BSI Standards Publication

Cranes — Training of operators

Part 3: Tower cranes

bsi.

...making excellence a habit.™

National foreword

This British Standard is the UK implementation of ISO 9926-3:2016. It supersedes BS ISO 9926-3:2005 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MHE/3/5, Mobile cranes.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword — Supplementary information](#)

The committee responsible for this document is ISO/TC 96, *Cranes*, Subcommittee SC 7, *Tower cranes*.

This second edition cancels and replaces the first edition (ISO 9926-3:2005), which has been technically revised.

ISO 9926 consists of the following parts, under the general title *Cranes — Training of operators*:

- *Part 1: General*
- *Part 3: Tower cranes*

Introduction

ISO 9926-1 specifies the minimum training to be given to trainee operators of lifting appliances with a suspended load in order to develop the person's operational basic skill in operating and to impart the knowledge required for the correct use of these appliances.

Cranes — Training of operators —

Part 3: Tower cranes

1 Scope

This part of ISO 9926 covers the specific subjects considered necessary for training tower crane operators.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 4302, *Cranes — Wind load assessment*

3 Content of training according to tower crane type

Practical and theoretical training shall take into account the following characteristics, according to tower crane type:

- a) positioning of loads;
- b) types of hoist controls, e.g. stepless contact, speed;
- c) type of jibs, e.g. horizontal jib, gooseneck jib, telescoping jib, articulating boom or luffing jib;
- d) type of erection/dismantling, e.g. cranes assembled from component parts, self-erecting tower cranes, travelling or stationary cranes, cranes climbing inside or outside the structure (theoretical procedure);
- e) special operating precautions when more than one operator is used on one crane, e.g. the last crane user has to make sure that the crane is put out of service correctly;
- f) procedures for taking the crane out of service, parking crane and leaving crane unattended including putting the jib to free slewing, applying rail clamps or any special procedure describing to in the manufacturer's instructions;
- g) making the crane ready for road transport, where applicable (theoretical procedure);
- h) the role and responsibilities of the crane operator;
- i) familiarization with national and local regulations and with special operating procedures;
- j) maintaining a safe distance from electrical power lines;
- k) operational interferences and proximity hazards;
- l) various reeving arrangements for the load block;
- m) purpose and operation of safety devices;
- n) checking of all motion limiters ;

- o) forbidden operations;
- p) daily, frequent and periodic inspection and maintenance schedules, and record-keeping requirements;
- q) detection and recording malfunctions — notifying a designated person.

4 Illiteracy and language problems

Wherever practicable, pictograms or other visual means, rather than text, should be used.

Part of the training shall familiarize the trainee with the pictograms and other visual means used.

5 Communication systems

Operators shall be trained in the use of communication systems.

For tower cranes, the following hand signals shall be defined, taking into account the national usage and standards, identifying the following controls:

- a) start of command;
- b) stop;
- c) deceleration;
- d) hoisting the load;
- e) lowering the load;
- f) direction of the load;
- g) crane travelling;
- h) emergency stop.

NOTE ISO 16715 illustrates and gives examples of different signals in usage.

Radios and hard-wired voice communication systems may be used.

6 Load curves

The load curves and the characteristics of the cranes shall be taught, including the manufacturer's information given on the rating plate fixed to the control panel.

7 Operating wind speed limits

7.1 General

Operators shall be trained to establish the maximum wind speed in service when starting the shift, taking into account the crane and its instruction manual.

7.2 Operating limits

The training shall make the operator aware of the following:

- the conditions used to determine the maximum wind speed in service (according to ISO 4302, taking into consideration the suspended load surface, in general $1 \text{ m}^2/\text{t}$);

- the need to reduce the maximum wind speed if this surface operated by the crane exceeds the design one;
- the need to control loads against pendulation and spinning;
- the dangers associated with operating tower cranes and of the different sources of information that may be available.

The trainee shall learn how to use an anemometer and to estimate the wind speeds by sight.

7.3 Putting out-of-service

The operators shall be trained to put the crane into the out-of-service conditions specified by the manufacturer. The necessary weathervaning operations shall be carried out and, if necessary, the tightening of the rail clamps.

8 Use with or without radio control

If operating by means of a radio control is required, the operator shall be trained to

- a) ensure that he/she is able to see the instructions on the rating plates,
- b) keep visual contact with the load or ensure adequate assistance, and
- c) know the procedure to take/transfer the control of the crane (in case of several radio control sets).

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.
