Microscopes — Minimum requirements for binocular tubes

bsi.

...making excellence a habit.™

National foreword

This British Standard is the UK implementation of ISO 19055:2015.

The UK participation in its preparation was entrusted to Technical Committee CPW/172, Optics and Photonics.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

ISBN 978 0 580 84940 4

ICS 37.020

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 30 September 2015.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information

The committee responsible for this document is ISO/TC 172, *Optics and photonics*, Subcommittee SC 5, *Microscopes and endoscopes.*

INTERNATIONAL STANDARD ISO 19055:2015(E)

Microscopes — Minimum requirements for binocular tubes

1 Scope

This International Standard specifies the minimum requirements regarding image quality and viewing ergonomics for binocular tubes for compound microscopes when used with eyepieces as specified by the manufacturer. This International Standard makes a distinction between binocular tubes with and without dioptre adjustment.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 15227:2000, *Optics and optical instruments — Microscopes — Testing of stereomicroscopes*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1
interpupillary distance
IPD
distance between the exit pupils of the left and right optical system

3.2
optical axis
axis given by the central ray of the pencil exiting the eyepiece for an object point in the centre of the object plane

3.3
convergence
describes the situation when the optical axis for the left and right optical systems meet at a position further away from the eye than the eyepiece

Note 1 to entry: Binocular tubes for compound microscopes usually have parallel optical axes for the left and right optical systems.

3.4
imaging rotation
orientation of the image with respect to the optical axis as the axis of rotation

3.5
relative brightness
brightness of the darker of the two optical systems divided by the brightness of the lighter of the two optical systems

Note 1 to entry: The requirement in Table 3 shall be fulfilled for any state of polarization.

Note 2 to entry: It is expressed in percentage (%).

4 Requirements

The requirements specified in Tables 1, 2, and 3 are the minimum requirements for opto-mechanical and radiation specifications of binocular tubes.

Table 1 makes a distinction between tubes for general use and high-performance tubes.

NOTE Tubes for general use fulfil the basic criteria for microscopic applications. High-performance tubes provide increased viewing ergonomics when used over prolonged time periods.

The values shall be met by any individual tube which claims compliance with this International Standard.

For the specified minimum adjustment range for IPD, all requirements shall be met.

Tubes with dioptre adjustment shall meet the requirements in Table 1, 2, and 3.

Tubes without dioptre adjustment shall meet the requirements in Table 1 and Table 3.

</table>

Table 2 — Additional opto-mechanical requirements for tubes with dioptre adjustment

Criterion	Requirement	Test method
Minimum range of dioptre adjustment	−5 *D* to +5 *D*	ISO 15227:2000, 6.3.13
Difference in axial position between left and right image at 0 *D*	±0,5 mm	A.6

Table 3 — Radiation requirements

Criterion	Requirement	Test method
Relative brightness	≥65 %	A.7

Annex A
(normative)

Test methods for binocular tubes

A.1 Minimum adjustment range for IPD

The IPD shall be measured as the distance of the centres of the exit pupils of the two eyepieces.

A.2 Indication error of IPD scale

The indication error is the difference between the quantity measured in A.1 and the marked IPDs on the binocular tube.

A.3 Difference in centres between left and right image

A reference eyepiece with crosshairs is inserted into the left eyepiece sleeve and a specimen with crosshairs is focused. The specimen is laterally adjusted so the crosshairs of the eyepiece and the specimen are aligned.

The reference eyepiece is then inserted into the right sleeve and the distance between the eyepiece crosshairs and the specimen crosshairs in vertical and horizontal direction is measured.

A.4 Difference in axial position between left and right image

A focusable reference eyepiece set to its nominal focus position is inserted in the left eyepiece sleeve and a specimen is focused.

The reference eyepiece is then inserted into the right sleeve. The eyepiece is axially adjusted until the specimen is focused and the resulting axial adjustment is measured.

A.5 Difference in exit pupil position between left and right optical system

The exit pupil position shall be measured perpendicular to the surface defined by the eyepiece location flange of the left optical system.

For tubes with dioptre adjustment, this quantity shall be measured at 0 *D* at the dioptre scale.

A.6 Difference in axial position between left and right image at 0 *D*

The eyepiece sleeve with dioptre adjustment is set to 0 *D* and the same measurement as in A.4 is performed.

A.7 Relative brightness

The brightness shall be measured with a light source of type D65 located in the nominal entrance pupil of the tube. The light source shall be of circular shape and be at least 8 mm in diameter. The measurements shall be carried out in the exit pupils of the eyepieces.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards -based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
