front hand-guard —
Dimensions and clearances

BS ISO 6533:2012 BRITISH STANDARD

National foreword

This British Standard is the UK implementation of ISO 6533:2012. It supersedes BS ISO 6533:2001, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee AGE/29, Forestry machinery.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 6533 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 17, *Manually portable forest machinery*.

This fourth edition cancels and replaces the third edition (ISO 6533:2001), which has been technically revised primarily concerning the determination of reference point X_0 .

Forestry machinery — Portable chain-saw front handguard — Dimensions and clearances

1 Scope

This International Standard specifies the dimensions and clearances for front hand-guards and their openings on portable hand-held chain-saws. These dimensions and clearances ensure the necessary safety provided by the hand-guard, which serves as both a shield between the operator's hand and the saw chain and as an actuator for manually operated chain brakes. For chain-saws with wrap around handles, this International Standard is not applicable to the portion of the front handle to the right (when viewed from the rear) of the top brace.

2 Normative reference

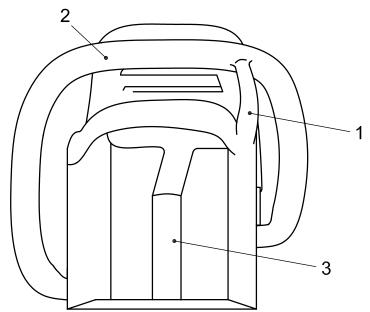

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 6531, Machinery for forestry — Portable hand-held chain-saws — Vocabulary

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 6531 apply.

 $NOTE \qquad \mbox{Figure 1} \qquad \mbox{provides an example of a chain-saw rear view}.$

Key

- 1 top brace
- 2 front handle
- 3 rear handle

Figure 1 — Example of a chain saw with a wrap around handle — Rear view

4 General

The dimensions of the front hand-guard and the clearances shall be in relation to the intended position of the left hand on the front handle during vertical cutting (bucking), determined using defined gauges (see Clause 5).

Unless otherwise specified, the following is applicable when determining the dimensions and clearances.

- a) The chain-saw shall be kept in the upright position; and the total forces applied to the guards (force on gauge plus gauge gravity force in probing direction) shall be 10 N $_{-1}^{0}$ N.
- b) If the front hand-guard also activates the chain brake, the measurements shall be made
 - 1) with the front hand guard in the position for non-activated chain brake, and
 - 2) with a force of 10 N $_{-1}^{0}$ N applied at the top edge of the guard, at 45° in a forward and downward direction relative to the guidebar centreline and 50 mm to the left of the reference point X_0 (see Clause 6), when viewed from the rear.

5 Gauge dimensions

Rigid gauges of the types and sizes specified in Table 1 shall be used to determine the dimensions and clearances.

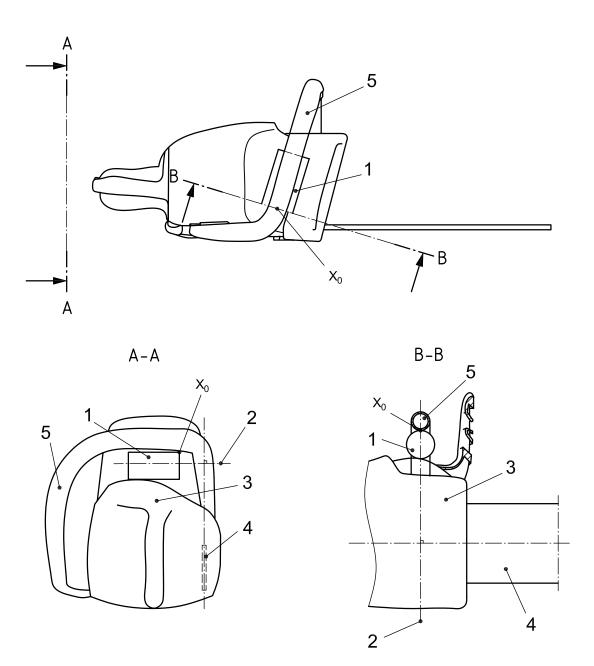

Table 1 — Gauge dimensions

Dimensions in millimetres

Gauge type	Diameter D ± 0,1 mm	Length L ± 0,1 mm	Corner radius $\begin{array}{c} r & 0 \\ r & -1 \end{array}$
A	35	100	5
В	70	100	0,5
С	56	82	0,5

6 Determination of reference point X_0

6.1 The reference point X_0 shall be determined, when viewed from the rear, using a type A gauge kept furthest to the right side of the front handle, directly below and in line with the centreline of the front handle as specified in Figure 2.

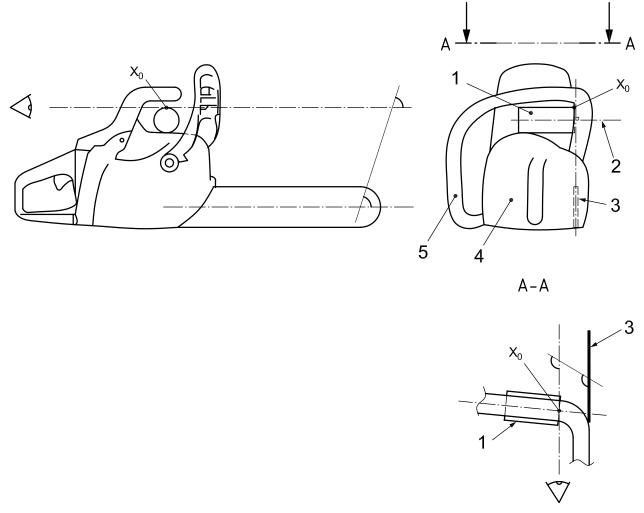

Key

- 1 type A gauge
- 2 type A gauge centreline
- 3 chain saw body
- 4 guide bar
- 5 front handle

Figure 2 — Definition of reference point X_0 when there is gauge contact between the housing and the front handle

6.2 When the machine is designed in such a way that a type A gauge of 100 mm length cannot be inserted between the handle and the housing, and X_0 cannot be determined using such a gauge, the gauge length can be shortened (though no more than necessary). Using this modified gauge, X_0 shall be determined according to all other requirements of 6.1.

6.3 If no contact between the gauge, the housing and the front handle can be achieved, then X_0 shall be determined as the intersection point, transposed to the front handle along the line of sight, between the upper right edge of the type A gauge and a virtual surface that is created by a line of sight, parallel to the guide bar centre line, following the right inner surface contour of the front handle (see Figure 3)

Key

- 1 type A gauge
- 2 type A gauge centreline
- 3 guide bar
- 4 chain saw body
- 5 front handle

Figure 3 — Definition of reference point X_0 when there is no contact between the gauge and the front handle

7 Front hand-guard dimensions

7.1 Front hand-guard width, W_1

The front hand-guard width, W_1 , is the distance from X_0 , left, to the point at which the requirement for the front hand-guard height over the front handle, H_1 and H_{1A} , respectively (see 7.2), is not fulfilled. See Figure 4.

The front hand-guard width, W_1 , shall in both cases (H_1 and H_{1A}) be at least 100 mm.

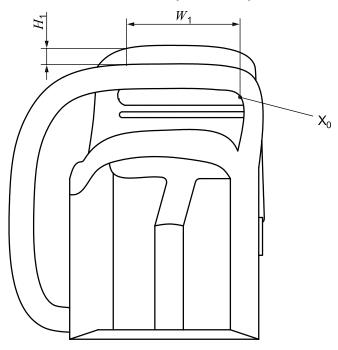

Figure 4 — Front hand-guard width, W_1 , from the rear view of the machine

7.2 Front hand-guard height over front handle, H_1 and H_{1A}

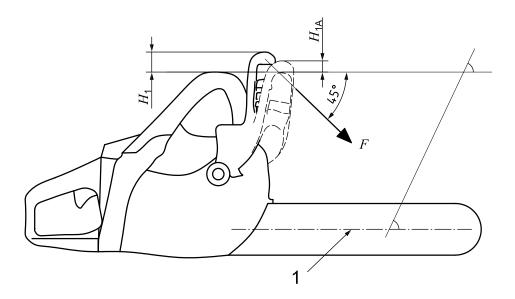

The measurement of the vertical height H_1 and H_{1A} shall be made in a plane parallel to the guide bar plane and perpendicular to the guide bar centreline (see Figure 5).

Any free play in the guide bar fixing shall be taken up by tightening the guide bar to the saw body in its uppermost position.

The height, H_1 , above top of front handle shall be at least 20 mm.

When the front hand-guard also activates the chain brake, this height shall be at least

- 20 mm with disengaged chain brake (H_1) , and
- 0 mm for engaged chain brake (H_{1A}).

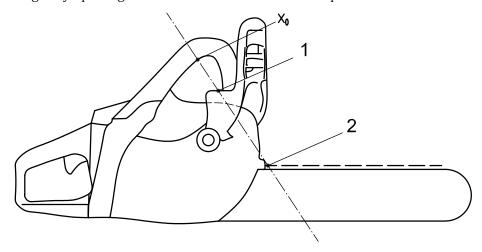

Key

1 centreline of guide bar

Figure 5 — Front hand-guard height over front handle (H_1 and H_{1A}) — Machine viewed from the right side

7.3 Line between X_0 and the rearmost part of unprotected saw chain

A line drawn from X_0 to the rearmost upper unprotected part of the saw chain on the guide bar (see Figure 6) shall be intersected by a surface determined by the outer contour of the front hand-guard and/or the housing. Any opening in this surface shall fulfil the requirements in 7.4 and Clause 8.

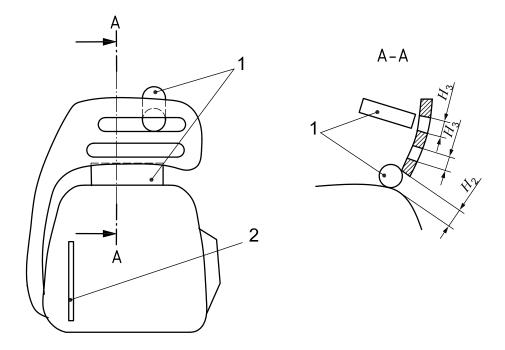

Key

- 1 intersection point
- 2 unprotected part of saw chain

Figure 6 — Line between X_0 and rearmost part of unprotected saw chain

7.4 Front hand-guard openings, H_3

The front hand-guard may have openings. Such openings shall be limited so that a type C gauge, applied in any direction and from either front or rear, cannot pass through when pushed perpendicularly toward the opening. See Figure 7.

Key

- 1 type C gauge
- 2 guide bar

Figure 7 — Front hand-guard openings, H_3 , and clearance, H_2 , between hand-guard and chain saw body — Machine front view

8 Clearance between the hand-guard and the chain saw body, H_2

The clearance, H_2 , between the lower edge of the front hand-guard and any component of the chain saw body shall be limited so that a type C gauge, held at point X_0 (see Figure 3) and held parallel to the front hand-guard, cannot pass through (see Figure 6).

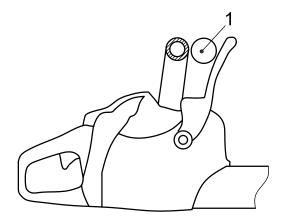

If necessary, the gauge can be applied from the front, in which case additional means could be necessary for holding the hand-guard in position.

9 Clearances between the hand-guard and the front handle

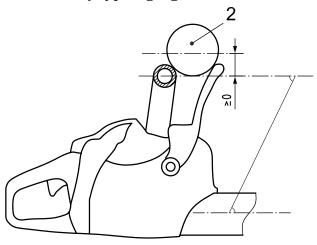

There shall be a clearance between any part of the front hand-guard and the front handle, starting from X_0 to the left when viewed from behind, such that

- a type A gauge can pass the clearance without coming into contact with the hand-guard [see Figure 8 a)], and
- a type B gauge cannot pass the clearance and any part of the gauge centreline will not come lower than any part of the centreline of the front handle [see Figure 8 b)].

Dimensions in millimetres

a) Type A gauge — Pass

b) Type B gauge — Stop

Key

- 1 type A gauge
- 2 type B gauge

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards -based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.
