BSI Standards Publication

# Sintered metal materials excluding hardmetals — Determination of compressive yield strength

**bsi.**

...making excellence a habit.™

**National foreword**

This British Standard is the UK implementation of ISO 14317:2015. It supersedes BS ISO 14317:2006 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee ISE/65, Sintered metal components.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword — Supplementary information](#).

The committee responsible for this document is ISO/TC 119, *Powder metallurgy*, Subcommittee SC 3, *Sampling and testing methods for sintered metal materials (excluding hardmetals)*.

This second edition cancels and replaces the first edition (ISO 14317:2006), which has been technically revised.

# Sintered metal materials excluding hardmetals — Determination of compressive yield strength

## 1 Scope

This International Standard specifies a method for the determination of the compressive yield strength of sintered metal materials, excluding hardmetals.

This method is applicable to sintered materials (excluding hardmetals) that might or might not have been subjected to heat treatment after sintering and also to materials that have been sized or coined after sintering.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 7500-1, *Metallic materials — Verification of static uniaxial testing machines — Part 1: Tension/compression testing machines — Verification and calibration of the force-measuring system*

## 3 Test method

Test pieces shall be tested in compression, with a machine which has been calibrated to class 1, in accordance with ISO 7500-1. In this test, machined or compacted test cylinders are compressed axially to their yield points while measuring strain with an extensometer with an error of strain not exceeding the greater of: fixed error (0,000 2 m/m), relative error ( $\pm 0,5$  % of strain).

The top and bottom anvil contact faces shall be parallel within 0,002 mm/cm. Faces shall be polished to achieve a good finish, less than 0,4 *Ra*. To avoid imprinting, care shall be taken to ensure that contact faces are always harder than test pieces. To improve parallelism, it is acceptable practice to use an adjustable bearing block (ball and cone self-aligning device) in the test machine.

No lubrication is required between sample and anvil faces.

## 4 Test piece

The test piece shall be nominally 9,0 mm in diameter (*D*) and 27,0 mm in length (*L*); *L/D* ratio of 3:1. It shall be machined from a compacted specimen, such as the Charpy impact test bar (see ISO 5754). The compressive test specimen axis will therefore be perpendicular to the direction of compaction of the compacted specimen from which it is machined. Cylindrical end faces shall be machined to be perpendicular to the sample centre axis, within 0,005 mm/cm.

The test piece shall be cleaned prior to testing. Measure the diameter to the nearest 0,005 mm.

## 5 Procedure

**5.1** Place the test piece on end on the centre of the anvil. Close the top anvil so as to make light contact with the test piece. Engage the extensometer: gauge lengths of 12,7 mm are typical. Gauge length points shall be at least 1/2 test sample diameter away from end faces.

5.2 Loading rates shall not exceed 0,05 mm/min.

5.3 Apply load until the stress strain curve has safely passed the 0,1 % strain mark. Stop loading and then unload.

## 6 Expression of results

Assuming an initial straight line increment on the stress strain curve, draw a parallel line anchored at the bottom strain axis through the 0,1 % mark (see  $0m$  offset in [Figure 1](#)). The drawn line intersects the curve at the yield point and the yield load can be determined (see [Figure 1](#)).

In the event that the curve is not initially straight, extend the initial unload line to the strain axis. Move that line to the 0,1 % strain mark and its upper intercept ( $r$ ) will denote yield load (see [Figure 2](#)).

Calculate the compressive yield strength (cys) by dividing the load, in newtons, by area, in square millimetres, to report the result in megapascals at the 0,1 % strain level.

## 7 Test report

The test report shall include the following information:

- a) reference to this International Standard (i.e. ISO 14317);
- b) all details necessary for identification of the test sample process condition at the time of testing: machined or compacted, angularity between sample axis, and original pressing direction;
- c) the result obtained;
- d) all operations not specified in this International Standard, or regarded as optional;
- e) details of any occurrence which might have affected the result.

## 8 Precision statement

Data are under development.

**Key**

- X strain
- Y stress
- $0m$  specified offset
- $r$  upper intercept
- $R$  compressive yield strength
- A Young's modulus under compressive stress

**Figure 1 — Stress strain diagram for determination of compressive yield strength by the offset method**

**Key**

- X strain
- Y stress
- 0*m* specified offset
- r* upper intercept
- R* compressive yield strength
- A* Young's modulus under compressive stress
- a* Move parallel line to *m*, typically 0,1 %.
- b* Unload line.

# British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

## About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

## Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at [bsigroup.com/standards](http://bsigroup.com/standards) or contacting our Customer Services team or Knowledge Centre.

## Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at [bsigroup.com/shop](http://bsigroup.com/shop), where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

## Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to [bsigroup.com/subscriptions](http://bsigroup.com/subscriptions).

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

**PLUS** is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit [bsigroup.com/shop](http://bsigroup.com/shop).

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email [bsmusales@bsigroup.com](mailto:bsmusales@bsigroup.com).

## BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

## Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

## Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.
