

**BSI Standards Publication**

# **Industrial-process control systems — Instruments with analogue inputs and two- or multi-position outputs**

Part 2: Guidance for inspection and  
routine testing

**National foreword**

This British Standard is the UK implementation of EN 61003-2:2016. It is identical to IEC 61003-2:2016. It supersedes BS EN 61003-2:2009, which will be withdrawn on 4 November 2019.

The UK participation in its preparation was entrusted by Technical Committee GEL/65, Measurement and control, to Subcommittee GEL/65/2, Elements of systems.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

 (IEC 61003-2:2016)

This European Standard was approved by CENELEC on 2016-07-19. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## **European foreword**

The text of document 65B/1039/FDIS, future edition 2 of IEC 61003-2, prepared by SC 65B "Measurement and control devices", of IEC/TC 65 "Industrial-process measurement, control and automation" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN 61003-2:2016.

The following dates are fixed:

- latest date by which the document has to be implemented at (dop) 2017-05-04 national level by publication of an identical national standard or by endorsement
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2019-11-04

This document supersedes EN 61003-2:2009.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

## **Endorsement notice**

The text of the International Standard IEC 61003-2:2016 was approved by CENELEC as a European Standard without any modification.

**Annex ZA**  
(normative)

**Normative references to international publications  
with their corresponding European publications**

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 When an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: [www.cenelec.eu](http://www.cenelec.eu).

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**INDUSTRIAL-PROCESS CONTROL SYSTEMS –  
INSTRUMENTS WITH ANALOGUE INPUTS AND  
TWO OR MULTI-POSITION OUTPUTS –****Part 2: Guidance for inspection and routine testing****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61003-2 has been prepared by subcommittee 65B: Measurement and control devices, of IEC technical committee TC 65: Industrial-process measurement, control and automation.

This second edition cancels and replaces the first edition published in 2009. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) use of the term "two- or multi-position output" instead of "two- or multi-state instrument" (see Scope);
- b) use of the term "differential gap" instead of "switching differential" (see Table 1 No 2);
- c) use of the term "dielectric strength" instead of "isolation test" (see Table 1 No 5).

The text of this standard is based on the following documents:

FDIS	Report on voting
65B/1039/FDIS	65B/1049/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

This International Standard is to be used in conjunction with IEC 61003-1:2016. IEC 61298-2:2008 and IEC 61298-3:2008.

A list of all parts of the IEC 61003 series, published under the general title *Industrial-process control systems – Instruments with analogue inputs and two or multi-position outputs*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

## INDUSTRIAL-PROCESS CONTROL SYSTEMS – INSTRUMENTS WITH ANALOGUE INPUTS AND TWO OR MULTI-POSITION OUTPUTS –

### **Part 2: Guidance for inspection and routine testing**

#### **1 Scope**

This part of IEC 61003 gives guidelines for inspection and routine testing of electrical and pneumatic instruments with two- or multi-position output, for instance, for acceptance tests or after repair, and it is to be used in conjunction with IEC 61003-1:2016 IEC 61298-2:2008 and IEC 61298-3:2008.

This part of IEC 61003 is applicable to electrical and pneumatic industrial-process instruments, using measured values that are continuous signals. The set point value may be either a mechanical (position, force, etc.) or a standard signal. These instruments may be used as controllers or as switches for alarms and other similar purposes.

Quantitative criteria for acceptable performance should be established by agreement between manufacturer and user, and the report on the tests clarifies which tests were carried out. The requirements of this standard are effective when agreed by the manufacturer and the user.

#### **2 Normative references**

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61003-1:2016 *Industrial-process control systems – Instruments with analogue inputs and two- or multi-position outputs – Part 1: Methods for evaluating performance*

IEC 61298 (all parts), *Process measurement and control devices – General methods and procedures for evaluating performance*

IEC 61298-2:2008, *Process measurement and control devices – General methods and procedures for evaluating performance – Part 2: Tests under reference conditions*

IEC 61298-3:2008, *Process measurement and control devices – General methods and procedures for evaluating performance – Part 3: Tests for the effects of influence quantities*

IEC 61298-4, *Process measurement and control devices – General methods and procedures for evaluating performance – Part 4: Evaluation report content*

#### **3 Terms and definitions**

For the purposes of this document, the terms and definitions given in IEC 61003-1, IEC 61298-2 and the following apply.

**3.1****acceptance test**

contractual test to prove to the customer that the item meets certain conditions of its specification

## **4 Sampling for test**

Usually a routine test is applied to each instrument. If, agreed upon by the user and manufacturer, the tests can be performed on a sample lot.

When sampling is used, instruments to be tested may be chosen by the user's inspector.

## **5 Performance tests**

### **5.1 General**

Test items for routine test and acceptance test are specified in Table 1. The sequence of the tests shall be such that the results of a test are not affected by a previous test.

The following test conditions, test methods and test procedures are compatible with IEC 61003-1 and IEC 61298.

**Table 1 – Test items**

No.	Designation	Subclause of this standard	Subclause of IEC 61003-1:2016
1.	Inaccuracy of switching points	5.3	6.1.1.2
2.	Inaccuracy of differential gap		6.1.1.4
3.	Set point adjustable and measurable or indicated		6.1.3.1
	Set point adjustable but not indicated		6.1.3.2
	Set point not adjustable		6.1.3.3
4.	Indication of the measured value		6.3.2
5.	Dielectric strength <sup>a</sup>		6.3.4
6.	Characteristics of the multi-position output		7.2.1
7.	Determination of switching range		7.2.3
8.	Supply voltage variations	5.4	6.2.8
	Supply pressure variations		6.2.11

<sup>a</sup> For safety use only.

b Routine tests do not test frequency variations.

### **5.2 Test conditions**

#### **5.2.1 Ambient conditions**

- Temperature from 15 °C to 25 °C;
- Relative humidity from 45 % to 75 %;
- Atmospheric pressure from 86 kPa to 106 kPa;
- Electromagnetic field value to be stated if relevant.

The maximum rate of change of ambient temperature permissible during any test shall be 1 °C in 10 min and less than 3 °C/h.

## 5.2.2 Supply conditions

Electrical supply:

- Rated voltage                           ±1 %;
- Rated frequency                        ±1 %;
- Harmonic distortion (a.c. supply)   less than 5 %;
- Ripple (d.c. supply)                   less than 0,1 %.

Pneumatic supply:

- Rated pressure                        ±3 %;
- Supply air temperature              ambient temperature ±2 °C;
- Supply air humidity                 dew point at least 10 °C below device's body temperature;
- Oil and dust content                 oil: less than  $1 \times 10^{-6}$  by weight;  
  dust: absence of particles greater than 3 µm.

## 5.3 Tests under reference conditions

### 5.3.1 General

All tests given in 6.1 and 6.3 of IEC 61003-1:2016 should be carried out. Multi-position output should supplement the tests given in Clause 7 of IEC 61003-1:2016. The detailed test procedures are given in IEC 61298-2.

### 5.3.2 Set point

#### 5.3.2.1 Set point adjustable and measurable or indicated

The set point shall be tested at value of 10 %, 50 % and 90 % at least, the 50 % value being taken last. The measurement or indication accuracy shall be determined at five points approximately evenly spaced over the range.

#### 5.3.2.2 Set point adjustable but not indicated

The set point shall be tested for at least three values, approximately evenly spaced over the effective range of adjustment.

#### 5.3.2.3 Set point not adjustable

The set point shall be tested directly.

#### 5.3.2.4 Multi-position output set point

Each position should be tested in accordance with 5.3.2.1, 5.3.2.2 and 5.3.2.3. IEC 61003-1:2016, 7.2.2 gives the test method of mutual influence of pairs of switching points.

## 5.4 Tests for the effects of influence quantities

### 5.4.1 General

When testing the effects of influence quantities, the set point shall be not less than one. For measurable or indicated instruments, indication of the measured value should be tested also. For set point adjustable instruments, the value of 50 % should be included.

The effects on switching points of influence quantities should be tested in accordance with 6.2 of IEC 61003-1:2016 and with IEC 61298-3.

### **5.4.2 Supply voltage variations**

This test shall be performed on instruments with electrical power supply for internal operations.

For two-wire instruments, fix the load resistance at nominal value or a convenient value, and record this value.

Test the instruments with the power voltage set at the nominal value, maximum value and minimum value successively.

### **5.4.3 Supply pressure variations**

This test shall be performed on instruments with pressure supply.

The testing supply pressure should be nominal value, +10 % of the nominal value or the manufacturer's limit, –15 % of the nominal value or the manufacturer's limit.

## **6 Test report and documentation**

### **6.1 General**

A test report of the evaluation shall be prepared in accordance with IEC 61298-4 after completing all tests.

All the original documentation, related to the tests, shall be stored by the test laboratory for at least two years, after the report is issued.

### **6.2 Test report and general observations**

Table 2 gives an example of a summary of the test results information to be reported.

**Table 2 – Test report and general observations**

No.	Designation	Reference	Unit	Information to be reported
1.	Inaccuracy of switching points	IEC 61298-2:2008, 4.1.7	%	Values of points $x_1$ and $x_2$ and their average shall be reported. The differential gap ( $x_1 - x_2$ ) shall be noted for each cycle. The greatest positive and negative deviations of any measured value of $x_1$ and $x_2$ , of any cycle, from the set point $w$ for increasing and decreasing inputs shall be reported as switching point inaccuracy.
2.	Inaccuracy of differential gap	IEC 61298-2:2008, 4.1.7.1	%	The difference between the average value of $x_1$ and the average value of $x_2$ , shall be reported as $X_{sd}$ . The greatest positive and negative deviations of any measured value of the differential gaps – calculated in each of the five cycles – from the $X_{sd}$ value, shall be reported as differential gap inaccuracy.
3.	Set point adjustable and measurable or indicated	IEC 61298-2:2008, 4.1.7.1 and 4.1.7.6	%	The greatest positive and negative deviations of any measured value of $x_m$ from the ideal set-point value for each cycle and for each set point shall be reported as inaccuracy of set point setting.
4.	Set point adjustable but not indicated	IEC 61298-2:2008, 4.1.7.1 and 4.1.7.6	%	Values of $x_1$ , $x_2$ and $X_{sd}$ , and their accuracy-related factors and values of $x_m$ , shall be reported.
5.	Set point not adjustable	IEC 61298-2:2008, 4.1.7.1 and 4.1.7.6	%	Values of $x_1$ , $x_2$ and $X_{sd}$ , and their accuracy-related factors and values of $x_m$ , shall be reported.
6.	Indication of the measured value		%	The changes in measured value indicated shall be recorded.
7.	Dielectric strength	IEC 61298-2:2008 6.3.3		Report any appreciable transient overvoltage that occurs during tests.
8.	Characteristics of the multi-position output		%	Each position shall report $x_{i1}$ , $x_{i2}$ , $x_{mi}$ , $x_{sdi}$ , $x_{i1} - x_{i2}$ , $x_{sri}$ and an appropriate, $x_{mi} - w$ , (see IEC 61003-1:2016, Figure 2)
9.	Supply voltage variations	IEC 61298-3:2008, 12.1	%	The effect on switching points, measured during test, (and measured value) shall be reported.
10.	Supply pressure variations <sup>a</sup>	IEC 61298-3:2008, 12.8	%	The effect on switching points shall be reported <sup>a</sup> .

<sup>a</sup> If the manufacturer's specified limits are less than the preferred test values, this fact shall be reported with the test result.

# British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

## About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

## Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at [bsigroup.com/standards](http://bsigroup.com/standards) or contacting our Customer Services team or Knowledge Centre.

## Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at [bsigroup.com/shop](http://bsigroup.com/shop), where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

## Copyright in BSI publications

All the content in BSI publications, including British Standards, is the property of and copyrighted by BSI or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Save for the provisions below, you may not transfer, share or disseminate any portion of the standard to any other person. You may not adapt, distribute, commercially exploit, or publicly display the standard or any portion thereof in any manner whatsoever without BSI's prior written consent.

## Storing and using standards

Standards purchased in soft copy format:

- A British Standard purchased in soft copy format is licensed to a sole named user for personal or internal company use only.
- The standard may be stored on more than 1 device provided that it is accessible by the sole named user only and that only 1 copy is accessed at any one time.
- A single paper copy may be printed for personal or internal company use only.

Standards purchased in hard copy format:

- A British Standard purchased in hard copy format is for personal or internal company use only.
- It may not be further reproduced – in any format – to create an additional copy. This includes scanning of the document.

If you need more than 1 copy of the document, or if you wish to share the document on an internal network, you can save money by choosing a subscription product (see 'Subscriptions').

## Reproducing extracts

For permission to reproduce content from BSI publications contact the BSI Copyright & Licensing team.

## Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to [bsigroup.com/subscriptions](http://bsigroup.com/subscriptions).

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

**PLUS** is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit [bsigroup.com/shop](http://bsigroup.com/shop).

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email [subscriptions@bsigroup.com](mailto:subscriptions@bsigroup.com).

## Rewrites

Our British Standards and other publications are updated by amendment or revision. We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
