Black tea — Definition and basic requirements

bsi.

...making excellence a habit.™

National foreword

This British Standard is the UK implementation of ISO 3720:2011. It supersedes BS 6048:1987, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee AW/8, Tea.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 3720 was prepared by Technical Committee ISO/TC 34, *Food products*, Subcommittee SC 8, *Tea*.

This fourth edition cancels and replaces the third edition (ISO 3720:1986), which has been technically revised. It also incorporates the Technical Corrigenda ISO 3720:1986/Cor.1:1992 and ISO 3720:1986/Cor.2:2004.

Introduction

Tea is grown and manufactured in numerous countries of the world and is blended or drunk in many more. Black tea may be produced from tea from one garden or region or may be a blend of teas from two or more origins.

The desired characteristics of a black tea and the resulting liquor depend on many factors including the type of water to be used for brewing, whether the liquor is to be drunk with or without milk or lemon, and on individual tastes.

The objects of this International Standard are to specify the plant source from which black tea is to be manufactured and to set requirements for certain chemical characteristics which, if met, are an indication that the tea has been subjected to recognized good production practice.

It is a matter for the parties concerned whether to apply the requirements of this International Standard to a consignment or lot of black tea. The quality of teas is usually assessed by tea tasters, who base their judgements on their previous experience of tea from the producing area and their knowledge of national or regional conditions, and preferences in the consuming country. Account may be taken of characteristics such as the appearance of the tea before preparation of a liquor, the appearance of the infused leaf and the appearance, odour and taste of the liquor. An expert tea taster can assess whether a tea would be unlikely to comply with the chemical requirements. Thus, in practice, time and expense can be saved by submitting teas for chemical analysis only if the tea is considered "suspect" by a tea taster.

Black tea — Definition and basic requirements

1 Scope and field of application

This International Standard specifies the parts of a named plant that are suitable for making black tea for consumption as a beverage and the chemical requirements for black tea that are used to indicate that tea from that source has been produced in accordance with good production practice.

This International Standard also specifies the packing and marking requirements for black tea in containers.

This International Standard is not applicable to scented or decaffeinated black tea.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 1572, *Tea — Preparation of ground sample of known dry matter content*

ISO 1573, *Tea — Determination of loss in mass at 103 °C*

ISO 1575, *Tea — Determination of total ash*

ISO 1576, *Tea — Determination of water-soluble ash and water-insoluble ash*

ISO 1577, *Tea — Determination of acid-insoluble ash*

ISO 1578, *Tea — Determination of alkalinity of water-soluble ash*

ISO 1839, *Tea — Sampling*

ISO 3103, *Tea — Preparation of liquor for use in sensory tests*

ISO 5498, *Agricultural food products — Determination of crude fibre content — General method*

ISO 6078, *Black tea — Vocabulary*

ISO 9768, *Tea — Determination of water extract*

ISO 14502-1, *Determination of substances characteristic of green and black tea — Part 1: Content of total polyphenols in tea — Colorimetric method using Folin-Ciocalteu reagent*

ISO 15598, *Tea — Determination of crude fibre content*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

black tea

tea derived solely and exclusively, and produced by acceptable processes, notably withering, leaf maceration, aeration and drying, from the tender shoots of varieties of the species *Camellia sinensis* (L.) O. Kuntze, known to be suitable for making tea for consumption as a beverage

4 Basic requirements

4.1 General requirements

The tea shall have no taint and shall be reasonably free from extraneous matter. Liquor for assessment of taint shall be prepared by the method specified in ISO 3103. The assessment shall be described in the test report using terms defined in ISO 6078.

4.2 Chemical requirements

4.2.1 The tea shall comply with the requirements specified in Table 1, in which all the figures given are expressed on the basis of the material oven dried at (103 ± 2) °C by the method specified in ISO 1573.

4.2.2 No limit is specified for the “moisture” content of the tea as received. If desired, the actual loss in mass at 103 °C of the sample as received may be determined and the result recorded in the test report. In such cases, the determination shall be carried out by the method specified in ISO 1573.

Table 1 — Chemical requirements for black tea

Characteristic	Requirement	Method of test
Water extract, % mass fraction	32 min.	ISO 9768
Total ash, % mass fraction	8 max. 4 min.	ISO 1575
Water-soluble ash, % mass fraction of total ash	45 min.	ISO 1576
Alkalinity of water-soluble ash (as KOH), % mass fraction	1,0 ^a min. 3,0 ^a max.	ISO 1578
Acid-insoluble ash, % mass fraction	1,0 max.	ISO 1577
Crude fibre, % mass fraction	16,5 max.	ISO 5498 or ISO 15598 ^b
Total polyphenols, % mass fraction	9 min.	ISO 14502-1

^a When the alkalinity of water-soluble ash is expressed in terms of millimoles of KOH per 100 g of ground sample, the limits shall be: 17,8 min.; 53,6 max.

^b The specific method for the determination of crude fibre in tea is specified in ISO 15598, however for the purpose of routine estimation, the general method specified in ISO 5498 is adequate. In cases of dispute, the method of determination should always be that specified in ISO 15598. The requirement of 16,5 % mass fraction remains unchanged regardless of the method used.

5 Sampling

See ISO 1839.

6 Methods of test

6.1 The samples of tea shall be tested for conformity with the chemical requirements of this International Standard by the methods of test specified in Table 1.

6.2 The requirements specified in Table 1, except for water extract, shall be determined using a ground sample prepared in accordance with ISO 1572.

7 Packing and marking

7.1 Packing

The tea shall be packed in closed, clean and dry containers, made of material which does not affect the quality of the tea.

7.2 Marking

The packages of tea shall be marked in accordance with any relevant legal requirements and agreements between the interested parties.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use.
