

Method of test for smoothing and/or levelling compounds — Determination of dimensional change

The European Standard EN 13872:2004 has the status of a
British Standard

ICS 91.100.99

National foreword

This British Standard is the official English language version of EN 13872:2004.

CEN letter of correction May 2004 made a correction to the title.

The UK participation in its preparation was entrusted to Technical Committee PRI/52, Adhesives, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 19 February 2004

Summary of pages

This document comprises a front cover, an inside front cover, the EN title page, pages 2 to 14, an inside back cover and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

EUROPEAN STANDARD

EN 13872

NORME EUROPÉENNE

EUROPÄISCHE NORM

February 2004

ICS 91.100.99

English version

Methods of test for hydraulic setting floor smoothing and/or levelling compounds - Determination of dimensional change

Méthode d'essai pour les mortiers de lissage et/ou d'égalisation à prise hydraulique - Détermination des variations des dimensions

Prüfverfahren für hydraulisch erhärtende Boden-Spachtelmassen - Bestimmung der Maßänderung

This European Standard was approved by CEN on 10 December 2003.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 13872:2004) has been prepared by Technical Committee CEN /TC 193, "Adhesives", the secretariat of which is held by AENOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by August 2004, and conflicting national standards shall be withdrawn at the latest by August 2004.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

1 Scope

This European Standard specifies the measurement of dimensional change of a hydraulic setting smoothing and/or levelling compound which is referred to in the following as "smoothing and/or levelling compound".

2 Normative references

This European Standard incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

EN 196-1, *Methods of testing cement - Part 1: Determination of strength*.

EN 1937:1999, *Test method for hydraulic setting floor smoothing and/or levelling compounds - Standard mixing procedures*

ISO 554, *Standard atmospheres for conditioning and/or testing - Specifications*.

3 Terms and definitions

For the purposes of this European Standard, the terms and definitions given in EN 1937:1999 and the following apply.

3.1 dimensional change

difference in length of a test specimen of a smoothing and/or levelling compound after specified time and conditions.

3.2 shrinkage

negative dimensional change.

3.3 expansion

positive dimensional change.

4 Principle

This test method is carried out to assess the shrinkage and expansion properties of smoothing and levelling compounds by measuring the dimensional changes in length of test specimens 10 mm x 40 mm x 160 mm at predetermined storage times and conditions.

5 Safety

The users of this standard shall be familiar with the normal laboratory practice.

This standard does not purport to address all safety problems, if any, associated with its use.

It is the responsibility of the user to establish safety and health practices and to ensure compliance with any European and national regulatory conditions.

6 Apparatus and material

6.1 Measuring apparatus for the determination of dimensional change, capable of measuring the test specimen with an accuracy of $\pm 0,005$ mm.

An example of a measuring device is shown in Figure 1 with a suitable cup and peg shown in Figure 2 and Figures 5 to 8 respectively. An alternative device is shown in Figure 3.

Key

- 1 locking device
- 2 holder

6.2 Moulds provided with internal dimensions $(10 \pm 0,5)$ mm width, $(40 \pm 0,5)$ mm depth and $(160 \pm 1,0)$ mm length to enable three test specimens to be prepared simultaneously;

either

- a) moulds with horizontal compartments 10 mm x 40 mm x 160 mm (see EN 196-1 in principle)
- or
- b) moulds in accordance with EN 196-1 with horizontal compartments 40 mm x 40 mm x 160 mm and width reducing plastic or metal inserts,

two for each mould.

If shape A or B measuring pegs are to be used, a hole shall be provided centrally in both ends of the mould (see Figure 4).

6.3 Jolting apparatus for testing a mixture of a smoothing and/or levelling compound with poor flow, a jolting apparatus in accordance with EN 196-1 may be used.

6.4 Measuring pegs either embedded in the test specimens or bonded securely on the ends after demoulding. They shall provide the contact between the test specimen and the measuring device.

The embedded pegs shall be designed to ensure that they remain secure whilst being removed from the mould.

The bonded pegs shall use a rapid setting structural adhesive also capable of with standing the 28 day water immersion test if required.

Examples of suitable measuring pegs are shown in Figures 5 to 8.

6.6 **Coverplate of glass**, plastic or other impermeable material of suitable dimensions to cover the mould.

6.7 **Smoothing and/or levelling compound** mixture in accordance with EN 1937.

7 Standard test conditions

The standard test atmosphere shall be $(23 \pm 2) ^\circ\text{C}$ and $(50 \pm 5) \%$ relative humidity in accordance with ISO 554.

8 Procedure

8.1 Preparation of the moulds

In assembling the cleaned mould ready for use, a suitable sealing material, such as butyl rubber putty, shall be used to coat the joints of the mould. A thin film of mould oil shall be applied to the internal faces of the mould.

Precondition the moulds for at least 24 h in the standard test atmosphere.

A minimum of three test specimens is required. The corresponding number of width reducing inserts, pegs, and covers as appropriate shall be prepared.

8.2 Test procedure

Measurements are carried out using the measuring devices as described in 6.1. Place the mould horizontally and, if required, insert the pegs according to 6.2.

Fill the mixture into the moulds immediately after mixing without any further treatment. If compacting is necessary, e.g. if the mixture does not flow sufficiently, use the jolting apparatus in accordance with EN 196-1. Remove the surplus of the mixture with a metal float in order to obtain completely filled moulds with an even surface. Cover the filled moulds with a cover plate in order to avoid preliminary drying of the specimen's surface. Store the filled moulds in the standard test conditions.

Remove the specimens from the moulds 24 h after mixing. If the shape "B" or "D" pegs are to be used immediately, bond them centrally on the ends of the test specimen. Insert the reference specimen in the measuring device using the spring force of the dial gauge and without additional pressure to locate the specimen. Set the gauge to zero.

Insert the specimen in the measuring device, rotate and note the length l_t . Reinsert the reference specimen.

If the values during rotation or between reference measurements exceeds 0,01 mm discard the result, check the cleanliness, fit and alignment of the specimen in the apparatus and repeat the test.

Record the initial length of l_t of the three specimens within 30 min following removal from the mould. Any time deviations to the procedure are to be noted in the report.

Store the specimens at least 20 mm apart on the area 10 mm x 160 mm in the standard test conditions on two non-corrodible round or triangular rods to enable free air circulation. Further measurements shall be carried out after 3, 7, 14 and 28 days after mixing (storage A).

8.3 Dimensional change after water immersion

Optional test: Following the 28 days in the standard test atmosphere, the test specimens may be immersed in clean water for a further 28 days and measured whilst wet (storage B).

The initial length is the length immediately prior to immersion, i. e. the 28 days measurement in 8.2.

NOTE The results of this test should not be used to imply water resistance because this is dependant on several other factors.

With the results note any samples which curl, twist or show other signs of distortion.

9 Evaluation and expression of results

Dimensional change of a test specimen shall be stated as the negative (shrinkage) or positive (expansion) difference in length after storage in relation to the reference length in per cent immediately after demoulding, using the equations for Δl_A and Δl_B :

$$\Delta l_A = \frac{l_t - l_1}{160} \times 100$$

$$\Delta l_B = \frac{l_t - l_{28}}{160} \times 100$$

where:

l_t is the length at storage time t in millimetres

EN 13872:2004 (E)

l_1 is the length at one day in millimetres

l_{28} is the length in millimetres at day twenty-eight

Δl_A and Δl_B are the dimensional changes of the test specimen in per cent for storage A and storage B respectively.

The test results are expressed as the arithmetic mean of the three individual values and given in per cent rounded to the nearest 0,01 %.

10 Test report

The test report shall include:

- a) reference to this European Standard;
- b) designation of the smoothing and/or levelling compound under test, the date of manufacture and/or batch number if known;
- c) method of mixing the smoothing and/or levelling compound and the total time in minutes in accordance with EN 1937;
- d) dimensional change values in accordance with clause 9;
- e) report of any indications of curl, twist or distortion;
- f) any factors that may have affected the test result;
- g) date of the test.

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover.
Tel: +44 (0)20 8996 9000. Fax: +44 (0)20 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: +44 (0)20 8996 9001.
Fax: +44 (0)20 8996 7001. Email: orders@bsi-global.com. Standards are also available from the BSI website at <http://www.bsi-global.com>.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre.
Tel: +44 (0)20 8996 7111. Fax: +44 (0)20 8996 7048. Email: info@bsi-global.com.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration.
Tel: +44 (0)20 8996 7002. Fax: +44 (0)20 8996 7001.
Email: membership@bsi-global.com.

Information regarding online access to British Standards via British Standards Online can be found at <http://www.bsi-global.com/bsonline>.

Further information about BSI is available on the BSI website at <http://www.bsi-global.com>.

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies.
