# Road vehicles — Design and performance specifications for the WorldSID 50th percentile male side-impact dummy

Part 2: Mechanical subsystems

**bsi.**

...making excellence a habit.™

**National foreword**

This British Standard is the UK implementation of ISO 15830-2:2013. It supersedes BS ISO 15830-2:2005 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee AUE/7, Automobile occupant restraint systems.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. [www.iso.org/directives](http://www.iso.org/directives)

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. [www.iso.org/patents](http://www.iso.org/patents)

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 22, *Road vehicles*, Subcommittee SC 12, *Passive safety crash protection systems*.

This second edition cancels and replaces the first edition (ISO 15830-2:2005) which has been technically revised. Technical amendments have been incorporated throughout all four parts, resulting from extensive experience with the standard and design changes.

ISO 15830 consists of the following parts, under the general title *Road vehicles — Design and performance specifications for the WorldSID 50th percentile male side impact dummy*:

- *Part 1: Terminology and rationale*
- *Part 2: Mechanical subsystems*
- *Part 3: Electronic subsystems*
- *Part 4: User's manual*

## Introduction

This second edition of ISO 15830 has been prepared on the basis of the existing design, specifications, and performance of the WorldSID 50th percentile adult male side-impact dummy. The purpose of the ISO 15830 series is to document the design and specifications of this side-impact dummy in a form suitable and intended for worldwide regulatory use.

In 1997, ISO/TC22/SC12 initiated the WorldSID 50th percentile adult male dummy development, with the aims of defining a global-consensus side-impact dummy, having a wider range of humanlike anthropometry, biofidelity, and injury monitoring capabilities, suitable for regulatory use. Participating in the development were research institutes, dummy and instrumentation manufacturers, governments, and vehicle manufacturers from around the world.

With regard to potential regulatory, consumer information, or research and development use of ISO 15830, users will need to identify which of the permissive (i.e. optional) sensors and other elements defined in ISO 15830-3 are to be used in a given application.

WorldSID drawings in electronic format are being made available. Details are given in ISO 15830-2:2013, [Annex B](#).

In order to apply ISO 15830 properly, it is important that all four parts be used together.

# Road vehicles — Design and performance specifications for the WorldSID 50th percentile male side-impact dummy —

## Part 2: Mechanical subsystems

### 1 Scope

This part of ISO 15830 specifies requirements for mechanical components, drawings and specifications, validation tests, and support equipment for the WorldSID 50th percentile side-impact dummy, a standardized anthropomorphic dummy for side-impact testing of road vehicles. It is applicable to impact tests involving

- passenger vehicles of category M<sub>1</sub> and goods vehicles of category N<sub>1</sub>,
- impacts to the side of the vehicle structure, and
- impact tests involving use of an anthropomorphic dummy as a human surrogate for the purpose of evaluating compliance with vehicle safety standards.

### 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 6487, *Road vehicles — Measurement techniques in impact tests — Instrumentation*

ISO 15830-1, *Design and performance specifications for the WorldSID 50th percentile adult male side impact dummy — Part 1: Terminology and rationale*

ISO 15830-3:2013, *Design and performance specifications for the WorldSID 50th percentile adult male side-impact dummy — Part 3: Electronic subsystems*

ISO 15830-4, *Design and performance specifications for the WorldSID 50th percentile adult male side-impact dummy — Part 4: User's manual*

SAE J211-1:2007, *Instrumentation for impact test — Part 1: Electronic instrumentation*

SAE J2570:2001, *Performance specifications for anthropomorphic test device transducers*

49 CFR Part 572, subpart E, *Anthropomorphic test dummies, United States of America Code of Federal Regulations issued by the National Highway Traffic Safety Administration (NHTSA). Washington, DC, US*

### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 15830-1 apply.

## 4 Mechanical requirements for WorldSID

### 4.1 Head

#### 4.1.1 General description

The head assembly shall consist of the components and assemblies listed in head assembly drawing W50-10000.pdf (see [Annex B](#)).

#### 4.1.2 Drawings and specifications

- The head assembly and components shall conform to head assembly drawing W50-10000.pdf (see [Annex B](#)) and the subassembly and component drawings listed therein.
- The total assembly shall have a mass of  $4,22 \text{ kg} \pm 0,05 \text{ kg}$ .
- The centre of gravity shall be located as indicated in [Figure 1](#).
- The materials used in the construction of the head assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.
- If present, cables exiting the head assembly shall exit at the rear and include a secure strain relief mechanism.

Figure 1 — Head centre of gravity location

#### 4.1.3 Validation

When assembled according to ISO 15830-4, and tested using the procedure specified in [5.1](#), the head assembly shall meet the specifications given in [Table 1](#).

**Table 1 — WorldSID head validation specifications**

Frontal drop	
Variable	Absolute value
Peak resultant acceleration (G)	225 to 275
Peak lateral acceleration ( $a_y$ ) (G)	<15
Maximum percentage, subsequent-to-main peak (%)	<10
Lateral drop	
Variable	Absolute value
Peak resultant acceleration at CG (G)	99 to 121
Peak longitudinal acceleration ( $a_x$ ) (G)	<15
Maximum percentage, subsequent-to-main peak (%)	<10

## 4.2 Neck

### 4.2.1 General description

The neck assembly shall consist of the components and assemblies listed in neck assembly drawing W50-20000.pdf (see [Annex B](#)).

### 4.2.2 Drawings and specifications

- The neck assembly and components shall conform to neck assembly drawing W50-20000.pdf (see [Annex B](#)) and the subassembly and component drawings listed therein.
- The total assembly shall have a mass of 2,84 kg ± 0,15 kg.
- The materials used in the construction of the neck assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.
- If present, cables exiting the neck assembly shall include a secure strain relief mechanism.

### 4.2.3 Validation

When assembled according to ISO 15830-4, and tested using the procedure specified in [5.2](#), the neck assembly shall meet the specifications given in [Table 2](#).

**Table 2 — WorldSID neck validation specifications**

Variable	Absolute value
Maximum angular displacement of the head form relative to the pendulum, $\beta$ (degrees)	50 to 61
Decay time of $\beta$ to 0 degrees (ms)	58 to 72
Peak moment at occipital condyle (Nm)	55 to 68
Peak moment decay time to 0 Nm (ms) <sup>a</sup>	71 to 87
Peak forward potentiometer angular displacement (degrees)	32 to 39
Time of peak forward potentiometer angular displacement (ms) <sup>a</sup>	56 to 68
Peak rearward potentiometer angular displacement, $\theta_F$ (degrees)	30 to 37

**Table 2** (continued)

Variable	Absolute value
Time of peak rearward potentiometer angular displacement, $\theta_R$ (ms) <sup>a</sup>	56 to 68
<sup>a</sup> T=0 s at initial pendulum contact with honeycomb or alternative products which can be shown to lead to the same results.	

### 4.3 Thorax/abdomen/shoulder

#### 4.3.1 General description

The thorax/abdomen/shoulder assembly shall consist of the components and assemblies listed in thorax/abdomen/shoulder assembly drawing W50-30000.pdf (see [Annex B](#)).

#### 4.3.2 Drawings and specifications

- The thorax/abdomen/shoulder assembly and components shall conform to thorax/abdomen/shoulder assembly drawing W50-30000.pdf (see [Annex B](#)) and the subassembly and component drawings listed therein.
- The total assembly shall have a mass of 20,55 kg ± 1,0 kg.
- The materials used in the construction of the thorax/abdomen/shoulder assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.
- If present, cables exiting the thorax/abdomen/shoulder assembly shall include a secure strain relief mechanism.

#### 4.3.3 Validation

##### 4.3.3.1 Shoulder

When assembled according to ISO 15830-4, and tested using the procedure specified in [5.3.1](#) and [5.3.2](#), the shoulder assembly shall meet the specifications given in [Table 3](#).

**Table 3 — WorldSID shoulder validation specifications**

Variable	Absolute value
Peak pendulum force (kN)	2,6 to 3,3
Peak shoulder rib deflection (mm)	35 to 44

##### 4.3.3.2 Thorax with half arm

When assembled according to ISO 15830-4, and tested using the procedure specified in [5.3.1](#) and [5.3.3](#), the thorax with half-arm assembly shall meet the specifications given in [Table 4](#).

**Table 4 — WorldSID thorax with half-arm validation specifications**

Variable	Absolute value
Peak pendulum force (kN)	4,9 to 5,8
Peak T4 acceleration along y axis (G)	28 to 37
Peak T12 acceleration along y axis (G)	22 to 28
Peak thorax rib 1 deflection (mm)	35 to 47
Peak thorax rib 2 deflection (mm)	46 to 56
Peak thorax rib 3 deflection (mm)	39 to 46

#### 4.3.3.3 Thorax without arm

When assembled according to ISO 15830-4, and tested using the procedure specified in [5.3.1](#) and [5.3.4](#), the thorax without arm assembly shall meet the specifications given in [Table 5](#).

**Table 5 — WorldSID thorax without arm validation specifications**

Variable	Absolute value
Peak pendulum force (kN)	3,2 to 3,8
Peak T4 acceleration along y axis (G)	14 to 20
Peak T12 acceleration along y axis (G)	14 to 22
Peak thorax rib 1 deflection (mm)	33 to 43
Peak thorax rib 2 deflection (mm)	35 to 43
Peak thorax rib 3 deflection (mm)	32 to 40

#### 4.3.3.4 Abdomen

When assembled according to ISO 15830-4, and tested using the procedure specified in [5.3.1](#) and [5.3.5](#), the abdomen without arm assembly shall meet the specifications given in [Table 6](#).

**Table 6 — WorldSID abdomen validation specifications**

Variable	Absolute value
Peak pendulum force (kN)	2,7 to 3,1
Peak T12 acceleration along y axis (G)	15 to 20
Peak abdomen rib 1 deflection (mm)	33 to 40
Peak abdomen rib 2 deflection (mm)	30 to 36

### 4.4 Full arms

#### 4.4.1 General description

The full arm assembly may be installed on either side of the dummy. If installed, it shall consist of the components and assemblies listed in full arm assembly drawings W50-61000.pdf (left) and W50-61001.pdf (right) (see [Annex B](#)).

#### 4.4.2 Drawings and specifications

- The full arm assembly and components shall conform to full arm assembly drawings W50-61000.pdf (left) and W50-61001.pdf (right) (see [Annex B](#)) and the subassemblies and component drawings listed therein.

- The total assembly shall have a mass of 3,72 kg ± 0,15 kg.
- The materials used in the construction of the full arm assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.
- If present, cables exiting the full arm assembly shall include a secure strain relief mechanism.

## 4.5 Half arms

### 4.5.1 General description

The half arm assembly shall consist of the components and assemblies listed in half arm assembly W50-62000.pdf (see [Annex B](#)).

### 4.5.2 Drawings and specifications

- The half arm assembly shall conform to half arm assembly drawing W50-62000.pdf (see [Annex B](#)) and the subassemblies and component drawings listed therein.
- The total assembly shall have a mass of 1,77 kg ± 0,09 kg.
- The materials used in the construction of the half arm assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.

## 4.6 Lumbar spine and pelvis

### 4.6.1 General description

The lumbar spine and pelvis assembly shall consist of the components and assemblies listed in lumbar spine and pelvis assembly drawing W50-40000.pdf (see [Annex B](#)).

### 4.6.2 Drawings and specifications

- The lumbar spine and pelvis assembly shall conform to lumbar spine and pelvis assembly drawing W50-40000.pdf (see [Annex B](#)) and the subassemblies and component drawings listed therein.
- The total assembly shall have a mass of 17,75 kg ± 0,90 kg.
- The materials used in the construction of the pelvis assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.
- If present, cables exiting the pelvis assembly shall include a secure strain relief mechanism.

### 4.6.3 Validation

When assembled according to ISO 15830-4, and tested using the procedure specified in [5.3.1](#) and [5.3.6](#), the pelvis assembly shall meet the specifications given in [Table 7](#).

**Table 7 — WorldSID pelvis validation specifications**

Variable	Absolute value
Peak pelvis acceleration along y axis (G)	41 to 51
Peak pendulum force (kN)	6,3 to 7,8
Peak T12 acceleration along y axis (G)	10 to 14

## 4.7 Upper legs

### 4.7.1 General description

The upper leg assembly shall consist of the components and assemblies listed in upper leg assembly drawings W50-51000.pdf (right) and W50-51050.pdf (left) (see [Annex B](#)).

### 4.7.2 Drawings and specifications

- The upper leg assembly and components shall conform to upper leg drawings W50-51000.pdf (right) and W50-51050.pdf (left) (see [Annex B](#)) and the subassemblies and component drawings listed therein.
- The total assembly shall have a mass of 6,71 kg ± 0,30 kg.
- The materials used in the construction of the upper leg assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.
- If present, cables exiting the upper leg assembly shall include a secure strain relief mechanism.

## 4.8 Lower leg, ankle, and foot

### 4.8.1 General description

The lower leg, ankle, and foot assembly shall consist of the components and assemblies listed in lower leg, ankle, and foot assembly drawing W50-54054.pdf (right) and W50-54056.pdf (left) (see [Annex B](#)).

### 4.8.2 Drawings and specifications

- The lower leg assembly shall conform to lower leg, ankle, and foot assembly drawing W50-54054.pdf (right) and W50-54055.pdf (left) (see [Annex B](#)) and the subassemblies and component drawings listed therein.
- The total assembly shall have a mass of 5,09 kg ± 0,13 kg.
- The materials used in the construction of the lower leg assembly shall not contain lead or lead alloys.
- The flesh material and/or external surface characteristics shall enable positive attachment of adhesive targets.
- If present, cables exiting the lower leg assembly shall include a secure strain relief mechanism.

## 4.9 Clothing

### 4.9.1 General description

The clothing shall consist of the components and assemblies listed in clothing assembly drawing W50-80100.pdf (see [Annex B](#)).

#### 4.9.2 Drawings and specifications

- The clothing shall conform to clothing assembly drawing W50-80100.pdf (see [Annex B](#)) and the subassemblies and component drawings listed therein.
- The total assembly shall have a mass of 1,85 kg ± 0,09 kg.
- The materials used in the construction of the clothing shall not contain lead or lead alloys.
- The external surface characteristics shall enable positive attachment of adhesive targets.

#### 4.10 Whole dummy

- The total dummy assembly including clothing shall have a mass of 74,35 kg ± 3,74 kg.

### 5 Validation test procedures

#### 5.1 Head

##### 5.1.1 Principle

Certify the dynamic response of a head assembly by performing a 200 mm lateral drop on each side of the head and a 376 mm drop on the forehead.

##### 5.1.2 Apparatus

- 49 CFR Part 572, Subpart E, horizontal head impact surface
  - Chrome-plated rigidly supported horizontal steel plate
  - 50,8 mm x 610 mm x 610 mm
  - 8 – 80 rms micron/mm surface finish
- Head drop tool assembly (drawing W50-82100.pdf) (see [Annex B](#))
- Instrumented head assembly (drawing W50-10000.pdf) (see [Annex B](#)) including the instrumentation insert and upper neck load cell or structural replacement
- Two SHCS M6 × 12

##### 5.1.3 Sensors

Use tri-axial linear accelerometers as described in ISO 15830-3:2013, 4.1.3.2.

##### 5.1.4 Preparation

- Expose the head assembly to an environment with a temperature of 21,4 °C ± 0,8 °C and a relative humidity between 10 % and 70 % for a period of at least four hours prior to a test.
- Clean the head skin surface and the surface of the impact plate with 1,1,1 trichlorethane, isopropyl alcohol, or equivalent.
- Install the tri-axial accelerometer in the head assembly.
- Install the upper neck load cell, angular accelerometers and dual-axis tilt sensor, or their structural or mass replacements.
- Attach the head drop tool to the bottom of the upper neck load cell or its structural replacement with the two SHCS M6x12. Mount the tool for left or right lateral, or frontal drops as shown in [Figures 2](#),

3, 4, and 5. When mounted for lateral drops, position the head such that its midsagittal plane has an angle of  $35^\circ \pm 1^\circ$  with the impact surface and its anterior-posterior axis is horizontal to within  $1^\circ$ .

- Suspend the head above the drop table using the head drop tool and a quick release mechanism.
- For lateral tests, position the head so its lowest point is  $200 \text{ mm} \pm 0,25 \text{ mm}$  above the impact surface and drop the head.

For a frontal test, position the head so the lowest point on the forehead is  $376 \text{ mm} \pm 0,25 \text{ mm}$  above the impact surface.

Figure 2 — Lateral head drop angle

Figure 3 — Head bracket installation for lateral drops

Figure 4 — Frontal head drop angle

Figure 5 — Head bracket installation for frontal drops

#### 5.1.5 Procedure

- Record and filter the head accelerations from the tri-axial accelerometer according to SAE J211 and ISO 6487 Channel filter class 1000.
- Drop the head onto the rigid plate from the specified height by means that ensure quick release.
- Visually inspect the head for damage to the skin or skull, and note any such damage in the test report.

— Allow at least 2 h between successive tests on the same head.

### 5.1.6 Test report

Document the results of both the left and right lateral and the frontal drop tests.

## 5.2 Neck

### 5.2.1 Principle

Certify the dynamic response of the neck assembly by performing lateral pendulum tests.

### 5.2.2 Materials

For the pendulum stop, use aluminium honeycomb, of density  $28,8 \text{ kg/m}^3 \pm 4,90 \text{ kg/m}^3$  and dimensions 102,0 mm minimum x 102,0 mm minimum with a thickness along the cells of  $76,2 \text{ mm} \pm 4 \text{ mm}$  or alternative products which can be shown to lead to the same results.

### 5.2.3 Apparatus

- Neck assembly as specified in [4.2.1](#)
- WorldSID head form (drawing W50-83000.pdf) (see [Annex B](#))
- Neck pendulum apparatus as specified in 49 CFR Part 572, Subpart E

### 5.2.4 Sensors

Perform the test using the sensors given in [Table 8](#).

**Table 8 — Sensors for neck assembly**

Variable	Sensor	Performance
Pendulum acceleration	Single axis accelerometer Endevco 7231C-750 <sup>a</sup>	SAE J2570
Pendulum velocity	Not specified	Resolution 0,02 m/s or better
Angular displacement of forward pendulum-to-head form sliding rod, positive when doing a right side impact ( $\theta_F$ )	Angular potentiometer	SAE J2570
Angular displacement of rearward pendulum-to-head form sliding rod, positive when doing a right side impact ( $\theta_R$ )	Angular potentiometer	SAE J2570
Angular displacement of head form about forward pendulum-to-head form sliding rod, positive when doing a right side impact ( $\theta_H$ )	Angular potentiometer	SAE J2570
Neck moment, $M_x$	Upper neck load cell ISO 15830-3:2013, 4.1.3.5	SAE J2570
Neck force, $F_y$	Upper neck load cell ISO 15830-3:2013, 4.1.3.5	SAE J2570

<sup>a</sup> Accelerometer model 7231C-750 is a product supplied by Endevco Corp. San Juan Capistrano, California, USA. This information is given for the convenience of users of this International Standard and does not constitute an endorsement by ISO of the product named. Alternative products may be used if they can be shown to lead to the same results.

### 5.2.5 Preparation

Expose the neck to the conditions specified in [Table 9](#) for at least four hours prior to a test.

**Table 9 — Neck test preconditions**

Variable	Specification
Temperature (° C)	21,4 ± 0,8
Relative humidity (%)	40 ± 30

- Attach the top of the neck to the head form.
- Attach the bottom of the neck to the pendulum interface. Ensure that the screws do not protrude into the neck rubber as this may influence the response. If the screws are too long, insert washers under the head of the screw in order to prevent rubber contact. Mount the pendulum interface to the pendulum such that the head form's midsagittal plane is vertical and is perpendicular to the plane of motion of the pendulum's longitudinal centreline.
- Slide the carbon fibre rods through the potentiometer housings on the pendulum. First, slide the pivot of the potentiometer closest to the pendulum over the central steel rod in the head form, then install the small spacer ring and the second pivot. Carefully tighten the second pivot.

### 5.2.6 Procedure

- Record and filter the data according to ISO 6487 or SAE J211 Channel filter class 1000.
- Release the pendulum and allow it to fall freely from a height such that the velocity at impact is 3,4 m/s ± 0,1 m/s, measured at the centre of the pendulum-mounted accelerometer.
- Decelerate the pendulum arm using the 28,8 kg/m<sup>3</sup> aluminium honeycomb or alternative products which can be shown to lead to the same results, to achieve the pendulum pulse given in [Table 10](#).
- Allow the neck to flex without impact of the head or neck with any object other than the pendulum arm.
- Conduct the test such that the time between raising the pendulum and releasing it does not exceed 5 minutes.
- Conduct the test such that the time between any tests on the same WorldSID neck is not less than 30 minutes.

**Table 10 — Pendulum arm deceleration pulse**

Variable	Value
Velocity change at 4 ms <sup>a</sup>	0,8m/s to 1,0 m/s
Velocity change at 8 ms <sup>a</sup>	1,60 m/s to 1,9 m/s
Velocity change at 12 ms <sup>a</sup>	2,4 m/s to 3,3 m/s
<sup>a</sup> T=0 s at initial contact with honeycomb or alternative products which can be shown to lead to the same results.	

### 5.2.7 Calculation procedures

- Filter the data according to ISO 6487 or SAE J211, as given in [Table 11](#).
- Integrate the filtered and adjusted acceleration time histories.
- Calculate the flexion angle of the head form using the following formula:

$$\beta = \theta_F + \theta_H \quad (1)$$

where

- $\beta$  is the angular displacement of head form relative to the pendulum;
- $\theta_F$  is the angular displacement of forward pendulum-to-head form sliding rod, positive when doing a right side impact;
- $\theta_H$  is the lateral angular displacement of head form about forward pendulum-to-head form sliding rod, positive when doing a right side impact.

- After performing this calculation, digitally filter all angular displacements using ISO 6487 or SAE J211 CFC 180.
- Calculate the moment about the occipital condyle as  $M_{OCx} = M_x + (F_y) \times (0,019\ 5\ \text{m})$ , where the  $M_x$  and  $F_y$  polarities are in accordance with the SAE J211 sign convention.

**Table 11 — Filter specification for neck test**

Variable	Filters <sup>a</sup>
Pendulum acceleration	CFC 60
Pendulum velocity	No digital filtering
Angular displacement of forward rod ( $\theta_F$ )	CFC 1000
Angular displacement rear rod ( $\theta_R$ )	CFC 1000
Angular displacement of head form ( $\theta_H$ )	CFC 1000
Neck moment, $M_x$	CFC 600
Neck force, $F_y$	CFC 1000
<sup>a</sup> ISO 6487 or SAE J211	

### 5.2.8 Test reports

Document the results of the test.

## 5.3 Thorax/abdomen/shoulder/pelvis full body tests

### 5.3.1 Full body test setup

#### 5.3.1.1 Materials

Use Polytetrafluoroethylene (PTFE)<sup>1)</sup> sheets of sufficient size to cover seat.

#### 5.3.1.2 Apparatus

- H-Point tool (drawing W50-82500.pdf) (see [Annex B](#))
- Tilt sensor or inclinometer
- Dummy validation test bench
- Seat and back Polytetrafluoroethylene (PTFE)<sup>®</sup> sheets described in A.1

1) Teflon<sup>®</sup> is a commercial product. This information is given for the convenience of users of this International Standard and does not constitute an endorsement of the product named. Alternative products may be used if they can be shown to lead to the same results.

### 5.3.1.3 Preparation

Expose the dummy, clothed in its suit, to the conditions given in [Table 12](#) for at least four hours prior to a test.

**Table 12 — Dummy full body test preconditions**

Variable	Value
Temperature (° C)	21,4 ± 0,8
Relative humidity (%)	40 ± 30

### 5.3.1.4 Setup procedure

- Install the H-point tool.
- Install dual axis tilt sensors in the head, thorax, and pelvis to check the angles about x and y direction.
- Cover the seat back and base with Polytetrafluoroethylene (PTFE)® sheets.
- Seat the dummy on the rigid seat as shown in [Figure 6](#) and [Figure 7](#).
- Place the dummy on the seat and position it using either mechanical measurements on a dummy component or tilt sensors to verify the positions. The relationship between mechanical angle measurements and the tilt sensors are given in [Table 13](#).
- Position the dummy according to the criteria given in [Table 14](#).

**Table 13 — Relationship between mechanical measurement indicators and the tilt sensors**

Location	Mechanical reference	Tilt sensor (angular displacement about the noted axis)
Head zero	Landmark on head is horizontal	X: 0°, Y: 0°
Thorax zero	Top of the lower neck bracket is horizontal	X: 0°, Y: 0°
Pelvis zero	X angle zero degree H-point tool oriented at 45° below horizontal (Y)	X: 0°, Y: 14,5°

**Table 14 — Dummy set up criteria**

Variable	Criteria	Sensor readings
Thorax angle	0° ± 2°	
Pelvic orientation	5° ± 2° <sup>a</sup>	This pelvic orientation is coincident with H-point tool at 40° ± 2° below horizontal, and a pelvic tilt sensor at 19,5° ± 2°
Distance between knee centres	279 mm ± 50 mm	

<sup>a</sup> Due to the low friction of the Polytetrafluoroethylene (PTFE)® pieces, the dummy is not able to sit at zero pelvis angle. Five degrees is an achievable angle on the test bench.

**Figure 6 — Front view of setup for full dummy validation tests**

**Figure 7 — Side view of setup for full dummy validation tests**

Figure 8 — Using an inclinometer with the H-point tool to check pelvis angle

### 5.3.2 Shoulder test

#### 5.3.2.1 Principle

Perform a test involving a lateral impact to the shoulder in order to certify the dynamic response of the shoulders.

#### 5.3.2.2 Apparatus

Use 49 CFR Part 572, subpart E Hybrid III 50th percentile adult male dummy pendulum (23,4 kg, 152,4 mm face diameter).

#### 5.3.2.3 Sensors

Install instrumentation to obtain data for the items given in [Table 15](#).

Table 15 — Sensors for shoulder test

Variable	Sensor	Performance
Peak pendulum acceleration (G)	See <a href="#">Table 8</a>	Per SAE J2570
Peak shoulder rib deflection (mm)	IR-TRACC ISO 15830-3:2013, 4.1.3.6	See sensor specification details on electronic drawing number IF-363 (see <a href="#">Annex B</a> )
Impact velocity (m/s)	Not specified	Resolution 0,02 m/s or better

#### 5.3.2.4 Procedure

- Set up the dummy in standard test posture as described in [5.3.1](#) with the half arm aligned horizontal on the impact side as shown in [Figure 9](#).

- Align the pendulum centreline with the centreline of the shoulder y-axis rotation point.
- Raise the pendulum to achieve a  $4,3 \text{ m/s} \pm 0,1 \text{ m/s}$  impact velocity.
- Release the pendulum to impact the dummy.

**Figure 9 — Shoulder test, dummy and arm position**

#### 5.3.2.5 Calculation procedures and expression of results

- Filter the data according to ISO 6487 or SAE J211, as given in [Table 16](#).
- Calculate the pendulum impactor force by multiplying the pendulum acceleration time history by the measured impactor mass.
- Graph the time histories of impactor force and shoulder deflection.

**Table 16 — Filter specifications for shoulder test**

Variable	Filter
Pendulum acceleration (G)	CFC 180
Shoulder deflection (mm)	CFC 600

#### 5.3.2.6 Test reports

Document the results of the test.

### 5.3.3 Thorax with half arm

#### 5.3.3.1 Principle

Perform a test involving a lateral impact to the thorax with the half arm in order to certify the dynamic response of the thorax.

### 5.3.3.2 Apparatus

Use 49 CFR Part 572, subpart E Hybrid III 50th percentile adult male dummy pendulum (23,4 kg, 152,4 mm face diameter).

### 5.3.3.3 Sensors

Install instrumentation in order to obtain data for the items given in [Table 17](#).

**Table 17 — Sensor specifications for thorax with half arm test**

Variable	Sensor	Performance
Peak pendulum acceleration (G)	See <a href="#">Table 8</a>	SAE J2570
Peak upper spine (T4) y-axis acceleration (G)	Tri-axial linear accelerometer ISO 15830-3:2013, 4.1.3.2	SAE J2570
Peak lower spine (T12) y-axis acceleration (G)	Tri-axial linear accelerometer ISO 15830-3:2013, 4.1.3.2	SAE J2570
First, second, and third thorax rib deflections (mm)	IR-TRACC ISO 15830-3:2013, 4.1.3.6	See sensor specification details on electronic drawing number IF-363 (see <a href="#">Annex B</a> )
Impact velocity (m/s)	Not specified	Resolution 0,02 m/s or better

### 5.3.3.4 Procedure

- Set up the dummy in standard test posture as described in [5.3.1](#) with the half arm parallel to the thorax.
- Align the pendulum centreline with the centreline of the middle thorax rib.
- Raise the pendulum to achieve a  $6,7 \text{ m/s} \pm 0,1 \text{ m/s}$  impact velocity.
- Release the pendulum to impact the dummy.

### 5.3.3.5 Calculation procedures and expression of results

- Filter the data according to ISO 6487 or SAE J211, as given in [Table 18](#).
- Calculate the pendulum impactor force by multiplying the pendulum acceleration time history by the measured impactor mass.
- Plot the time histories of impactor force, T4 and T12 y-axis accelerations, and deflections of thorax ribs 1, 2, and 3.

**Table 18 — Filter specifications for thorax with half arm test**

Variable	Filter
Peak pendulum acceleration (G)	CFC 180
Peak T4 y-axis acceleration (G)	CFC 180
Peak T12 y-axis acceleration (G)	CFC 180
Peak thorax rib 1 deflection (mm)	CFC 600
Peak thorax rib 2 deflection (mm)	CFC 600
Peak thorax rib 3 deflection (mm)	CFC 600

### 5.3.3.6 Test reports

Document the results of the test.

### 5.3.4 Thorax without arm

#### 5.3.4.1 Principle

Perform a test involving a lateral impact to the thorax without the arm in order to certify the dynamic response of the thorax.

#### 5.3.4.2 Apparatus

Use 49 CFR Part 572, subpart E Hybrid III 50th percentile adult male dummy pendulum (23,4 kg, 152,4 mm face diameter).

#### 5.3.4.3 Sensors

Install instrumentation to obtain data for the items given in [Table 19](#).

**Table 19 — Sensor specifications for thorax without arm test**

Variable	Sensor	Performance
Peak pendulum acceleration (G)	See <a href="#">Table 8</a>	SAE J2570
Peak upper spine (T4) y-axis acceleration (G)	Tri-axial linear acceleration ISO 15830-3:2013, 4.1.3.2	SAE J2570
Peak lower spine (T12) y-axis acceleration (G)	Tri-axial linear acceleration ISO 15830-3:2013, 4.1.3.2	SAE J2570
First, second, and third thorax rib deflections (mm)	IR-TRACC ISO 15830-3:2013, 4.1.3.6	See sensor specification details on electronic drawing number IF-363 (see <a href="#">Annex B</a> )
Impact velocity (m/s)	Not specified	Resolution 0,02 m/s or better

#### 5.3.4.4 Procedure

- Set up the dummy without arm in standard test posture as described in [5.3.1](#).
- Raise the arm to a vertical orientation as shown in [Figure 10](#).
- Align the pendulum centreline with the centreline of the middle thorax rib.
- Raise the pendulum to achieve a  $4,3 \text{ m/s} \pm 0,1 \text{ m/s}$  impact velocity.
- Release the pendulum to impact the dummy.

**Figure 10 — Thorax test without arm, dummy and arm position**

#### 5.3.4.5 Calculation procedures and expression of results

- Filter the data according to ISO 6487 or SAE J211, as given in [Table 20](#).
- Calculate the pendulum impactor force by multiplying the pendulum acceleration time history by the measured impactor mass.
- Graph the time histories of impactor force, T4 and T12 y-axis accelerations, and deflections of thorax ribs 1, 2, and 3.

**Table 20 — Filter specifications for thorax without half arm test**

Variable	Filter
Peak pendulum acceleration (G)	CFC 180
Peak T4 y-axis acceleration (G)	CFC 180
Peak T12 y-axis acceleration (G)	CFC 180
Peak thorax rib 1 deflection (mm)	CFC 600
Peak thorax rib 2 deflection (mm)	CFC 600
Peak thorax rib 3 deflection (mm)	CFC 600

#### 5.3.4.6 Test reports

Document the results of the test.

### 5.3.5 Abdomen test

#### 5.3.5.1 Principle

Perform a test involving a lateral impact to the abdomen in order to certify the dynamic response of the abdomen ribs.

### 5.3.5.2 Apparatus

Use the following items:

- 49 CFR Part 572, subpart E Hybrid III 50th percentile adult male pendulum (23,4 kg, 152,4 mm face diameter).
- Simulated armrest consisting of a rigid hardwood block as given in [Table 21](#) attached to the impact face of the pendulum. The centreline of the armrest simulator shall be aligned with the centreline of the pendulum.

**Table 21 — Simulated armrest specifications**

Variable	Value
Width (mm)	150 ± 0,5
Height (mm)	70 ± 0,5
Depth (mm)	60 ± 0,5
Corner radius (mm)	10 ± 1
Mass (kg)	1,00 ± 0,01

### 5.3.5.3 Sensors

Install instrumentation in order to obtain data for the items given in [Table 22](#).

**Table 22 — Sensor specifications for abdomen test**

Variable	Sensor	Performance
Pendulum acceleration (G)	See <a href="#">Table 8</a>	SAE J2570
Lower spine (T12) y-axis acceleration (G)	Tri-axial linear accelerometer ISO 15830-3:2013, 4.1.3.2	SAE J2570
Abdomen rib 1 and 2 deflections (mm)	IR-TRACC ISO 15830-3:2013, 4.1.3.6	See sensor specification details on electronic drawing number IF-363 (see <a href="#">Annex B</a> )
Impact velocity (m/s)	Not specified	Resolution 0,02 m/s or better

### 5.3.5.4 Procedure

- Set up the dummy in standard test posture as described in [5.3.1](#) with the half arm in the driving posture as shown in [Figure 6](#).
- Align the wood block face so it is aligned with and parallel to the middle of the two abdomen ribs.
- Place the wood block in contact with the side of the dummy.
- Raise the pendulum to achieve a 4,3 m/s ± 0,1 m/s impact velocity.
- Release the pendulum to impact the dummy.

### 5.3.5.5 Calculation procedures and expression of results

- Filter the data according to ISO 6487 or SAE J211-1, as given in [Table 23](#).
- Calculate the pendulum impactor force by multiplying the pendulum acceleration time history by the combined measured mass of the pendulum and armrest simulator.

- Graph the time histories of impactor force, T12 y-axis acceleration, and deflections of abdomen ribs 1 and 2.

**Table 23 — Filter specifications for abdomen test**

Variable	Filter
Pendulum acceleration (G)	CFC 180
T12 y-axis acceleration (G)	CFC 180
Abdomen rib 1 deflection (mm)	CFC 600
Abdomen rib 2 deflection (mm)	CFC 600

### 5.3.5.6 Test reports

Document the results of the abdomen test.

### 5.3.6 Pelvis test

#### 5.3.6.1 Principle

Perform a test involving a lateral impact to the pelvis in order to certify the dynamic response of the pelvis.

#### 5.3.6.2 Apparatus

Use 49 CFR Part 572, subpart E Hybrid III 50th percentile adult male dummy pendulum (23,4 kg, 152,4 mm face diameter).

#### 5.3.6.3 Sensors

Install instrumentation to obtain data for the items given in [Table 24](#).

**Table 24 — Sensor specifications for pelvis test**

Variable	Sensor	Performance
Pendulum acceleration (G)	See <a href="#">Table 8</a>	SAE J2570
Lower spine (T12) y-axis acceleration (G)	Tri-axial linear accelerometer ISO 15830-3:2013, 4.1.3.2	SAE J2570
Pelvis acceleration (G)	Tri-axial linear accelerometer ISO 15830-3:2013, 4.1.3.2	SAE J2570
Impact velocity (m/s)	Not specified	Resolution 0,02 m/s or better

#### 5.3.6.4 Procedure

- Set up the dummy with half arm in standard test posture as described in [5.3.1](#).
- Align the pendulum centreline with the H-point.
- Raise the pendulum to achieve a 6,7 m/s ± 0,1 m/s impact velocity.
- Release the pendulum to impact the dummy.

#### 5.3.6.5 Calculation procedures and expression of results

- Filter the data according to ISO 6487 or SAE J211-1, as given in [Table 25](#).

- Calculate the pendulum impactor force by multiplying the pendulum acceleration time history by the measured impactor mass.
- Graph the time histories of impactor force, pelvis, and T12 y-axis accelerations.

**Table 25 — Filter specifications for pelvis test**

Variable	Filter
Pendulum acceleration (G)	CFC 180
T12 y-axis acceleration (G)	CFC 180
Pelvis y-axis acceleration (G)	CFC 180

#### 5.3.6.6 Test reports

Document the results of the pelvis test.

#### 5.4 Data zero values

For all validation tests, set all data channels to a zero value at the time of initial contact of the moving component with the stationary component.

When using IR-TRACC sensors, due to the nonlinear input-output relationship, the voltage should be converted to engineering units before setting the data channel to zero as required above.

## Annex A (normative)

### Support equipment

#### A.1 Specialized WorldSID support equipment

Specialized WorldSID support equipment needed for WorldSID assembly, handling, or validation testing shall consist of the items given in [Table A.1](#).

**Table A.1 — Specialized WorldSID support equipment**

Reference	Description	Use	Part number <sup>b</sup>	Reference
5.1	Head drop tool	Validation	W50-82100	<a href="#">Annex B</a>
5.2	Head form	Validation	W50-83000	<a href="#">Annex B</a>
5.1	Head sensor extension cables for head drop test	Validation	Custom <sup>a</sup>	<a href="#">Annex B</a>
5.2	Head form rotational potentiometers, quantity of three	Validation	F_1A	
5.2	Carbon rods for potentiometers	Validation	F_GL	
5.2	Circular section neck buffers with different hardness	Validation	W50-20006	<a href="#">Annex B</a>
5.2	Neck and head form sensor extension cables for neck test	Validation	Custom <sup>a</sup>	
5.3	H-Point tool	Test setup	W50-82500	<a href="#">Annex B</a>
5.3	Polytetrafluoroethylene (PTFE)® covered dummy validation test bench	Validation	W50-82200	<a href="#">Annex B</a>
5.3	Small Polytetrafluoroethylene (PTFE)® sheets for the seat and back	Validation	W50-82244 W50-82245	<a href="#">Annex B</a>
	Modified spanner wrench, 25 mm to 28 mm dia.	Assembly	W50-51001	<a href="#">Annex B</a>
	Spanner wrench, 40 mm to 42 mm dia.	Assembly	W50-51002	<a href="#">Annex B</a>
	Modified hex key wrench	Assembly	W50-51003	<a href="#">Annex B</a>
	Modified 22 mm open-end wrench	Assembly	W50-51004	<a href="#">Annex B</a>
	Shortened 6 mm hex key 15 mm long	Assembly	W50-20018	<a href="#">Annex B</a>
	C-wrench for hip joint	Assembly	W50-42521	<a href="#">Annex B</a>
	Lifting mechanism	Handling	W50-84100 <sup>a</sup>	<a href="#">Annex B</a>
<sup>a</sup> This equipment may need to be customized for each lab.				
<sup>b</sup> Part numbers correspond to electronic drawing numbers (see <a href="#">Annex B</a> ).				

#### A.2 Other support equipment typically available in test laboratories

Other dummy support equipment needed for WorldSID validation and typically available in test laboratories shall be as given in [Table A.2](#).

**Table A.2 — Other standard support equipment**

<b>Reference</b>	<b>Description</b>	<b>Use</b>
5.1	49 CFR Part 572, Subpart E horizontal head impact surface	Validation
5.1	Quick release mechanism	Validation
5.2	49 CFR Part 572, Subpart E neck pendulum apparatus	Validation
5.2	49 CFR Part 572, Subpart E pendulum decelerating aluminium honeycomb or alternative products which can be shown to lead to the same results	Validation
5.2	Neck bending pendulum accelerometer, Endevco 7231C-750 <sup>a</sup>	Validation
5.3	49 CFR Part 572, subpart E Hybrid III 50th percentile adult male dummy pendulum (23,4 kg with 6 in. dia.)	Validation
5.3	49 CFR Part 572, subpart E Hybrid III 50th percentile adult male dummy pendulum accelerometer, Endevco 7231C-750 <sup>a</sup>	Validation
E.BF	Neck compression wrench	Assembly
<sup>a</sup> Accelerometer model 7231C-750 is a product supplied by Endevco Corporation, San Juan Capistrano, California, USA. This information is given for the convenience of users of this International Standard and does not constitute an endorsement by ISO of the product named. Alternative products may be used if they can be shown to lead to the same results.		

## **Annex B** (normative)

### **Drawings and specifications, PDF, and STP files**

The WorldSID shall be fabricated according to the drawings and specifications contained in the electronic PDF and STP files which may be obtained by contacting the WorldSID Task Group or ISO TC22/SC12/WG5.

## Annex C (informative)

### Drawing list

This annex lists the WorldSID drawings in [Table C.1](#) and fasteners in [Table C.2](#) for the convenience of users. The drawings are available electronically (see [Annex B](#)).

# British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

## About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

## Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at [bsigroup.com/standards](http://bsigroup.com/standards) or contacting our Customer Services team or Knowledge Centre.

## Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at [bsigroup.com/shop](http://bsigroup.com/shop), where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

## Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to [bsigroup.com/subscriptions](http://bsigroup.com/subscriptions).

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

**PLUS** is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit [bsigroup.com/shop](http://bsigroup.com/shop).

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email [bsmusales@bsigroup.com](mailto:bsmusales@bsigroup.com).

## Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

## Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI. Details and advice can be obtained from the Copyright & Licensing Department.
