Industrial-process measurement and control — Data structures and elements in process equipment catalogues

Part 12: Lists of properties (LOPs) for flow measuring equipment for electronic data exchange

bsi.

National foreword

This British Standard is the UK implementation of EN 61987-12:2016. It is identical to IEC 61987-12:2016.

The UK participation in its preparation was entrusted to Technical Committee AMT/7, Industrial communications: process measurement and control, including fieldbus.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

INDUSTRIAL-PROCESS MEASUREMENT AND CONTROL – DATA STRUCTURES AND ELEMENTS IN PROCESS EQUIPMENT CATALOGUES –

Part 12: Lists of properties (LOPs) for flow measuring equipment for electronic data exchange

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61987-12 has been prepared by subcommittee 65E: Devices and integration in enterprise systems, of IEC technical committee 65: Industrial-process measurement, control and automation.

The text of this standard is based on the following documents:

FDIS	Report on voting
65E/490/FDIS	65E/494/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61987 series, published under the general title *Industrial-process measurement and control – Data structures and elements in process equipment catalogues*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

The exchange of product data between companies, business systems, engineering tools, data systems within companies and, in the future, control systems (electrical, measuring and control technology) can run smoothly only when both the information to be exchanged and the use of this information has been clearly defined.

Prior to this standard, requirements on process control devices and systems were specified by customers in various ways when suppliers or manufacturers were asked to quote for suitable equipment. The suppliers in their turn described the devices according to their own documentation schemes, often using different terms, structures and media (paper, databases, CDs, e-catalogues, etc.). The situation was similar in the planning and development process, with device information frequently being duplicated in a number of different information technology (IT) systems.

Any method that is capable of recording all existing information only once during the planning and ordering process and making it available for further processing, gives all parties involved an opportunity to concentrate on the essentials. A precondition for this is the standardization of both the descriptions of the objects and the exchange of information.

This standard series proposes a method for standardization which will help both suppliers and users of measuring equipment to optimize workflows both within their own companies and in their exchanges with other companies. Depending on their role in the process, engineering firms may be considered here to be either users or suppliers.

The method specifies measuring equipment by means of blocks of properties. These blocks are compiled into lists of properties (LOPs), each of which describes a specific equipment (device) type. This standard series covers both properties that may be used in an inquiry or a proposal and detailed properties required for integration of the equipment in computer systems for other tasks.

IEC 61987-10 defines structure elements for constructing lists of properties for electrical and process control equipment in order to facilitate automatic data exchange between any two computer systems in any possible workflow, for example engineering, maintenance or purchasing workflow and to allow both the customers and the suppliers of the equipment to optimize their processes and workflows. IEC 61987-10 also provides the data model for assembling the LOPs.

IEC 61987-11 specifies the generic structure for operating and device lists of properties (OLOPs and DLOPs). It lays down the framework for further parts of IEC 61987 in which complete LOPs for device types measuring a given physical quantity and using a particular measuring principle will be specified. The generic structure may also serve as a basis for the specification of LOPs for other industrial-process control instrument types such as control valves and signal processing equipment.

IEC 61987-12 concerns flow measuring equipment. It provides one operating LOP for all types of flow transmitter which can be used, for example, as a request for various sorts of quotation. The DLOPs provided in this standard for a range of flow transmitter types can be used in very different ways: in the computer systems of equipment manufacturers and suppliers; in CAE and similar systems of EPC contractors and other engineering companies; and especially in the various plant maintenance systems used by plant owners. The OLOP and the DLOPs provided correspond to the guidelines specified in IEC 61987-10 and IEC 61987-11.

INDUSTRIAL-PROCESS MEASUREMENT AND CONTROL – DATA STRUCTURES AND ELEMENTS IN PROCESS EQUIPMENT CATALOGUES –

Part 12: Lists of properties (LOPs) for flow measuring equipment for electronic data exchange

1 Scope

This part of IEC 61987 provides an

- operating list of properties (OLOP) for the description of the operating parameters and the collection of requirements for a flow measuring equipment and
- device lists of properties (DLOP) for the description of a number of flow measuring equipment types.

The structures of the OLOP and the DLOP correspond to the general structures defined in IEC 61987-11 and agree with the fundamentals for the construction of LOPs defined in IEC 61987-10.

Aspects other than the OLOP, needed in different electronic data exchange processes described in IEC 61987-10, will be published in IEC 61987-92[1].

Libraries of properties and of blocks used in the LOPs in this standard are listed in Annex C and Annex D.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purpose of this document, the terms and definitions given in IEC 61987-10 and IEC 61987-11 apply.

---

1 Under consideration

4 General

4.1 Overview

The LOPs provided by this document are intended for use in electronic data exchange processes performed between any two computer systems. The computer systems can both belong to the same company or they can belong to different companies as described in Annex C of IEC 61987-10:2009.

The OLOP for the family of flow measuring equipment is to be found in Annex A while the DLOPs of the individual flow device types are to be found in Annex B.

Structural elements such as LOP type, block and property defined in this standard are available in electronic form in the “Automation equipment” domain of the IEC Common Data Dictionary (CDD).

4.2 Depiction of OLOPs and DLOPs

4.2.1 General

The properties of the OLOPs and DLOPs used in this part of IEC 61987 have been created in conformance to the requirements of the IEC 61360 series. As such, the structural elements, properties and attributes to be found in the IEC Common Data Dictionary are normative.

4.2.2 Structural roles

The entities within a list of properties can have one of a number of structural roles.

a) **Property**
A property exists as a property only.

b) **Ref. property + Block**
A reference property connects a block to the superordinate block or LOP in which it is embedded.

Properties and sub-blocks listed below a block name and placed one position to the right are elements of the block. A block ends when another block name appears in the same column as the block name or in any other column to its left.

The reference property has the same preferred name as the block to which it refers. All attributes of these properties are available in the IEC Common Data Dictionary (CDD).

c) **Cardinality property**
A cardinality property is connected to the block which immediately follows it. The value of the property (0 … n) in a transaction file determines the number of times the associated block shall be repeated. It is identified by the identifier in the column “Property identifier”.

The preferred name of a cardinality property is “Number of <xxxx>“, where <xxxx> is derived from name of the block with which it is associated.

In the transaction file (see examples in 4.3), it can be seen that a block has been repeated twice:

– the cardinality property directly before the block has a value greater than 1,

– the name of the repeated block is extended by “_” followed by the repetition number.

Example:

If the block “Signal function” is repeated 3 times, the following construction occurs in the transaction file:

“number of signal function” has the value “3”	- cardinality property
“Signal function_1”	- first repeated block
…	
“Signal function_2”	- second repeated block
…	

"Signal function_3" - third repeated block

…

d) **Ref. property + Block**
This role is similar to b) but the block concerned can be repeated according to value of the cardinality property which precedes it.

e) **Polymorphic control property**
A polymorphic control property provides the means of introducing complete blocks of properties describing different realizations of a particular device function, for instance inputs and outputs. The property has a value list containing the designations of the blocks that may be introduced. When in a transaction file a polymorphic control property is assigned a value, the corresponding block follows (see examples in Tables 2 and 3).

A polymorphic control property is identified in the IEC Common Data Dictionary by the identifier in the column "Property identifier". The preferred name of a polymorphic property is "<xxxx> type", where <xxxx> is normally the derived from name of the block with which it is associated.

f) **Ref. property + Polymorphic block**
This role is similar to b) but the block concerned is created by polymorphism.

g) **Polymorphic control property with the fixed value: "<Block name from value list>"**

This property appears directly behind the polymorphic block property. It is the same property as the polymorphic control property for the block, but with the fixed value used to create the block (see IEC 61987-10).

4.2.3 Marking of polymorphic areas

To help identify the possible polymorphic blocks in a list of properties in a printable version of this standard, a number with grey background has been added to the rightmost column of the DLOP to indicate the properties associated with the block. It should be noted that in transaction file, only the polymorphic block selected from value list of the polymorphic control property would appear in the superordinate block.

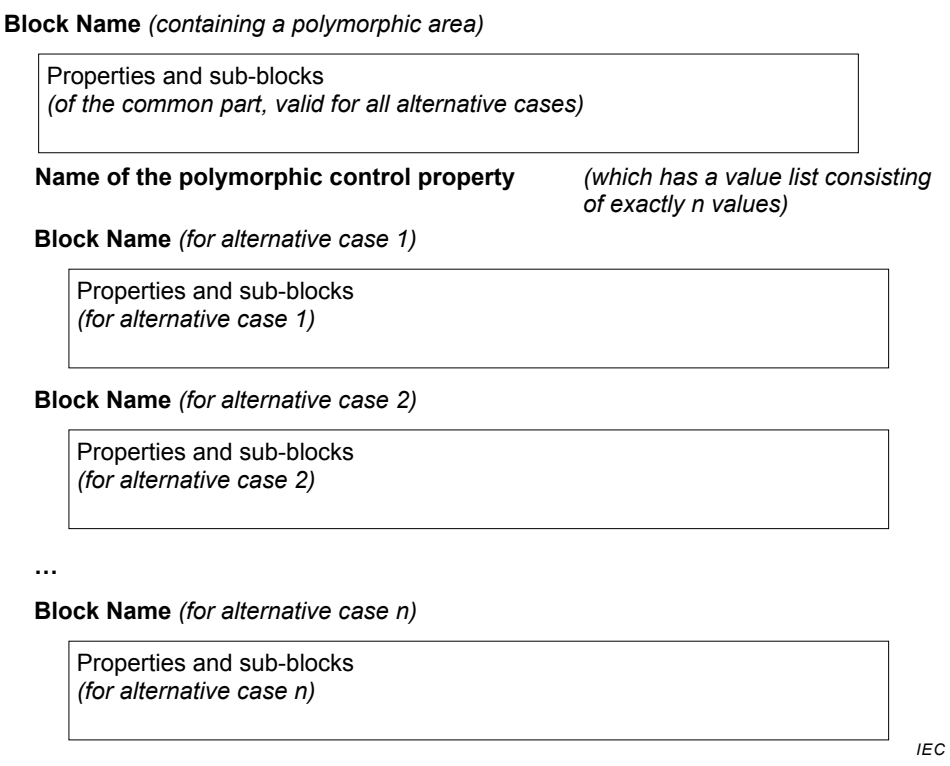

Figure 1 – Structure of a polymorphic area

Every polymorphic area corresponds to a block, the structure of which is shown in Figure 1. A polymorphic area begins with the name of this block containing this area.

The block name can be optionally followed by any number of additional properties or sub-blocks, provided that they are valid for all alternative sub-blocks that can be generated by the polymorphism.

The polymorphic control property follows, by means of which one of the alternative blocks can be selected. The alternative sub-blocks with their properties and sub-blocks are now listed one after the other.

The polymorphic area ends with the last property of the last sub-block that can be selected using the value list of the polymorphic control property.

In order to facilitate the analysis of the LOPs the following non-normative numerical marking system has been used. A polymorphic area can have one or more subordinate, polymorphic areas embedded in it. Table 1 shows the structure of the polymorphic areas implemented in the DLOPs of Annex B. In Table 1, each individual polymorphic area has been assigned a unique number. The areas have been numbered in the sequence which they occur in the LOP, not according to their level in the structure. The number of an embedded area has therefore a marking number greater than the marking number of area in which it is embedded.

For example, the majority of the content of the “Output” block is generated from the polymorphic area marked with the number 8, which starts at “Type of output” and can include any of the specializations which also are marked with the number 8. Each specialization also includes in this case a further polymorphic area, “Assigned variable” which is marked by its own number (>8).

Table 1 – Example of structure of polymorphic areas

Block name	Marking number of 1st level polymorphic area	Marking number of nested polymorphic area (2nd level)
Input

In the OLOP for flow measuring equipment, there is only one polymorphic area. It appears in the block “Phase”.

In order to make clear how the structural elements such as block, cardinality and polymorphism can be implemented using the LOPs of this standard some examples are provided in 4.3.

4.3 Examples of DLOP block usage

4.3.1 Block “Input”

A Coriolis mass flowmeter with DN25 process connections has three input variables: mass flow, density and temperature. An additional binary voltage input can be configured to operate a totalizer reset or to start/stop batching. The Input block in the DLOP is configured as shown in Table 2 (… indicates a property or properties that have not been used; grey shading indicates polymorphism).

Table 2 – Example for the “Input” block

Name of LOP type, block or property[2]	Assigned value	Unit
…

4.3.2 Block “Output”

A Coriolis mass flowmeter has three outputs: a current output, a pulse/frequency output and a relay output, comprising an NC and an NO relay. The process variable assigned to the outputs at the factory is mass flow, the default flow mass range being the measuring range. The Output block in the DLOP is configured as shown in Table 3 (only the parameters used are shown; grey shading indicates polymorphism).

Annex A
(normative)

Operating list of properties for flow measuring equipment

The considered OLOP has been created for for all types of flow measuring equipment. It is assigned to three areas of flow measuring equipment in the classification scheme for process measuring equipment (see Table A.1 in IEC 61987-11:2012):

- flow gauge IEC-ABA644
- flow switch IEC-ABA698
- flow transmitter IEC-ABA761

NOTE The OLOP is also to be found in the Properties Tree field and has the ID IEC-ABA003 .

The OLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet[4]

Annex B
(normative)

Device lists of properties for flow measuring equipment

B.1 Flow transmitter

The DLOPs of Annex B correspond to the classification scheme for measuring equipment placed in Annex A of IEC 61987-11:2012.

The DLOP for a generic flow transmitter is assigned to the node of the classification:

- generic flow transmitter IEC-ABV010

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA005.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[5]

B.2 Coriolis mass flow transmitter

The DLOP for a Coriolis mass flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- coriolis mass flow transmitter IEC-ABA763

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA006.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[5]

B.3 Thermal mass flow transmitter

The DLOP for a thermal mass flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- thermal mass flow transmitter IEC-ABA764

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA016.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[5]

B.4 Orifice/differential pressure flow transmitter

The DLOP for an orifice/differential pressure flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- Orifice plate flow meter IEC-ABA767

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA010.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[5]

---

B.5 Variable area flow transmitter/gauge

The DLOP for a variable area flow transmitter/gauge is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- variable area flow transmitter/gauge IEC-ABA771

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA020.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[6]

B.6 (Oval) gear flow transmitter/gauge

The DLOP for an (oval) gear flow transmitter/gauge is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- oval gear flow transmitter IEC-ABA785

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA013.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[6]

B.7 Helix flow transmitter/gauge

The DLOP for a helix flow transmitter/gauge is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- helix flow transmitter IEC-ABA786

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA024.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[6]

B.8 Piston flow transmitter/gauge

The DLOP for a piston flow transmitter/gauge is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- piston flow transmitter IEC-ABA788

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA014.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[6]

6 Website chaecked 2014.11.01

B.9 Electromagnetic flow transmitter

The DLOP for an electromagnetic flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- electromagnetic flow transmitter IEC-ABA792

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA008.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[7]

B.10 Electromagnetic insertion flow transmitter

The DLOP for an electromagnetic insertion flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- electromagnetic insertion flow transmitter IEC-ABA793

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA009.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[7]

B.11 Turbine/propeller/Woltmann flow transmitter/gauge

The DLOP for a turbine/propeller/Woltmann flow transmitter/gauge is assigned to the following nodes of the classification (Table A.1 of IEC 61987-11:2012):

- turbine flow transmitter IEC-ABA799
- propeller flow transmitter IEC-ABA797

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA018.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[7]

B.12 Swirl flow transmitter

The DLOP for a swirl flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- swirl flow transmitter IEC-ABA800

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA007.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[7]

7 Website checked 2014.11.01

B.13 Ultrasonic flow transmitter

The DLOP for an ultrasonic flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- ultrasonic flow transmitter IEC-ABA801

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA019.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[8]

B.14 Vortex flow transmitter

The DLOP for a vortex flow transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- vortex flow transmitter IEC-ABA802

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA022.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[8]

B.15 Positive displacement flow transmitter/gauge

The DLOP for a positive displacement flow transmitter/gauge is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- positive displacement flow gauge IEC-ABA645

NOTE The DLOP is also to be found in the Properties Tree field and has the ID IEC-ABA023.

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[8]

B.16 Remote/separate transmitter

The DLOP for a remote/separate transmitter is assigned to the following node of the classification (Table A.1 of IEC 61987-11:2012):

- remote/separate transmitter IEC-ABA882

The DLOP is available with all blocks and properties in the IEC CDD at:
http://std.iec.ch/cdd/iec61987/cdddev.nsf/TreeFrameset?OpenFrameSet.[8]

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards -based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Copyright in BSI publications

All the content in BSI publications, including British Standards, is the property of and copyrighted by BSI or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use.

Save for the provisions below, you may not transfer, share or disseminate any portion of the standard to any other person. You may not adapt, distribute, commercially exploit, or publicly display the standard or any portion thereof in any manner whatsoever without BSI's prior written consent.

Storing and using standards

Standards purchased in soft copy format:

- A British Standard purchased in soft copy format is licensed to a sole named user for personal or internal company use only.
- The standard may be stored on more than 1 device provided that it is accessible by the sole named user only and that only 1 copy is accessed at any one time.
- A single paper copy may be printed for personal or internal company use only.

Standards purchased in hard copy format:

- A British Standard purchased in hard copy format is for personal or internal company use only.
- It may not be further reproduced – in any format – to create an additional copy. This includes scanning of the document.

If you need more than 1 copy of the document, or if you wish to share the document on an internal network, you can save money by choosing a subscription product (see 'Subscriptions').

Reproducing extracts

For permission to reproduce content from BSI publications contact the BSI Copyright & Licensing team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email subscriptions@bsigroup.com.

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
