistances greater than  $10^{10} \Omega$  it shall be 500 V.

NOTE Recommended is a resistance meter with an inside resistance of 100 k $\Omega$  and an inside circuit according to IEC 60093:1980, A.2.2.

**4.11 Dry heat chamber**, ventilated and adjustable to a temperature between 20 °C and 200 °C according to EN ISO 9142.

## 5 Preparation of test specimens

### 5.1 Preparation of test specimens for determination of adhesive resistance $R_4$

The side of the glass plate (4.1) intended for applying the adhesive shall be free of grease, dust and other contamination.

Take a sample of the adhesive to be tested in accordance with EN ISO 15605, examine and prepare it for testing in accordance with EN 1067.

Two copper strips (4.5) shall be affixed ( $500 \pm 10$ ) mm away from each other in parallel to the shorter edges on the glass plate, making sure they protrude about 30 mm beyond the edge of the plate.

Apply adhesive to produce a uniform thickness of 1 mm. A sufficient quantity of adhesive shall be applied to the prepared surface on one shorter edge of the plate. The adhesive shall be spread evenly using the applicator in accordance with 4.3, in parallel to the longer edge glass plate (see Figure 3).

**Figure 3 — Arrangements of the copper strips**

## 5.2 Preparation of test specimens for determination of vertical resistance of composite $R_5$

The fibre cement panel (4.2) shall be likewise free of dust and other contamination, and before the adhesive is applied be conditioned for 120 h at ( $50 \pm 3$ ) °C in a dry-heat chamber (see 4.11) and reconditioned for at least 8 h at standard atmosphere 23/50 according to ISO 554.

Take a sample of the adhesive to be tested in accordance with EN ISO 15605, examine and prepare it for testing in accordance with EN 1067.

A copper strip (4.5) shall be affixed parallel to the shorter edge of the fibre cement panel at the end of the panel making sure it protrudes about 30 mm beyond the edge of the panel. A sufficient quantity of adhesive shall be applied to the prepared surface on one shorter edge of the plate. The adhesive shall be spread evenly using the applicator in accordance with 4.4, in a width of 200 mm in the middle and parallel to the longer edge of cement panel.

After the open time specified by the adhesive's producer, the conductive floor coverings (see 4.6) being tested shall be laid into the adhesive bed flush against one short side, just in the middle of the two long sides of the carrier slab, and rolled on using the roller (4.7) by rolling it evenly back and forth three times without additional pressure (see Figure 4).

Dimensions in millimetres

**Key**

- 1 Support (fibre cement panel)
- 2 Copper strip
- 3 Adhesive film covered with floor covering
- 4 Tripod electrode

**Figure 4 — Fibre cement panel with bonded floor covering**

## 6 Storing the specimens

### 6.1 Storing the specimens for determination of adhesive resistance $R_4$

The samples are stored as follows:

- a) ~ 24 h at standard atmosphere 23/50 according to ISO 554; plus
- b) 24 h at  $(40 \pm 3)^\circ\text{C}$  in a dry-heat chamber (see 4.11); plus
- c) 48 h at standard atmosphere 23/50 according to ISO 554.

### 6.2 Storing the specimens for determination of vertical resistance of composite $R_5$

The samples are stored as follows:

- a) ~ 24 h at standard atmosphere 23/50 according to ISO 554; plus
- b) 96 h at  $(40 \pm 3)^\circ\text{C}$  in a dry-heat chamber (see 4.11); plus
- c) 48 h at standard atmosphere 23/50 according to ISO 554.

## 7 Test procedure

### 7.1 General

The electrical resistances shall be measured following the storage period (6.1 and 6.2).

### 7.2 Adhesive resistances, $R_4$

The two copper strips are connected to the resistance meter (4.10).

Testing begins with 100 V test voltage, (15 ± 2) s after applying the test voltage the electrical resistance in ohms ( $\Omega$ ) shall be read. If the value exceeds  $10^{10} \Omega$ , the measuring shall be repeated with 500 V test voltage.

### 7.3 Vertical resistance of composite, $R_5$

The tripod electrode (see 4.8) is placed on the narrow side of the floor covering (see Figure 4) and loaded with at least 300 N. The electrode and the copper strip on the opposite underside are connected with the resistance meter. Testing begins with 10 V test voltage, (15 ± 2) s after applying the test voltage the electrical resistance in ohms ( $\Omega$ ) shall be read. If the value exceeds  $10^6 \Omega$  the measuring shall be repeated with 100 V test voltage. If the value exceeds  $10^{10} \Omega$  the final measuring shall be carried out with 500 V test voltage.

## 8 Test report

The test report shall include, at least, the following information:

- a) reference to this European Standard, i.e. EN 13415;
- b) designation and the adhesive batch number;
- c) designation of the floor covering;
- d) the conditioning sequences used;
- e) glass plate or fibre cement panel in accordance with 4.1 or 4.2;
- f) type of trowel used;
- g) open time in minutes (min);
- h) measuring electrodes used in accordance with 4.8;
- i) electrical resistance of the adhesive film  $R_4$  in ohms ( $\Omega$ );
- j) electrical resistance of composite  $R_5$  in ohms ( $\Omega$ );
- k) deviations from this standard;
- l) date of test.

## BSI - British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

### Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover. Tel: +44 (0)20 8996 9000. Fax: +44 (0)20 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

### Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: +44 (0)20 8996 9001. Fax: +44 (0)20 8996 7001 Email: [orders@bsigroup.com](mailto:orders@bsigroup.com) You may also buy directly using a debit/credit card from the BSI Shop on the Website <http://www.bsigroup.com/shop>

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

### Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact Information Centre. Tel: +44 (0)20 8996 7111 Fax: +44 (0)20 8996 7048 Email: [info@bsigroup.com](mailto:info@bsigroup.com)

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration. Tel: +44 (0)20 8996 7002 Fax: +44 (0)20 8996 7001 Email: [membership@bsigroup.com](mailto:membership@bsigroup.com)

Information regarding online access to British Standards via British Standards Online can be found at <http://www.bsigroup.com/BSOL>

Further information about BSI is available on the BSI website at <http://www.bsigroup.com>.

### Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.

Details and advice can be obtained from the Copyright and Licensing Manager. Tel: +44 (0)20 8996 7070 Email: [copyright@bsigroup.com](mailto:copyright@bsigroup.com)
