BSI Standards Publication

Aircraft ground equipment — Graphical symbols

bsi.

...making excellence a habit.TM

National foreword

This British Standard is the UK implementation of ISO 11532:2012.

The UK participation in its preparation was entrusted to Technical Committee ACE/57, Air cargo and ground support equipment.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 11532 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 9, *Air cargo and ground equipment*.

Avant-propos

L'ISO (Organisation internationale de normalisation) est une fédération mondiale d'organismes nationaux de normalisation (comités membres de l'ISO). L'élaboration des Normes internationales est en général confiée aux comités techniques de l'ISO. Chaque comité membre intéressé par une étude a le droit de faire partie du comité technique créé à cet effet. Les organisations internationales, gouvernementales et non gouvernementales, en liaison avec l'ISO participent également aux travaux. L'ISO collabore étroitement avec la Commission électrotechnique internationale (CEI) en ce qui concerne la normalisation électrotechnique.

Les Normes internationales sont rédigées conformément aux règles données dans les Directives ISO/CEI, Partie 2.

La tâche principale des comités techniques est d'élaborer les Normes internationales. Les projets de Normes internationales adoptés par les comités techniques sont soumis aux comités membres pour vote. Leur publication comme Normes internationales requiert l'approbation de 75 % au moins des comités membres votants.

L'attention est appelée sur le fait que certains des éléments du présent document peuvent faire l'objet de droits de propriété intellectuelle ou de droits analogues. L'ISO ne saurait être tenue pour responsable de ne pas avoir identifié de tels droits de propriété et averti de leur existence.

L'ISO 11532 a été élaborée par le comité technique ISO/TC 20, *Aéronautique et espace*, sous-comité SC 9, *Chargement et équipement au sol*.

Introduction

This International Standard is a compendium of all graphical symbols generally used on aircraft ground support equipment. Included are relevant symbols used in the automotive industry, as standard commercial chassis often form part of the equipment.

Manufacturers are encouraged to select those symbols needed for the type(s) of equipment they produce. Users of equipment can also take an excerpt from the content of this International Standard for staff training purposes depending on the equipment concerned.

Introduction

La présente Norme internationale est un collationnement de tous les symboles graphiques généralement utilisés sur des matériels au sol pour aéronefs. Elle inclut les symboles applicables utilisés dans l'industrie automobile, puisque des châssis commerciaux standard font souvent partie des matériels.

Les constructeurs sont invités à choisir les symboles qui sont nécessaires pour le(s) type(s) de matériel au sol qu'ils produisent. Les utilisateurs de matériel au sol peuvent également utiliser des extraits du contenu de la présente Norme internationale pour la formation des personnels en fonction des matériels concernés.

Aircraft ground equipment — Graphical symbols

Matériel au sol pour aéronefs — Symboles graphiques

1 Scope

1.1 This International Standard establishes common graphical symbols for use on all types of aircraft ground support equipment.

1.2 They have been compiled for the benefit of those who deal with such equipment, such as airlines, airport handling agencies, airport authorities, manufacturers, etc., in order to facilitate fast and accurate identification of controls, indicators and decals of powered and unpowered equipment.

1.3 The presentation of this International Standard is based on the recommendations of ISO/TC 145, *Graphical symbols*.

1.4 This International Standard is also intended to promote standardization of terms for controls, indicators, etc. for aircraft ground support equipment and alleviate language problems.

1.5 It is recommended that these graphical symbols be placed on all new equipment and retrofitted on all existing equipment as far as possible.

NOTE This International Standard is intended to be read with the documents listed in the bibliography.

2 General requirements

2.1 The symbols shall be as given in Clause 4, except for any deviations necessary to reproduce an accurate representation of the driver's or operator's line of sight. All symbols required are listed in Clause 4 and most are defined in ISO 7000.

1 Domaine d'application

1.1 La présente Norme internationale établit les symboles graphiques communs à utiliser sur tous les types de matériel au sol pour aéronefs.

1.2 Ils ont été compilés à l'usage des parties concernées, telles que compagnies aériennes, agents de handling des aéroports, autorités aéroportuaires, constructeurs, etc., de façon à faciliter l'identification rapide et exacte des commandes, indicateurs et affichages sur matériels motorisés ou non motorisés.

1.3 La présentation de cette Norme internationale se fonde sur les recommandations de l'ISO/TC 145, *Symboles graphiques et pictogrammes*.

1.4 La présente Norme internationale a également pour but une normalisation de termes pour commandes, indicateurs, etc. des matériels au sol pour aéronefs, et la réduction des difficultés de langage.

1.5 Il est recommandé de mettre en place ces symboles graphiques sur tous les matériels neufs, et d'en équiper si possible les matériels existants.

NOTE La présente Norme internationale est destinée à être lue conjointement avec les documents cités en bibliographie.

3 Exigences générales

2.1 Les symboles doivent être ceux donnés dans l'Article 4, à l'exception des déviations nécessaires pour reproduire une représentation exacte du champ de vision du conducteur ou de l'opérateur. Tous les symboles exigés se trouvent dans l'Article 4 et la plupart sont définis dans l'ISO 7000.

2.2 Symbols on controls and tell-tales shall contrast well with their background (preferably light symbols on a dark background).

2.3 The symbols and tell-tales shall be recognizable by the driver or operator from his usual position without causing hazard or unavoidable stress.

2.4 On equipment directly docking onto aircraft, the slow docking speed shall be identified in opposition to travel speed by the “turtle” (20.09.07.52) and “hare” (20.09.07.53) symbols defined in ISO 3287.

2.2 Les symboles sur les commandes et les cadrans doivent bien contraster avec leur fond (de préférence symboles clairs sur fond foncé).

2.3 Les symboles et cadrans doivent être reconnaissables par le conducteur ou opérateur à partir de sa position habituelle sans encourir de risque ni de malaise inévitable.

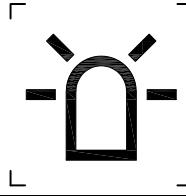

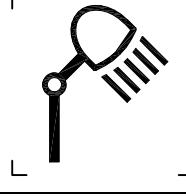

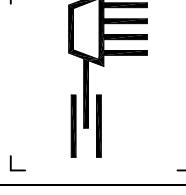

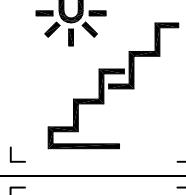

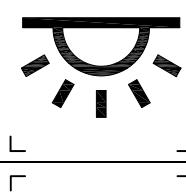

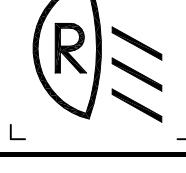

2.4 Sur le matériel accostant directement aux aéronefs, la vitesse lente d'accostage doit être identifiée vis-à-vis de la vitesse de déplacement par les symboles «tortue» (20.09.07.52) et «lièvre» (20.09.07.53) définis dans l'ISO 3287.

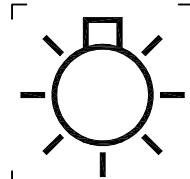

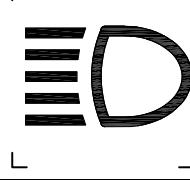

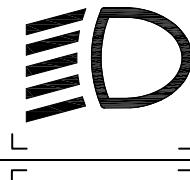

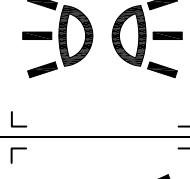

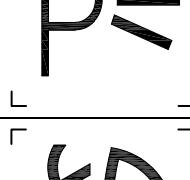

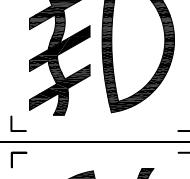

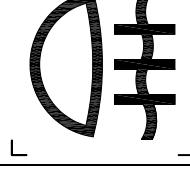

3 Designation and illustration of symbols

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

Rewvisions

Our British Standards and other publications are updated by amendment or revision. We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
