

BS EN 60127-2:2014

BSI Standards Publication

Miniature fuses

Part 2: Cartridge fuse-links

bsi.

...making excellence a habit.™

National foreword

This British Standard is the UK implementation of EN 60127-2:2014. It is identical to IEC 60127-2:2014. It supersedes BS EN 60127-2:2003+A2:2010, which will be withdrawn on 24 October 2017.

The UK participation in its preparation was entrusted to Technical Committee PEL/32, Fuses.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

This European Standard was approved by CENELEC on 2014-10-24. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Foreword

The text of document 32C/493/FDIS, future edition 3 of IEC 60127-2, prepared by SC 32C "Miniature fuses" of IEC/TC 32 "Fuses" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN 60127-2:2014.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2015-07-24
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2017-10-24

This document supersedes EN 60127-2:2003.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

Endorsement notice

The text of the International Standard IEC 60127-2:2014 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following note has to be added for the standard indicated:

IEC 61249-2-7:2002 NOTE Harmonized as EN 61249-2-7:2002 (not modified).

INTRODUCTION

According to the wish expressed by the users of miniature fuses, all standards, recommendations and other documents relating to miniature fuses should have the same publication number in order to facilitate reference to fuses in other specifications, for example, equipment specifications.

Furthermore, a single publication number and subdivision into parts would facilitate the establishment of new standards, because clauses and subclauses containing general requirements need not be repeated.

The new IEC 60127 series is thus subdivided as follows:

IEC 60127, *Miniature fuses* (general title).

IEC 60127-1, *Miniature fuses – Part 1: Definitions for miniature fuses and general requirements for miniature fuse-links*

IEC 60127-2, *Miniature fuses – Part 2: Cartridge fuse-links*

IEC 60127-3, *Miniature fuses – Part 3: Sub-miniature fuse-links*

IEC 60127-4, *Miniature fuses – Part 4: Universal modular fuse-links (UMF) – Through-hole and surface mount types*

IEC 60127-5, *Miniature fuses – Part 5: Guidelines for quality assessment of miniature fuse-links*

IEC 60127-6, *Miniature fuses – Part 6: Fuse-holders for miniature fuse-links*

IEC 60127-7, *Miniature fuses – Part 7: Miniature fuse-links for special applications*

IEC 60127-8, (Free for further documents)

IEC 60127-9, (Free for further documents)

IEC 60127-10, *Miniature fuses – Part 10: User guide for miniature fuses*

This Part of IEC 60127 covers additional requirements, test equipment and standard sheets.

The SI system of units is used throughout this standard.

MINIATURE FUSES –

Part 2: Cartridge fuse-links

1 Scope and object

This part of IEC 60127 relates to special requirements applicable to cartridge fuse-links for miniature fuses with dimensions measuring 5 mm × 20 mm and 6,3 mm × 32 mm for the protection of electric appliances, electronic equipment and component parts thereof, normally intended for use indoors.

It does not apply to cartridge fuse-links for appliances intended to be used under special conditions, such as in corrosive or explosive atmospheres.

This standard applies in addition to the requirements of IEC 60127-1.

The object of this standard is to define special and additional test methods for cartridge fuse-links applying in addition to the requirements of IEC 60127-1.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60068-2-20, *Environmental testing – Part 2-20: Tests – Test T: Test methods for solderability and resistance to soldering heat of devices with leads*

IEC 60068-2-21:2006, *Environmental testing – Part 2-21: Tests – Test U: Robustness of terminations and integral mounting devices*

IEC 60127-1:2006, *Miniature fuses – Part 1: Definitions for miniature fuses and general requirements for miniature fuse-links*
Amendment 1:2011

ISO 3, *Preferred numbers – Series of preferred numbers*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60127-1:2006, Clause 3, apply.

4 General requirements

Clause 4 of IEC 60127-1:2006 applies.

5 Standard ratings

Clause 5 of IEC 60127-1:2006 applies.

6 Marking

Clause 6 of IEC 60127-1:2006 applies except as follows:

6.1 Addition:

- e) A symbol denoting the rated breaking capacity. This symbol shall be placed between the marking for the rated current and the marking for the rated voltage.

These symbols are

H denoting high breaking capacity,

L denoting low breaking capacity,

E denoting enhanced breaking capacity.

EXAMPLES of marking:

T	3	1	5	L	2	5	0	V
---	---	---	---	---	---	---	---	---

		F	4	H	2	5	0	V
--	--	---	---	---	---	---	---	---

T	3	1	5	E	2	5	0	V
---	---	---	---	---	---	---	---	---

6.4 Add the following paragraph after the first paragraph:

The values for “d” and “s” shall be $0,8 \text{ mm} \pm 0,2 \text{ mm}$.

7 General notes on tests

Clause 7 of IEC 60127-1:2006 applies except as follows:

7.2.1 Addition:

For testing individual fuse ratings, the number of fuse-links required is 48, of which 12 are kept as spares. The testing schedule is shown in Table 1.

For the maximum ampere rating of a homogeneous series, the number of fuse-links required is 48, of which 22 are kept as spares. The testing schedule is shown in Table 2.

For the minimum ampere rating of a homogeneous series the number of fuse-links required is 33, of which 16 are kept as spares. The testing schedule is shown in Table 3.

Table 1 – Testing schedule for individual ampere ratings

Replacement:

7.3 Fuse-bases for tests

For tests that require a fuse-base for mounting the fuse-links, bases according to Figures 1, 2 or 3, shall be used as appropriate.

The contact resistance between each contact and a silvered brass piece having the same nominal dimensions and shape as the fuse-link to be tested shall not exceed 3 mΩ and is measured under the following conditions:

- in order to prevent the breakdown of thin insulating layers on the contacts, the e.m.f. of the circuit shall not exceed 20 mV (d.c. or a.c. peak);
- in order to prevent undue heating of the contacts, the current flowing shall not exceed 1 A.

Metal parts of the fuse-base, except the spring and connections, shall be made of brass. Brass parts of the fuse-base and of the gauge for measuring contact resistance shall have a copper content of between 58 % and 70 %. Contacts shall be silver-plated.

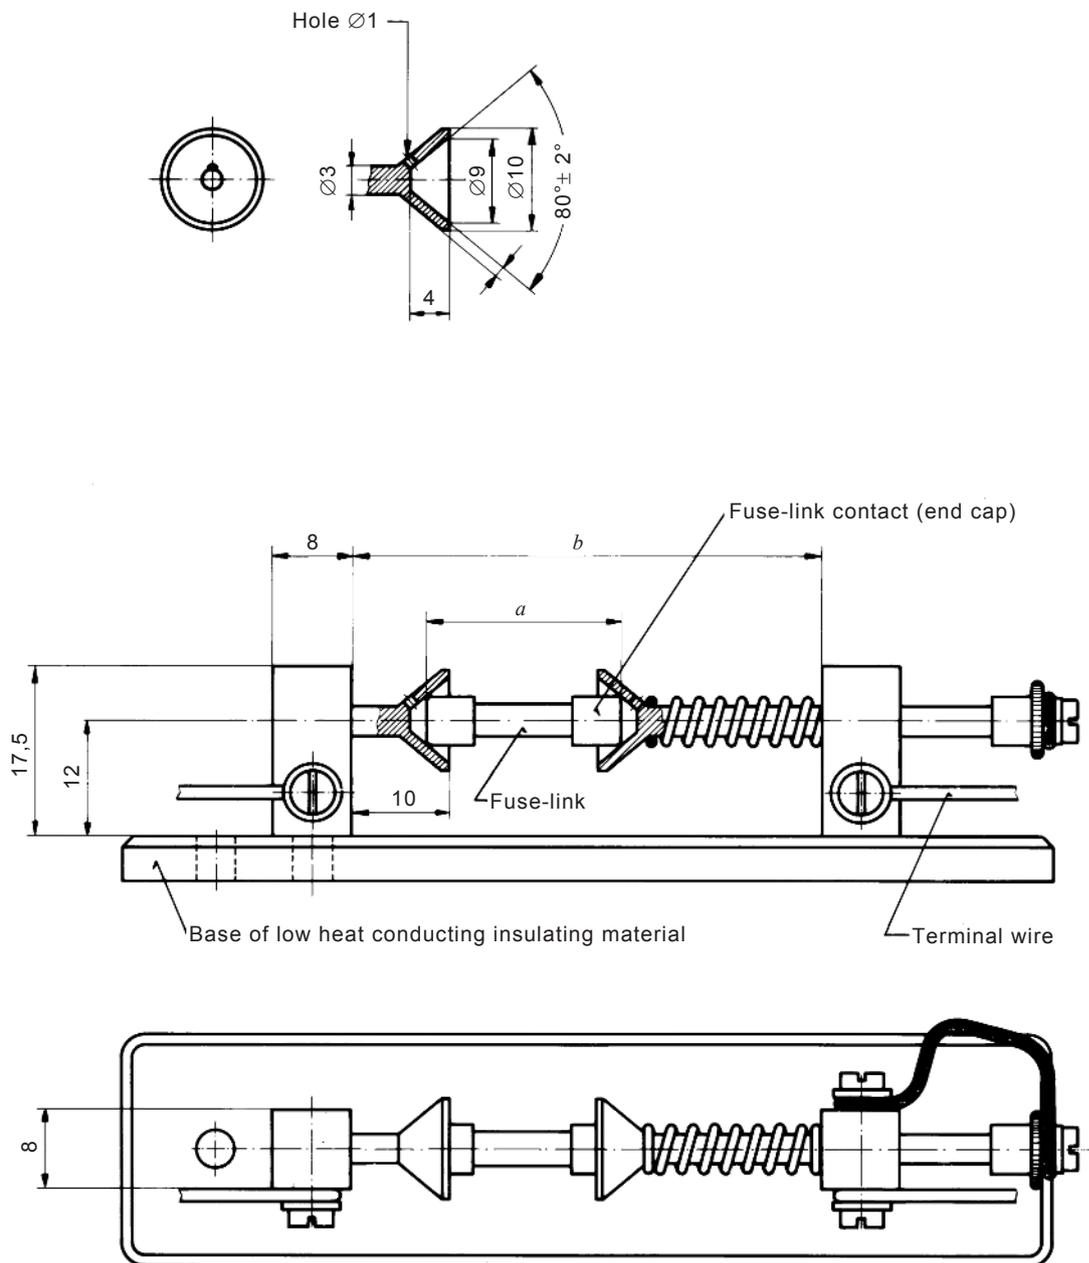

For fuse-links with rated currents up to and including 6,3 A, a fuse-base according to Figure 1 shall be used. The contact force shall be between 4 N and 6 N. The flexible lead and terminal wires shall be of copper and shall have a cross-sectional area of 1 mm²; the length of each of the terminal wires being approximately 500 mm.

For fuse-links with rated currents exceeding 6,3 A, a fuse-base according to Figure 2 shall be used. The contact force shall be between 8 N and 12 N. The flexible lead and terminal wires shall be of copper and shall have a cross-sectional area of 6 mm²; the length of each of the terminal wires being approximately 500 mm.

For breaking capacity tests, a fuse-base according to Figure 3, with the same contact force and conductor cross-sectional area as for the base in Figure 2, shall be used.

Dimensions in millimetres with tolerance of 0,1 mm

Fuse-links	<i>a</i> mm	<i>b</i> mm
5 mm × 20 mm	20	48
6,3 mm × 32 mm	32	60

Fuse-links	a mm	b mm
5 mm × 20 mm	20	67
6,3 mm × 32 mm	32	79

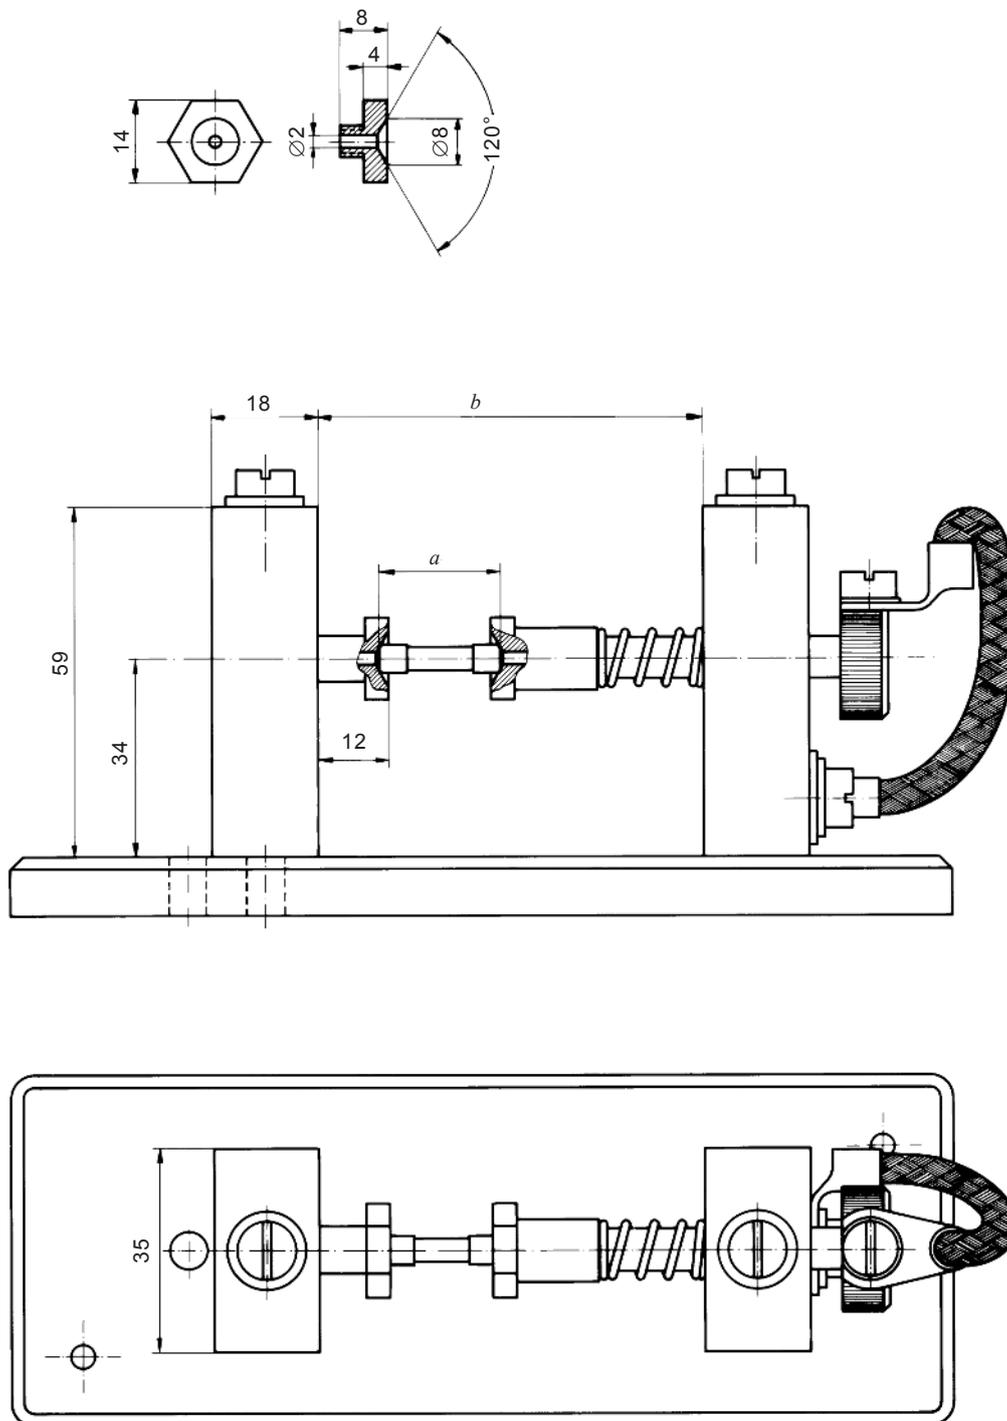

Figure 3 – Test fuse-base for breaking capacity tests (see 7.3)

8 Dimensions and construction

Clause 8 of IEC 60127-1:2006 applies except as follows:

8.2 Construction

Addition:

Where a “non-transparent” fuse-link is specified, a transparent case (body) may be used provided that there is an opaque filler.

This standard is based on the assumption that the case (body) is made of glass, ceramic or similar non-combustible material.

8.3 Terminations

Addition:

Fuse-links shall have at each end a metallic cap of cylindrical form.

The outer ends of the cylindrical caps shall be substantially flat and at right angles to the axis.

The end caps shall be firmly attached so that it is not possible to remove them without damaging the fuse-link.

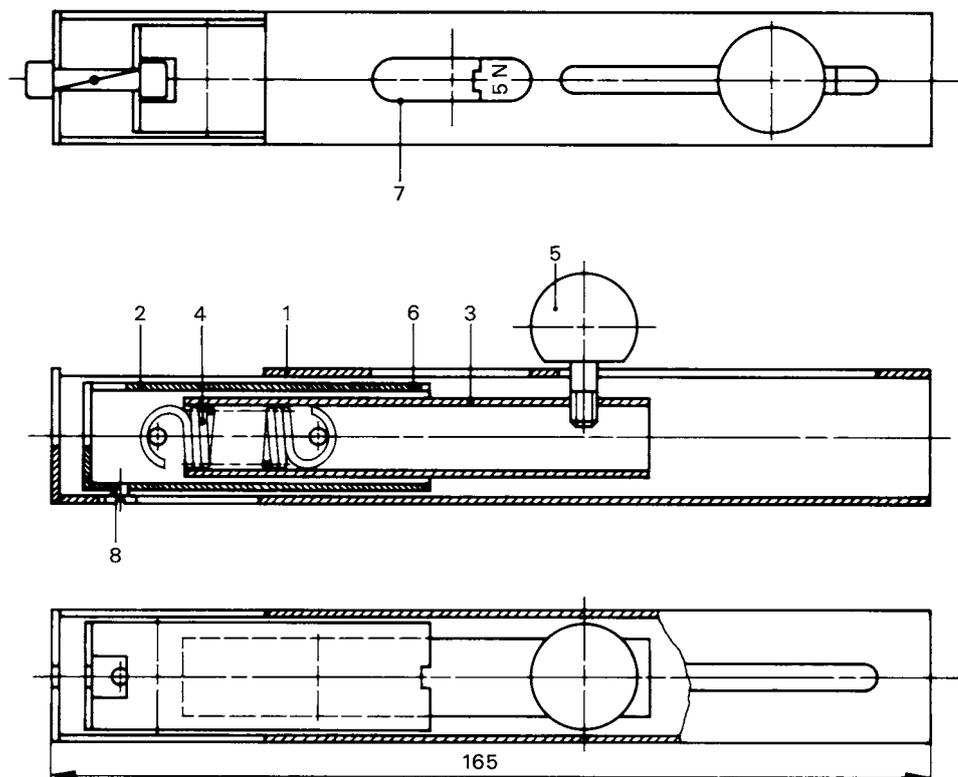

Compliance is checked by inspection and by the following test:

The samples are immersed in water for 24 h at a temperature of between 15 °C and 35 °C. After removal from the water, and axial pull steadily increasing to 5 N is applied to each cap for 1 min.

The caps shall remain firmly attached.

A suitable test apparatus for this purpose is given in Figure 4 and shall be used in cases of dispute. By using this apparatus, the test can be performed without distorting the end caps.

Dimensions in millimetres

IEC

The device has 3 tubes (1, 2, 3) sliding within each other.

The outer tube (1) has an opening at its upper end and a fixture receiving one end of the test sample.

The intermediate tube (2) similarly has a recess at its upper end and a fixture receiving the other end of the test sample.

The inner tube (3) is connected with tube (2) by means of a spring (4).

Moving downward tube (3) by pulling with knob (5) extends spring (4) and thus applies a steadily increasing axial force to tube (2) and to the test specimen.

The varying length of fuse cap and total link will be compensated by the sliding tube (2). Its lower end (6) appears within the observation window (7) and serves as a reference mark. The other mark (dashed line) together with the indication "5 N" is printed on tube (3). Coincidence of both marks is attained by adequately moving down knob (5), which can be screwed tight in this position.

Screw (8) ensures alignment of tubes (1) and (2).

The testing device is to be used and calibrated in the vertical position with the fuse under test at the top.

Figure 4 – Axial pull test apparatus

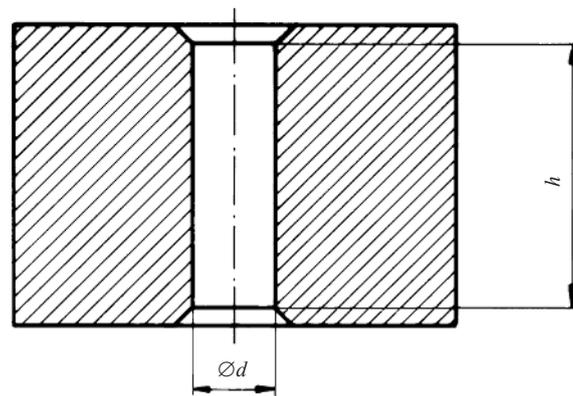

8.4 Alignment and configuration of terminations

Addition:

The end caps and the body of the fuse-link shall be in reasonable alignment.

Compliance is checked by means of the gauge shown in Figure 5.

The entire length of the fuse-link shall pass through the gauge by the fuse-link's own weight.

IEC

Tolerances of 0,01 mm.

Figure 5 – Alignment gauge (see 8.4)

9 Electrical requirements

Clause 9 of IEC 60127-1:2006 applies except as follows:

9.3 Breaking capacity

9.3.1 Operating conditions

Addition:

AC shall be used for this test.

A typical test circuit for the rated high-breaking capacity test is given in Figure 6, and for the rated low-breaking capacity test, a typical test circuit is given in Figure 7. A test base according to Figure 3 shall be used.

The power factor of the test circuit at rated high-breaking capacity shall be between 0,7 and 0,8. For tests at lower prospective currents, the inductance in the circuit shall remain constant and the current shall be adjusted by changing only the resistance.

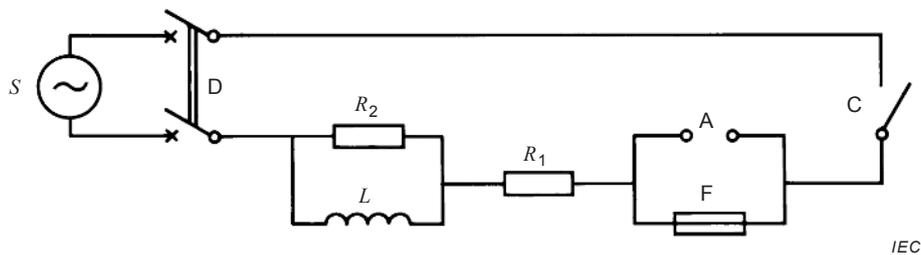

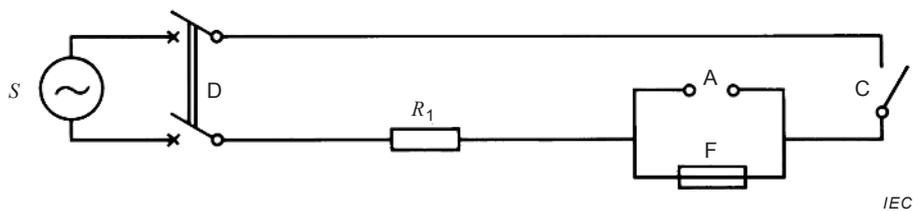

Figure 6 – Typical test circuit for breaking-capacity tests for high-breaking capacity fuse-links (see 9.3)

Key for Figures 6 and 7

- A Removable link used for calibration
- C Contactor that makes the circuit
- D Switch to disconnect the source of supply
- F Fuse-link under test
- S Source of supply, impedance less than 10 % of the total impedance of the circuit
- L Air-cored inductance of $0,30 \text{ mH} \pm 3 \%$
- R_1 Series resistor, adjusted to obtain correct prospective current
- R_2 Parallel resistor of $40 \Omega \pm 10 \%$ acting as a damping resistor

Figure 7 – Typical test circuit for breaking-capacity tests for low- and enhanced-breaking capacity fuse-links (see 9.3)

9.3.2 Criteria for satisfactory performance

Addition:

- fusing together of the contacts;
- illegibility of marking after test;
- piercing of the external surfaces of the end caps, visible to the naked eye.

The following phenomena are neglected:

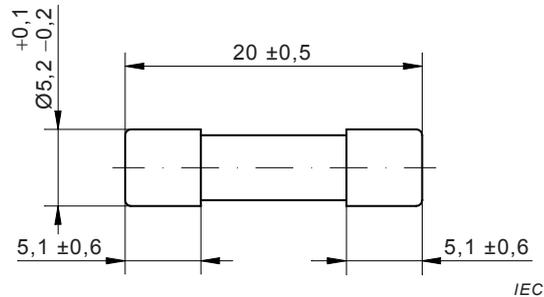

- black spots on the end caps;
- small deformation of the end caps;
- cracking of the fuse-link.

Addition:

10 Standard sheets

	Fuse-links 5 mm × 20 mm Quick-acting High-breaking capacity	Standard sheet 1 Page 1
--	--	-----------------------------------

Dimensions in millimetres

Alignment: The dimensions of the gauge are as follows: $h = 30$ mm; $d = 5,38$ mm $\pm 0,01$ mm (see 8.4).

Construction: The fuse-link shall be non-transparent.

Rated current ^a	Rated voltage V	Maximum voltage drop mV	Maximum sustained power dissipation W ^b			
50 mA 63 mA 80 mA 100 mA 125 mA 160 mA 200 mA	250	10 000 8 800 7 600 7 000 5 000 4 300 3 500	1,6

32 mA to 100 mA	30 min	10 ms	500 ms	3 ms	100 ms	20 ms
Above 100 mA to 6,3 A	30 min	50 ms	2 s	10 ms	300 ms	20 ms
Above 6,3 A to 10 A	30 min	50 ms	2 s	10 ms	400 ms	40 ms
Breaking capacity						
Rated breaking capacity: 35 A or 10 I_N whichever is greater, tested with a.c. and using the circuit given in Figure 7 for the low-breaking capacity test.						
For breaking capacity rated currents above 6,3 A shall be tested at 125 V.						
Care should be taken that the prospective fault currents of the circuit are within these limits.						
Endurance test						
100 cycles at 1,2 times the rated current according to 9.4 a) of IEC 60127-1, followed by 1 h (for ratings above 6,3 A 30 min) at 1,5 times the rated current according to 9.4 b) of IEC 60127-1.						

Fuse-links 5 mm × 20 mm Time-lag (surge proof) Low-breaking capacity	Standard sheet 3 Page 1
---	---------------------------------------

This type of fuse-link is recommended for the protection of circuits in telecommunication equipment or similar circuits with limited short-circuit current.

Dimensions in millimetres

Alignment: The dimensions of the gauge are as follows: $h = 30$ mm; $d = 5,38$ mm \pm 0,01 mm (see 8.4).

Construction: The fuse-link shall be transparent.

Rated current ^a	Rated voltage V	Maximum voltage drop mV	Maximum sustained power dissipation W ^b
32 mA	250	5000	1,6
40 mA		4000	
50 mA		3500	
63 mA		3000	
80 mA		3000	
100 mA		2500	
125 mA		2000	
160 mA		1900	
200 mA		1500	
250 mA		1300	
315 mA		1100	
400 mA		1000	
500 mA		900	
630 mA		300	
800 mA		250	
1 A		150	
1,25 A		150	
1,6 A		150	
2 A		120	
2,5 A		100	
3,15 A	100		
4 A	100		
5 A	100		
6,3 A	100		
8 A	125	100	4
10 A		100	

^a Intermediate values shall be chosen from the R 20 series according to ISO 3.

^b Measured after 1 h (for ratings above 6,3 A after 30 min) at $1,5 I_N$.

Marking

Fuse-links shall be marked with the following:

- rated current;
- rated voltage;
- manufacturer's name or trade mark;
- characteristic symbol T;
- breaking capacity symbol L.

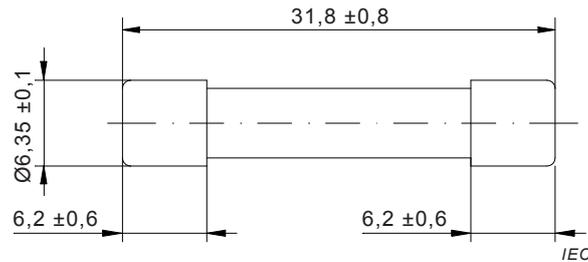

Fuse-links 5 mm × 20 mm Time-lag (surge-proof) Low-breaking capacity						Standard sheet 3 Page 2		
Pre-arcing time/current characteristic								
The pre-arcing time shall be within the following limits:								
Rated current	2,1 I_N		2,75 I_N		4 I_N		10 I_N	
	Maximum	Minimum	Maximum	Minimum	Maximum	Minimum	Maximum	
32 mA to 100 mA	2 min	200 ms	10 s	40 ms	3 s	10 ms	300 ms	
Above 100 mA to 10 A	2 min	600 ms	10 s	150 ms	3 s	20 ms	300 ms	
Test at a temperature of (70 ± 2) °C								
A current of 1,1 I_N shall be passed through the fuse-links for 1 h and they shall not operate.								
Breaking capacity								
Rated breaking capacity: 35 A or 10 I_N , whichever is greater, tested with a.c. and using the circuit given in Figure 7 for the low-breaking capacity test.								
For breaking capacity rated currents above 6,3 A shall be tested at 125 V.								
Care should be taken that the prospective fault currents of the circuit are within these limits.								
Endurance test								
100 cycles at 1,2 times the rated current according to 9.4 a) of IEC 60127-1, followed by 1 h (for ratings above 6,3 A 30 min) at 1,5 times the rated current according to 9.4 b) of IEC 60127-1.								

	Fuse-links 6,3 mm × 32 mm Quick-acting Low-breaking capacity	Standard Sheet 4 Page 1
--	---	---

This type of fuse-link is recommended for the protection of circuits in telecommunication equipment or similar circuits with limited short-circuit current.

NOTE This sheet is issued on the basis of actual needs in several countries. Modifications may be necessary for future use in more countries.

Dimensions in millimetres

Alignment: The dimensions of the gauge are: $h = 38$ mm; $d = 6,65$ mm \pm 0,01 mm (see 8.4).

Construction: The fuse-link shall be transparent.

Rated current	Rated voltage	Maximum voltage drop	Maximum sustained power dissipation
	V	mV	W*

10 A		100	
^a Intermediate values shall be chosen from the R 20 series according to ISO 3. ^b Measured after 1 h (for ratings above 6,3 A after 30 min) at $1,5 I_N$.			

Marking

Fuse-links shall be marked with the following:

- rated current;
- rated voltage;
- manufacturer's name or trade mark;
- characteristic symbol T;
- breaking capacity symbol H.

	Fuse-links 5 mm × 20 mm Time-lag (surge-proof) High-breaking capacity	Standard sheet 5 Page 2
--	--	---------------------------------------

Pre-arcing time/current characteristic

The pre-arcing time shall be within the following limits:

Rated current	2,1 I_N	2,75 I_N		4 I_N		10 I_N	
	Maximum	Minimum	Maximum	Minimum	Maximum	Minimum	Maximum
100 mA to 800 mA	30 min	250 ms	80 s	50 ms	5 s	5 ms	150 ms
Above 800 mA to 3,15 A	30 min	750 ms	80 s	95 ms	5 s	10 ms	150 ms
Above 3,15 A to 10 A	30 min	750 ms	80 s	150 ms	5 s	10 ms	150 ms

Test at a temperature of $(70 \pm 2) ^\circ\text{C}$

A current of $1,1 I_N$ shall be passed through the fuse-links for 1 h and they shall not operate.

Breaking capacity

Rated breaking capacity: 1 500 A, tested with a.c. and using the circuit given in Figure 6 for the high-breaking capacity test.

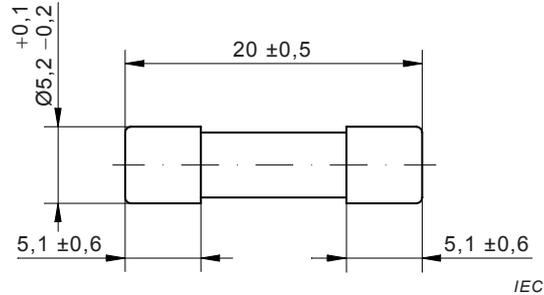

Endurance test

100 cycles at 1,2 times the rated current according to 9.4 a) of IEC 60127-1, followed by 1 h (for ratings above 6,3 A 30 min) at 1,5 times the rated current according to 9.4 b) of IEC 60127-1.

Fuse-links 5 mm × 20 mm Time-lag (surge proof) Enhanced breaking capacity	Standard sheet 6 Page 1
--	---

This type of fuse-link is recommended for the protection of circuits in equipment such as television sets having a prospective short-circuit current above 35 A, but not exceeding 150 A.

Dimensions in millimetres

Alignment: The dimensions of the gauge are as follows: $h = 30$ mm; $d = 5,38$ mm \pm 0,01 mm (see 8.4).

Construction: The fuse-link may be transparent or non-transparent.

Rated current ^a	Rated voltage V	Maximum voltage drop mV	Maximum sustained power dissipation W ^b
32 mA	250	5 000	1,6
40 mA		4 000	
50 mA		3 500	
63 mA		3 000	
80 mA		3 000	
100 mA		2 500	
125 mA		2 000	
160 mA		1 900	
200 mA		1 500	
250 mA		1 300	
315 mA		1 100	
400 mA		1 000	
500 mA		900	
630 mA		300	
800 mA		250	
1 A		150	
1,25 A		150	
1,6 A		150

Annex A (normative)

Miniature fuse-links with wire terminations

A.1 General

The automatic assembly of electrical and electronic circuits on printed boards has led to a requirement for miniature cartridge fuse-links which have the performance level of existing 5 mm × 20 mm types and are of a form suitable for automatic insertion into printed boards.

This annex supplements the requirements of this standard and is to be applied to already tested and approved 5 mm × 20 mm fuse-links which are available without wire terminations.

A.2 Scope

This annex relates to special requirements applicable to miniature fuse-links adapted to printed circuits and used for the protection of electric appliances, electronic equipment and component parts thereof, normally intended to be used indoors.

The following details of the terminations are not specified: the method of fixing, the orientation, the geometry of the cross section and the length.

The object of this annex is to define additional test methods for miniature fuse-links with wire terminations.

A.3 General notes on tests

In addition to the requirements of Clause 7 of IEC 60127-1:2006, the following criteria shall be observed.

A.3.1 Type tests

The number of miniature fuse-links required is 21.

The requirements of 7.2.2 of IEC 60127-1:2006 are not applicable.

No failure is allowed in any of the additional tests specified in this annex.

A.3.2 Testing schedule

The schedule for testing miniature fuse-links with wire terminations shall be according to Table A.1.

Table A.1 – Testing schedule

Subclause	Description	Fuse-link number						
		1 2 3	4 5 6	7 to 12	13 14 15	16 17 18	19 20 21	
A.4.1	Dimensions	X	X	X	X	X	X	
A.5.1	Voltage drop	X	X					
A.5.2	2,1 I_N	X						
A.5.3	Rated breaking capacity		X					
A.4.2	Mechanical tests on terminations			X				
A.4.3	Solderability				X			
A.4.4	Resistance to soldering heat					X		
A.5.4	Fuse-link temperature						X	
A.5.1	Voltage drop			X		X		

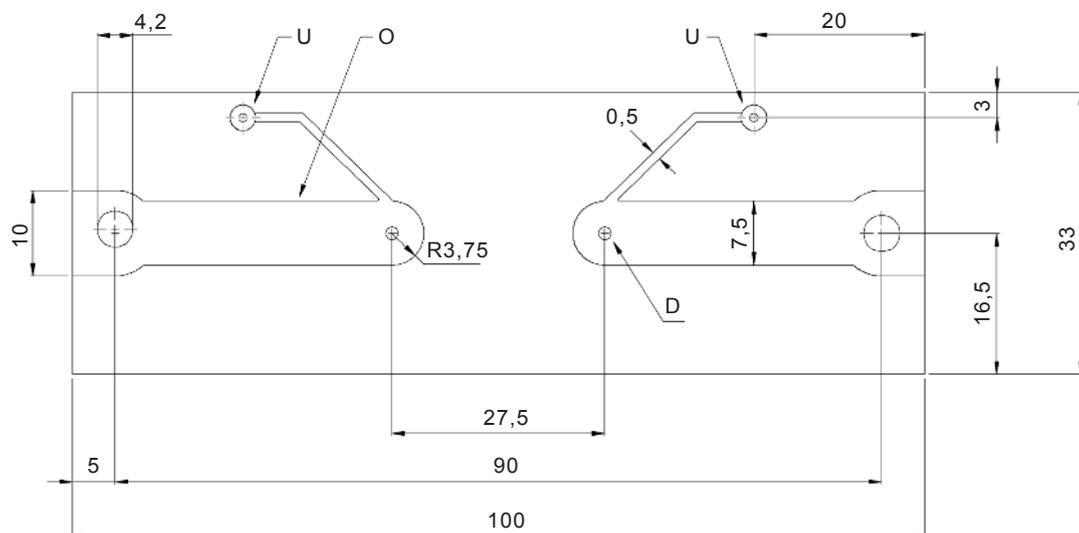

NOTE Fuse-links numbered 7 to 12 and 16 to 18 are tested before soldering to the test board for the measurement of voltage drop. Fuse-links 13 to 15 are not soldered to the test board.

A.3.3 Test bases for tests

Miniature fuse-links with wire terminations shall be tested in a test board as shown in Figure A.1. The fuse-link under test shall be soldered to the test board, using the minimum amount of heat to produce a satisfactory soldered joint, and excess wire shall be removed. The test board shall then be mounted on the test base of Figure A.2.

Not to scale

Dimensions in millimetres

IEC

Key

O copper layer: 0,035 mm for rated current up to and including 6,3 A;
0,070 mm for rated current above 6,3 A.

Hot tin dipping is optional.

U connection for voltage drop measurement

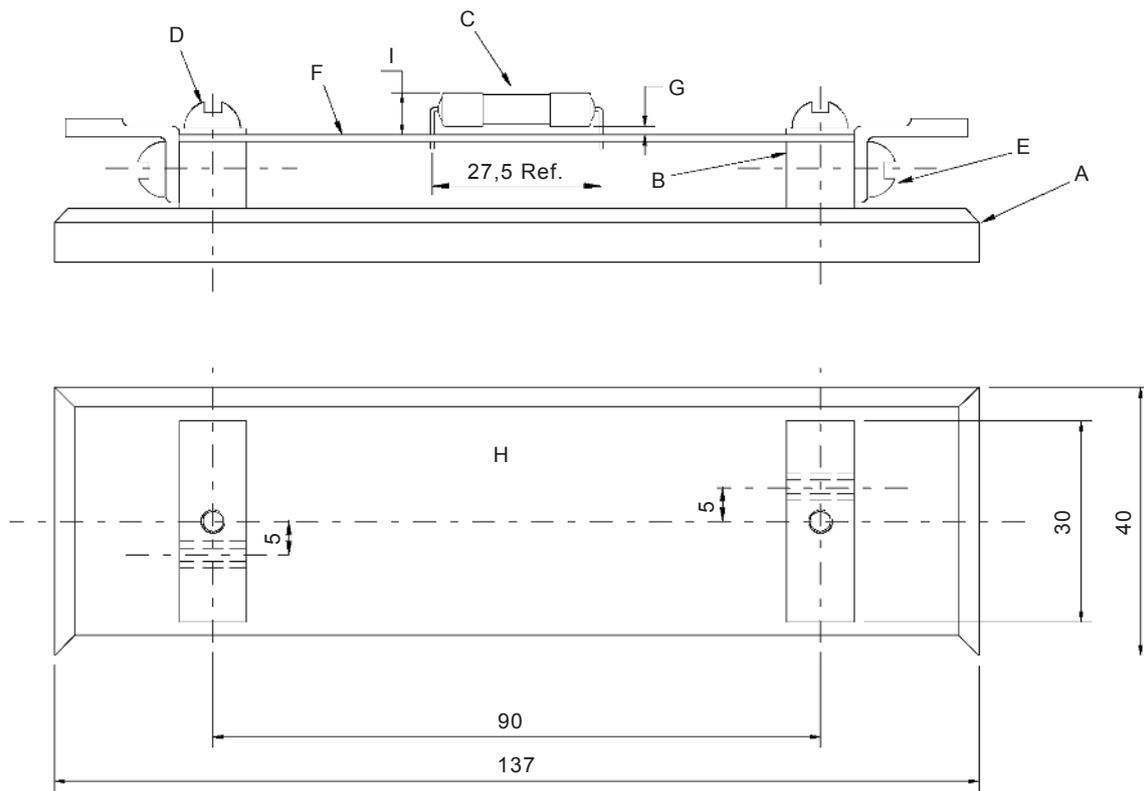

D diameter of 1 mm for rated current up to and including 6,3 A;
diameter of 1,5 mm for rated current above 6,3 A.

A mechanical device may be used as long as it is demonstrated that the results are the same.

Figure A.1 – Test board

Dimensions in millimetres

IEC

Key

- A base of low heat conducting material, thickness 10 mm
- B brass electrodes 10 mm × 10 mm
- C fuse-link soldered in place
- D fixing screws
- E contact screws holding solder terminal
- F test board (see Figure A.1)
- G space between end-caps of fuse-link and test board: 0,25 mm minimum
- H top view of test base with 10 mm × 10 mm brass electrodes
- I 10 mm maximum above test board

The terminations of the fuse-link may be bent as required to fit the test board.

Figure A.2 – Test base

The test board shall be made of epoxide woven glass fabric copper-clad laminated sheet as defined in IEC 60249-2-5.

The nominal sheet thickness including the metal foil shall be 1,6 mm.

The nominal thickness of the copper layer shall be 0,035 mm for fuse-links rated up to and including 6,3 A and 0,070 mm for fuse-links above 6,3 A.

Metal parts of the test base shall be made of brass with copper content between 58 % and 70 %. Contact parts shall be silver-plated.

A.4 Dimensions and construction

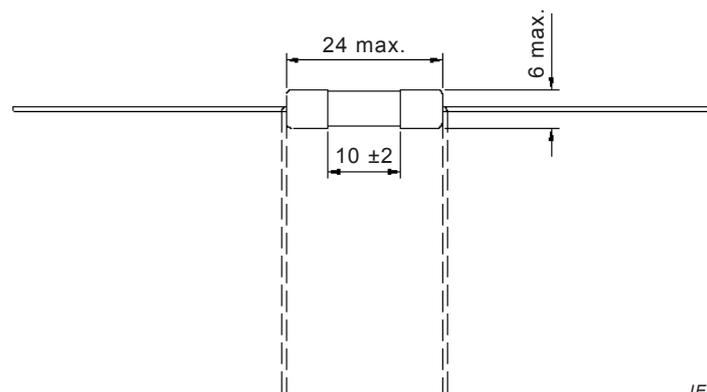

In addition to the requirements of Clause 8 of IEC 60127-1:2006, the following criteria are to be observed.

A.4.1 Dimensions

The dimensions of the miniature fuse-link shall comply with Figure A.3. Compliance is checked by measurement.

Not to scale

Dimensions in millimetres

IEC

Terminations

- The length of the terminations is not specified.
- The cross-sectional shape of the wire termination is optional.
- The termination shall go through a hole of:
 - 1 mm diameter for rated currents up to and including 6,3 A;
 - 1,5 mm diameter for rated currents above 6,3 A.
- The orientation of the terminations is not specified (alternative shown above).
- The method of fixing the terminations is not specified.

Figure A.3 – Dimensions of fuse-link with wire terminations

A.4.2 Mechanical tests on terminations

Terminations shall withstand the mechanical forces likely to be encountered during normal use. Compliance is checked by the following tests which are to be performed in accordance with IEC 60068-2-21.

The samples are preconditioned by immersion in water for 24 h at a temperature between 15 °C and 35 °C.

With the miniature fuse-link held in a fixed position, each terminal in turn is subjected to the forces laid down in items a) and b). Test sample groups shall be equally divided between the following termination tests.

a) Test Ua₁: tensile

With the termination in its normal position and the fuse-link held by its body, a force of (10 ± 1) N is applied in the direction of axis and acting in a direction away from the body of the component. The force shall be applied progressively (without any shock) and then maintained for a period of (10 ± 1) s.

b) Test Ub: bending (applicable to pliable terminations only)

For the bending test according to IEC 60068-2-21, the force applied shall be:

- $(5 \pm 0,5)$ N for wire diameters of 0,5 mm to 0,8 mm;
- $(10 \pm 0,5)$ N for wire diameters of above 0,8 mm to 1,25 mm;

and the number of bends shall be two. The bending can be done according to Method 1 (two bends in opposite directions) or Method 2 (two bends in the same direction).

NOTE The value of the force to be applied for wire diameters above 1,25 mm and for strip terminations can be found in Table 4 of IEC 60068-2-21:2006.

At the conclusion of testing, the miniature fuse-link terminations shall remain firmly attached and the voltage drop shall not exceed the maximum permissible values in the relevant standard sheet.

A.4.3 Solderability of terminations

The fuse-links shall be subjected to Test Ta of IEC 60068-2-20, using Method 1 (solder bath at 235 °C), with the following conditions:

Ageing:	None (as received)
Immersion conditions:	(235 ± 5) °C, $(2 \pm 0,5)$ s
Depth of immersion:	2,0 mm \pm 0,5 mm (from seating plane)
Flux type:	Non-activated
Screen:	A screen should be used.

Inspection shall be carried out under adequate light with the naked eye or with the assistance of a magnifier capable of giving a magnification of 4 to 10.

The dipped surface shall be covered with a smooth and bright solder coating, with no more than small amounts (less than 10 % of the tested area) of scattered imperfections such as pin-holes or un-wetted or de-wetted areas. These imperfections shall not be concentrated in one area.

A.4.4 Resistance to soldering heat

The fuse-links shall be subjected to Test Tb of IEC 60068-2-20, using Method 1A (solder bath at 260 °C), with the following conditions:

Ageing:	None (as received)
Immersion conditions:	(260 ± 5) °C, (10 ± 1) s
Depth of immersion:	2,0 mm \pm 0,5 mm (from seating plane)
Flux type:	Activated
Screen:	A screen should be used.

After the test the fuse-link shall not have cracked, marking shall be readable and colour coding, if used, shall not have changed colour.

The voltage drop is measured as specified in A.4.1 and shall not exceed the maximum values specified in the relevant standard sheet.

A.5 Electrical requirements

In addition to the requirements of Clause 9 of IEC 60127-1:2006, the following criteria shall be observed.

A.5.1 Voltage drop

The use of a high impedance voltmeter is recommended for measuring the voltage drop. Voltage drop shall be measured at the points marked with U in Figure A.1.

A.5.2 Time/current characteristic at normal ambient temperature

Time/current characteristic at $2,1 I_N$ shall be checked in accordance with the relevant standard sheet.

A.5.3 Breaking capacity

Rated breaking capacity shall be checked as specified in the relevant standard sheet.

A.5.4 Fuse-link temperature

Fuse-links shall be tested according to 9.7 of IEC 60127-1:2006 with the following modifications:

Replace the second paragraph of 9.7 by the following:

The temperature rise, as measured on the terminations where they enter the test board, shall not exceed 150 K when the fuse-link is tested as follows. The fuse-link shall be spaced 1 mm from the printed wiring board.

Replace the text of the first dash by:

- the initial current shall be $1,5 I_N$;

Replace the text of the last dash by:

- the temperature during the last 30 seconds prior to opening shall be ignored.

Add an additional dash and text as follows:

- the thermocouple size shall be no larger than $0,05 \text{ mm}^2$ (30 AWG).

Delete NOTE 1 and change NOTE 2 to NOTE.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright
