

Glossary of

Terms used in terotechnology

Committees responsible for this British Standard

The preparation of this British Standard was entrusted by the Quality, Management and Statistics Standards Policy Committee (QMS/-) to Technical Committee QMS/34, upon which the following bodies were represented:

British Council of Maintenance Associations
Building Services Research and Information Association
Chartered Institute of Management Accountants
Chartered Institution of Building Services Engineers
Consumer Policy Committee of BSI
Electricity Association
Federation of Small Businesses
Institute of Logistics
Institute of Quality Assurance
Institution of Incorporated Executive Engineers
Institution of Plant Engineers
Ministry of Defence
Power Generation Contractors' Association — PGCA (BEAMA Ltd.)
Royal Institution of Chartered Surveyors

This British Standard, having been prepared under the direction of the Quality, Management and Statistics Standards Policy Committee, was published under the authority of the Standards Board and comes into effect on 15 December 1993

© BSI 1993

First published October 1964
Second edition November 1974
Third edition March 1984
Fourth edition December 1993

Foreword

This British Standard has been prepared under the direction of the Quality, Management and Statistics Standards Policy Committee. It is a revision of BS 3811 : 1984 which is withdrawn.

The first edition of BS 3811, published in 1964, dealt with the general terminology used in a maintenance organization. The second edition of 1974 and the third edition of 1984 defined 47 and 173 terms respectively and concentrated on the terminology used by maintenance managers in the context of terotechnology. Maintenance and management of the maintenance function continue to be very important facets of terotechnology, therefore this standard defines a comprehensive list of maintenance terms. The scope of this revision of BS 3811 is not however restricted to maintenance terminology; it has been greatly expanded to encompass the wide range of techniques encountered in the application of terotechnology. Further guidance on these techniques is given in BS 3843 : Parts 1, 2 and 3.

In recent years there have been significant developments in statutory and other requirements, for example, in the field of environmental management, and the relevant terms have been included in this standard where applicable.

Since the last revision of BS 3811, many glossaries have undergone major revisions, especially international glossaries. In common with these other glossaries, this revision of BS 3811 seeks to ensure, as far as possible, that definitions of terms are aligned with those agreed in international standards such as the International Electrotechnical Vocabulary (IEV).

Where no precedence currently exists in international standards, commonality with relevant British Standard glossaries has been sought as far as possible. Reference to these glossaries is made in this standard where applicable.

Use of the term 'defect.' This standard quotes from BS 4778 : Section 3.2 : 1991, which is identical with the International Electrotechnical Vocabulary, Chapter 191 (IEC 50(191) : 1991), the definition of 'defect'. It is crucial to note that the term 'defect' has recently been adopted in legislation and, in every case, relates to the lack of safety. Due to these legal connotations it is recommended that the term 'defect' should be used with extreme care. It should *not* be used in any document or note (even a personal note), except in circumstances where the legal definition is clearly and unarguably applicable.

Throughout this standard use of the pronouns he, him and his is intended to be non-gender specific.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Introduction

An essential requirement for the effective implementation of terotechnology is that all departments of the organization concerned and all personnel of the various professional disciplines should contribute to corporate decision making. To achieve this, the participants in the decision making process need to have a proper mutual appreciation of their respective tasks and requirements and they need to communicate with people at all levels of the organization. The purpose of this standard is to ensure that such communications are correctly understood by promoting the use of a standardized terminology for the application of terotechnology.

Terotechnology has a very wide remit and calls for the implementation of all disciplines aimed at improving performance. Many of these disciplines, such as management services, have been dealt with in depth in other British and international standards, and glossaries already exist for these subjects. This standard defines the principal terms likely to be encountered by a manager taking a terotechnological overview. If greater depth of understanding of these disciplines is required, the detailed glossaries of the subjects concerned should be consulted. Such standards are listed in annex A.

The terms in this standard are arranged in a classified order, each term having an individual number consisting of four digits. The first digit represents the number of the section and the other three digits represent the place the term occupies within that section.

Section 1 contains the fundamental definition of terotechnology, together with the definitions of the generic terms that are used extensively in BS 3843. The other terms used in terotechnology, which are wide ranging, have been allocated to sections 2 to 6. Each of these sections covers the terms normally encountered in a specific phase of a project as follows:

- section 1 defines the fundamental and generic terms that are used in terotechnology;
- section 2 defines terms that initially arise in the concept and acquisition phases;
- section 3 defines operational terms pertaining to the useful life phase;
- section 4 defines maintenance terms pertaining to the useful life phase;
- section 5 defines terms relating to the end of life of the project;
- section 6 defines terms that are not related to any specific phase of a project.

To ensure the widest possible agreement on terms and definitions it is essential that, where a term and its definition already exist in an international glossary, it should be promoted nationally. This

standard has therefore adopted the appropriate IEC or ISO definition where applicable. In the fields of availability, reliability and maintainability the principal source was IEV Chapter 191 (IEC 50(191) : 1991), which is identical with BS 4778 : Part 3 : Section 3.2 : 1991. Similarly for quality terms, the authoritative source was ISO 8402 : 1986, which is identical with BS 4778 : Part 1 : 1987. Where terms are not contained in an international standard, but have already been defined in a British Standard these have also been used to form the definitions given in this standard. Wherever in this standard such a source has been indicated, it is the basis of the definition given and in many cases the definition in the source document is given verbatim. In this standard the sources of individual definitions are given in the column headed 'Source' by codes that have the following meanings:

2382/1	BS ISO/IEC 2382/1 : 1984
2382-12	BS ISO/IEC 2382-12 : 1988
3138	BS 3138 : 1992
3811	BS 3811 : 1984 (withdrawn)
4335	BS 4335 : 1987
4778/1	BS 4778 : Part 1 : 1986 (identical with ISO 8402 : 1986)
4778/2	BS 4778 : Part 2 : 1991
4778/3.1	BS 4778 : Section 3.1 : 1991
4778/3.2	BS 4778 : Section 3.2 : 1991 (identical with IEV, Chapter 191)
5191	BS 5191 : 1975
5233	BS 5233 : 1986
5532	BS 5532 : Part 1 : 1978
45020	BS EN 45020 : 1993
EOQ	<i>Glossary of terms used in the management of quality</i>

Whenever possible in this standard, only one term is used for each definition. However, where there are synonymous terms, both terms are given. Alternative terms are given in medium type below the preferred terms with their status indicated, e.g. deprecated. These terms are not individually numbered, but are included in the index with a reference to the preferred term. Terms of more than one word e.g. 'approved concept', are written in a direct style, not as 'concept, approved'. The inverted term is included in the alphabetical index with a reference to the direct term.

Italicized words in the definitions indicate terms that are defined elsewhere in this standard.

NOTE. Where definitions use terms that are not themselves defined, reference should be made to the source document quoted. Terotechnology as such has not been dealt with internationally, thus many of the terms have had to be defined by the BSI Technical Committee responsible for this standard.

Section 1. Basic terotechnology terms

No.	Term	Source	Definition
1.1 Fundamental definition			
1101	terotechnology		<p>A combination of management, financial, engineering, building and other practices applied to physical <i>assets</i> in pursuit of economic <i>life cycle costs</i>.</p> <p>NOTE 1. Terotechnology is concerned with the <i>specification</i> and <i>design for reliability</i> and <i>maintainability</i> of physical <i>assets</i> such as plant, machinery, equipment, buildings and structures. The application of terotechnology also takes into account the processes of installation, <i>commissioning</i>, <i>operation</i>, <i>maintenance</i>, <i>modification</i> and replacement. Decisions are influenced by <i>feedback</i> of information on design, performance and <i>costs</i>, throughout the <i>life cycle</i> of a <i>project</i>.</p> <p>NOTE 2. Terotechnology applies equally to both <i>assets</i> and <i>products</i> because the <i>product</i> of one organization often becomes the <i>asset</i> of another. Even if the <i>product</i> is a simple consumer <i>item</i> its design and <i>customer</i> appeal will benefit from terotechnology and this will reflect in improved market security for the producer.</p>
1.2 Generic terms			
1201	approved concept		<i>A concept</i> accepted by the <i>user</i> , after <i>evaluation</i> , for implementation.
1202	asset		The buildings, plant, machinery and other permanent <i>items</i> required by the <i>user</i> to produce and supply the <i>product</i> .
			NOTE. <i>Terotechnology</i> clearly distinguishes this specialized meaning from its more general meaning.
1203	concept		A perceived possible <i>project</i> and the methods and <i>assets</i> required to achieve this.
			NOTE. The concept should include the identification of <i>assets</i> required to produce a required <i>output</i> and a forecast of the financial implications over the complete <i>project's life cycle</i> .
1204	customer		The intended recipient of the <i>product</i> .
1205	entity; item		Any element that can be considered individually.
1206	feed		The 'raw' material or goods from which the <i>user</i> produces the <i>product</i> within, or by the use of, an <i>asset</i> .
1207	life cycle		The time interval that commences with the initiation of the <i>concept</i> and terminates with the <i>disposal</i> of the <i>asset</i> .
1208	output		A quantitative and qualitative measure of the <i>product</i> produced.

No.	Term	Source	Definition
1209	product		The specific material <i>item(s)</i> or <i>service(s)</i> to be supplied.
1210	project		<p>The planning and implementation of an <i>approved concept</i> from initial acceptance, through the <i>life cycle</i> until the <i>asset</i> is disposed of.</p> <p>NOTE. In other contexts a project may last only until the delivery or <i>commissioning</i> of the <i>asset</i>.</p>
1211	service		<p>1) The supply to a <i>customer</i> of a <i>product</i> or utility that is not of a physical nature, this could include public, social and commercial assistance.</p> <p>NOTE 1. Examples of the diverse range of services include law enforcement, insurance, electricity supply, hairdressing, tax collection, welfare benefits and medical treatment.</p> <p>2) The results generated by activities at the interface between the <i>supplier</i> and the <i>customer</i>, and by <i>supplier</i> internal activities to meet the <i>customer</i> needs.</p> <p>NOTE 2. The <i>supplier</i> or the <i>customer</i> may be represented at the interface by personnel or equipment.</p> <p>NOTE 3. <i>Customer</i> activities at the interface with the <i>supplier</i> may be essential to the service delivery.</p> <p>NOTE 4. Delivery or use of tangible <i>products</i> may form part of the service delivery.</p> <p>NOTE 5. A <i>service</i> may be linked with the manufacture and supply of a tangible <i>product</i>.</p> <p>3) In the context of connections to plant or equipment or any other <i>asset</i>, the supplies of energy (e.g. electricity) or fluids (e.g. water, gases, compressed air) needed for the functioning of the plant, etc.</p> <p>NOTE 6. In this context the term is usually used in the plural as a collective term for these individual supplies.</p> <p>4) To carry out routine activities necessary to keep an <i>item</i> in operating condition.</p>
1212	supplier; vendor		<p>The provider of the <i>asset</i> to the <i>user</i>.</p> <p>NOTE 1. <i>Terotechnology</i> clearly distinguishes this specialized meaning from its more general meaning. The <i>supplier</i>, as used in the wider sense, may be defined as 'the organization that provides a <i>product</i> to the <i>customer</i>'.</p> <p>NOTE 2. In a contractual situation the <i>supplier</i> may be called the contractor.</p> <p>NOTE 3. The <i>supplier</i> may be, for example, the producer, distributor, importer, assembler, or <i>service</i> organization.</p> <p>NOTE 4. The <i>supplier</i> can be either external or internal.</p>
1213	user		<p>The individual who, or organization that, operates or uses the <i>product</i>.</p> <p>NOTE. <i>Terotechnology</i> clearly distinguishes this specialized meaning from its more general meaning.</p>

Section 2. Terms initially arising in the concept and acquisition phases

No.	Term	Source	Definition
2.1 Economic appraisal terms			
2101	acquisition costs	3811	The total <i>cost</i> of acquiring an <i>item</i> of material (the <i>asset</i>) and bringing it to the condition where it is capable of performing its intended function. NOTE. This includes the financial effects of activities involving the purchase of goods and <i>services</i> and/or providing necessary goods and <i>services</i> internally.
2102	assessment		The determination of values to be ascribed to <i>items</i> , activities or <i>elements of cost</i> .
2103	capital cost	4778/3.1	The total <i>cost</i> to the owner of acquiring an <i>item</i> and bringing it to the condition where it is capable of performing its intended function. NOTE 1. ¹⁾ Capital cost is usually restricted to those <i>costs</i> that are capitalized in the accounts. NOTE 2. ¹⁾ This term should not be confused with <i>cost of capital</i> , which is the <i>cost</i> of financing a proposed <i>project</i> .
2104	cost(s)	4778/2	The expenditure (actual or notional) incurred on, or attributable to, a given thing. NOTE. The basis of cost can be so variable that whenever possible it should be qualified as to its nature or limitations, for example historical, variable. Costs should also be related to a particular thing or 'object of thought', for example a given quantity or unit of goods made or <i>services</i> performed.
2105	cost benefit analysis CBA <i>abbreviation</i>		An <i>assessment</i> of the desirability of <i>projects</i> , where the indirect effects on third parties outside those affecting the decision making process, are taken into account.
2106	cost function	EOQ	An expression of the way <i>cost</i> varies with a given parameter.
2107	discounted cash flow DCF <i>abbreviation</i>	3138	The <i>concept</i> of relating cash inflows and outflows over the life of a <i>project</i> or <i>operation</i> to a common base value (for example present value), using discount rates based on compound interest.
2108	disposal costs	3811	The net total <i>costs</i> of disposing of an <i>item</i> of material when it has failed or is no longer required for any reason. NOTE. These <i>costs</i> may be either positive or negative.
2109	elements of cost	3811	All those <i>items</i> that are considered or arise individually and that are combined together to form the total <i>cost(s)</i> .

¹⁾ This note does not form part of the BS 4778 : Section 3.1 definition.

No.	Term	Source	Definition
2110	estimate	4778/3.2	<p>1) An <i>operation</i>, or the result of this <i>operation</i>, made for the purpose of assigning, from the observed values in a sample, numerical values to the parameters of the distribution chosen as the statistical <i>model</i> of the population from which this sample is taken.</p> <p>2) A representative value of a parameter for a particular purpose.</p> <p>NOTE. This value need not be derived by valid statistical analysis but may be one that is suitable for the argument being put forward.</p>
2111	investment appraisal		An <i>assessment</i> of expenditure and income for a <i>project</i> , to determine its financial desirability.
2112	life cycle costing	3811	The technique of considering <i>life cycle costs</i> .
2113	life cycle cost	4778/3.1	<p>The total <i>cost</i> of ownership of an <i>item</i> taking into account all the <i>costs</i> of acquisition, personnel training, <i>operation</i>, <i>maintenance</i>, <i>modification</i> and <i>disposal</i>.</p> <p>NOTE. Consideration of life cycle costs may be important in making decisions on new or changed requirements and as a control mechanism in <i>service</i>, for existing and future <i>items</i>.</p>
2114	life cycle cost model	3811	A mathematical <i>model</i> designed to estimate the <i>life cycle cost</i> of an <i>asset</i> .
2115	life cycle cost trade-off	3811	The pursuit of a reduced, or at best minimized, <i>life cycle cost</i> by selection of appropriate design, <i>operation</i> and support characteristics.
2116	maintenance cost	4778/3.1	The total <i>cost</i> of retaining an <i>item</i> in, or restoring it to, a state in which it can perform its required function.
2117	model	3138	<p>1) A simplification of a reality or a representation of a situation using graphical, verbal or mathematical symbols, electronic or physical means by which the situation can be examined, manipulated and evaluated.</p> <p>2) A representation in some way of the physical or economic set of circumstances.</p>
2118	net present value NPV <i>abbreviation</i>		<p>The aggregate of future income and expenditure discounted back to a common base date, usually the present, at a given compound interest rate.</p> <p>NOTE. Choice and <i>evaluation</i> of competing solutions should take account of net present value and changing price levels where this can be done.</p>
2119	optimization	3811	Finding the best procedure, policy or <i>maintenance</i> interval with respect to specified criteria.

No.	Term	Source	Definition
2120	optimized life cycle costs		The least <i>costs</i> that provide the maximum benefit from an <i>asset</i> over the <i>life cycle</i> period.
2121	regression analysis	3138	A method of calculating a possible relationship between one set of values and another set of values on which the first set is believed to depend.
2122	running costs; operating costs costs in use <i>depreciated</i>	3811	The total <i>costs</i> to the owner or <i>user</i> of the <i>operation, maintenance</i> and revenue funded <i>modification</i> of an <i>item, system</i> or <i>asset</i> . NOTE. The term 'costs in use' is normally applied to buildings.
2123	sensitivity analysis		An <i>examination</i> of the effects of selected values of varying parameters within a system.

2.2 Management accounting terms

NOTE. The following terms are also applicable.

- 2104 cost
- 2106 cost function
- 2109 elements of cost
- 2110 estimate
- 2122 running costs

2201	appraisal costs	4778/2	The <i>cost</i> of assessing the quality achieved. NOTE. Appraisal costs can include the <i>cost</i> of inspecting, testing, etc. carried out during, and on completion of, manufacture.
2202	budget centre		A section of an organization for which control may be exercised through budgets.
2203	budgetary control		The establishment of financial accountability, relating the responsibilities of executives to the requirements of a policy; and the continuous comparison of actual financial expenditure with that planned, either to secure by individual <i>action</i> the objective of that policy or provide a basis for its revision.
2204	cost centre	5191	A location, person or <i>item</i> of equipment (or group of these) in respect of which <i>costs</i> may be ascertained and related to <i>cost</i> units, e.g. process cost centre, production cost centre, service cost centre.
2205	cost control	3811	The regulation by management <i>action</i> of the <i>costs</i> of operating an undertaking, particularly where such <i>action</i> is guided by <i>cost</i> accounting.

No.	Term	Source	Definition
2206	cost of scrap	3138	The net <i>costs</i> associated with the production and <i>disposal</i> of rejected <i>output</i> . NOTE. Net <i>costs</i> may include labour, material and processing <i>costs</i> less any income from the sale of <i>scrap</i> .
2207	costing methods	3811	All those methods and techniques used in <i>cost control</i> .
2208	economic quality level	4778/2	The economic level of quality at which the <i>cost</i> of securing higher quality would exceed the benefits of the improved quality.
2209	external failure cost	4778/2	The <i>cost</i> arising outside an organization due to the failure to achieve the quality specified. NOTE. The term can include the <i>costs</i> of claims against warranty, replacement and consequential losses of custom and goodwill.
2210	internal failure cost	4778/2	The <i>cost</i> arising within an organization due to the failure to achieve the quality specified. NOTE. The term can include the <i>cost of scrap</i> , rework and re- <i>inspection</i> and also consequential losses within the organization.
2211	prevention cost	4778/2	The <i>cost</i> of any <i>action</i> taken to prevent or reduce <i>faults</i> and <i>failures</i> . NOTE. Prevention costs can include the <i>cost</i> of planning, setting up and maintaining the <i>quality control</i> system.
2212	profit centre		A part of a business responsible for <i>costs</i> and revenues.
2213	quality related cost	4778/2	The expenditure incurred in <i>defect</i> prevention and appraisal activities plus the losses due to internal and external <i>failure</i> .
2214	value of stock	5191	The amount of <i>stock</i> measured in monetary units.

2.3 Quality control terms

NOTE. The following terms are also applicable.

- 2201 appraisal costs
- 2208 economic quality level
- 2209 external failure cost
- 2210 internal failure cost
- 2211 prevention cost
- 2213 quality related cost

2301	acceptable condition	3811	The condition of an item agreed for each particular usage. NOTE. Attention is drawn to the fact that statutory requirements may exist governing minimum acceptable conditions.
------	-----------------------------	------	---

No.	Term	Source	Definition
2302	blemish	EOQ	<p>An <i>imperfection</i>, that occurs with a severity sufficient to cause awareness, but that should not cause any real impairment with respect to intended normal, or reasonably foreseeable, usage requirements.</p> <p>NOTE. The term blemish is appropriate for use when a quality characteristic of a <i>product</i> or <i>service</i> is evaluated in terms of <i>customer</i> awareness (as contrasted to simply <i>conformity to specifications</i>). There may be synonyms for blemish more appropriate to particular <i>products</i> or <i>services</i>.</p>
2303	blemished unit	EOQ	<p>A unit of <i>product</i> or <i>service</i> containing at least one <i>blemish</i>.</p>
2304	calibration		<p>All the <i>operations</i> for the purpose of determining the values of the errors of a measuring instrument (and, if necessary, to determine other metrological properties).</p> <p>NOTE 1. The metrological usage of the term calibration is often extended to include <i>operations</i> such as adjustment, gauging, scale graduation, etc.</p>
2305	certification		<p>A procedure by which a third party gives written assurance that a <i>product</i>, process or <i>service</i> conforms to specified requirements.</p> <p>NOTE 1. The term certification should not be used in the context of second or first parties, see 2314.</p> <p>NOTE 2. Certification is an area where <i>quality assurance</i> impinges on regulations, approvals and requirements for manufacturers to satisfy legal obligations. It is a means by which a producer can demonstrate <i>compliance</i> with these constraints.</p>
2306	compliance	EOQ	<p>An affirmative indication or judgement that the <i>supplier</i> of a <i>product</i> or <i>service</i> has met the requirements of the relevant <i>specifications</i>, contract or regulation; also the state of meeting the requirements.</p> <p>NOTE. The expressions 'complies with' and 'conforms to' are not quite synonymous. For clarity and consistency of usage, conformity should be treated as the attribute of a product, material processes, services or system resulting from compliance by a person or body with a specification, contract or regulation.</p>
2307	conformity		<p>An affirmative indication or judgement that a <i>product</i> or <i>service</i> has met the requirements of the relevant <i>specifications</i>, contract or regulation; also the state of meeting the requirements.</p> <p>NOTE. In <i>quality control</i> usage, conformity customarily refers to an <i>assessment</i> not dependent on the passage of time in <i>product</i> use, as contrasted to <i>reliability</i> that has a time connotation. See also the note to 2306.</p>

No.	Term	Source	Definition
2308	defect	4778/1	<p>The non-fulfilment of an intended requirement or an expectation for an <i>entity</i>, including one concerned with <i>safety</i>.</p> <p>NOTE 1. The requirement or expectation should be reasonable under the existing circumstances.</p> <p>NOTE 2. This term has been defined in recent legislation where its application is restricted to those <i>faults</i> that may cause the <i>risk</i> of harm or death to persons. In order to avoid the chance of the term being misunderstood or misinterpreted it is strongly recommended that the term 'defect' should not be used except where this legal interpretation is unarguably applicable. See also 3.1 in BS 4778 : Section 3.1 : 1991 and the foreword of this standard. Alternative terms that accurately represent the state or event should be used, e.g. <i>blemish</i>, <i>imperfection</i>, <i>nonconformity</i> or <i>failure</i>. Notes 3 and 4 are taken from the source document on which the above definition is based.</p> <p>NOTE 3. The definition covers the departure or absence of one or more quality characteristics from intended usage requirements.</p> <p>NOTE 4. The basic difference between <i>nonconformity</i> and defect is that specified requirements may differ from the requirements for the intended use.</p>
2309	imperfection	EOQ	<p>A departure of a quality characteristic from its intended level or state without any association with <i>conformity to specification</i> requirements or to the usability of a <i>product</i> or <i>service</i>.</p> <p>NOTE 1. Usually imperfections are rated on a severity scale or measured as deviations and, unless of high severity or magnitude, are to be reasonably expected in a <i>product</i> or <i>service</i> of acceptable quality.</p> <p>NOTE 2. An alternative term for imperfection is quality characteristic departure.</p> <p>NOTE 3. For quality characteristics, where there is no designated intended level, so that a departure is not definable, observed measurements serve the same role as imperfection in providing information. In some cases where the differences become part of the <i>product</i> description, it may be more appropriate to use a term such as variant.</p> <p>NOTE 4. The term imperfection is a general <i>classification</i>. Each imperfection type is usually identified by its specific name (e.g. scratch, weight, missing part). The severity or magnitude indicator may be a measurement deviation, a 'guide' identification or some other appropriate scale rating. Some imperfections may involve a large number of severity or magnitude <i>classifications</i> while others, such as a missing part, may involve only one.</p> <p>NOTE 5. The very existence of a specified tolerance is recognition that achieving 'perfection' for every quality characteristic is essentially impractical on an economic basis and, under usual circumstances, impossible in a physical sense. In many situations 'perfection' cannot be defined other than as some desired aim.</p>

No.	Term	Source	Definition
2310	nonconformity	4778/1	<p>The non-fulfilment of a specified requirement.</p> <p>NOTE 1. The definition covers the departure or absence of one or more quality characteristics, including <i>dependability</i> characteristics, or quality system elements, from specified requirements.</p> <p>NOTE 2. The basic difference between nonconformity and <i>defect</i> is that specified requirements may differ from the requirements for the intended use.</p> <p>NOTE 3. See also 2308.</p>
2311	quality assurance	4778/2	<p>All those planned and systematic <i>actions</i> necessary to provide adequate confidence that a <i>product</i> or <i>service</i> will satisfy given requirements for quality.</p> <p>NOTE 1. Unless given requirements fully reflect the needs of the <i>user</i>, quality assurance is not complete.</p> <p>NOTE 2. For effectiveness, quality assurance usually requires a continuing <i>evaluation</i> of factors that affect the adequacy of the design or <i>specification</i> for intended applications as well as verifications and <i>audits</i> of production, installation and <i>inspection operations</i>. Providing confidence may involve producing evidence.</p> <p>NOTE 3. Within an organization, quality assurance serves as a management tool. In contractual situations, quality assurance also serves to provide confidence in the <i>supplier</i>.</p>
2312	quality control	4778/1	<p>The techniques and activities that are used to fulfil requirements for quality.</p> <p>NOTE 1. In order to avoid confusion, care should be taken to include a modifying term when referring to a subset of quality control, such as manufacturing quality control, or when referring to a broader <i>concept</i>, such as company-wide quality control.</p> <p>NOTE 2. Quality control involves operational techniques and activities aimed both at <i>monitoring</i> a process and at eliminating causes of unsatisfactory performance at relevant stages of the quality loop (quality spiral) in order to result in economic effectiveness.</p>
2313	specification	4778/1	<p>The document that prescribes the requirements to which the <i>product</i> or <i>service</i> has to conform.</p> <p>NOTE. A specification should refer to, or include drawings, patterns or other relevant documents and should also indicate the means and the criteria whereby conformity can be checked.</p>
2314	supplier's declaration		<p>A procedure by which a <i>supplier</i> gives written assurance that a <i>product</i>, process or <i>service</i> conforms to specified requirements.</p> <p>NOTE. In order to avoid any confusion, the expression self-certification should not be used.</p>
2315	test	45020	<p>Technical <i>operation</i> that consists of the determination of one or more characteristics of a given <i>product</i>, process or <i>service</i> according to a specified procedure.</p>

No.	Term	Source	Definition
2.4 Supply and erection/installation terms			
NOTE. The following terms are also applicable.			
1211 service			
2313 specification			
2401	commissioning		Advancement of an installation from the stage of static completion to full working order and achievement of the specified operational requirements.
2402	installation instructions	3811	The document that describes in detail the procedure for installing the <i>product</i> including, if necessary, the procedure for unpacking and preparation prior to installation. NOTE. This document forms part of the <i>technical manual</i> .
2403	network analysis; network techniques	4335	A group of techniques, for the description, analysis, planning and control of activities, that considers the logical interrelationships of all activities. NOTE 1. The group includes techniques concerned with time, resources, <i>costs</i> and other influencing factors, e.g. uncertainty. NOTE 2. The terms programme evaluation and review technique (PERT), critical path analysis (CPA), critical path method (CPM) and precedence method refer to particular techniques and should not be used as synonyms for network analysis.
2404	on stream		The state of the <i>asset</i> in which it is performing its intended function. NOTE. The term originates from, and is particularly applied in, processes.
2405	procurement		The process of obtaining goods, materials and <i>services</i> from an internal or external <i>supplier</i> . This process includes the managerial, technical, contractual and physical <i>actions</i> required to control the <i>availability</i> and ordering of such requirements.
2406	tender		An offer, normally in writing, to supply a commodity or to execute works, giving price and <i>compliance</i> with a <i>specification</i> .
2407	vendor assessment		The <i>assessment</i> by or for a <i>customer</i> of potential <i>suppliers</i> with regard to their technical ability and financial ability/stability, and in other respects, to determine their suitability as <i>suppliers</i> .

No.	Term	Source	Definition
2.5 Environmental implication terms			
2501	aesthetics		Set of principles of good taste and appreciation of beauty.
2502	degradable		Capable of degrading to a condition similar to that of naturally occurring substances.
2503	effluent		A stream of fluid being released or discharged to the environment.
2504	fully treated		Of <i>effluent</i> or <i>waste</i> . <i>Treated</i> chemically or by other processes to a state where it has no significant adverse effect on the environment.
2505	fume		An odorous or <i>noxious</i> smoke, vapour, gas or aerosol emitted to the atmosphere.
2506	noxious		Harmful or unwholesome.
2507	poisonous substance; toxic substance		A substance that, when introduced into or absorbed by a living organism (usually a human being), destroys life or injures health.
2508	solvent		A liquid capable of dissolving specific materials.
2509	threshold limit		A limiting concentration of a substance or intensity of a radiation in an environment beyond which adverse effects may be expected. NOTE. This term specially applies to limits set by statutory bodies to ensure that the adverse effects are prevented.
2510	treated		Of matter or <i>effluent</i> being disposed of. Subjected to chemical or other <i>treatment</i> to render it less harmful.
2511	treatment		The <i>action</i> of reprocessing a material or <i>effluent</i> to render it less harmful or more suitable for its intended purpose.
2512	visual impact		The qualitative emotional reaction to something that is, or could be, seen.
2513	waste disposal		The activity of disposing of material no longer required.
2514	waste storage		The storage of material no longer required, prior to <i>disposal</i> .

No.	Term	Source	Definition
2.6 Terms used in the design of a product or asset			
NOTE. The following term is also applicable. 2501 aesthetics			
2601	active redundancy	4778/3.2	That <i>redundancy</i> wherein all means for performing a required function are intended to operate simultaneously.
2602	criticality analysis		A quantitative analysis of events or <i>faults</i> and the ranking of these in order of the seriousness of their consequences.
2603	design audit		A formal and systematic analysis of a proposed design for, or on behalf of, the <i>user</i> or <i>user</i> organization to ascertain that the <i>user's</i> requirements are, or will be, met.
2604	design review		A documented, comprehensive and systematic critique of a design, for or on behalf of the <i>supplier</i> , to: <ul style="list-style-type: none"> a) evaluate the design, its requirements and its implementation; b) identify problems, if any and to propose solutions. <p>NOTE. The design requirements include all those that concern an <i>entity</i> at all stages of the quality loop and at all phases of its <i>life cycle</i>.</p>
2605	ergonomics	3138	The study of the relationship between workers and their occupation, equipment and environment and particularly the application of anatomical, physiological and psychological knowledge to the problems arising therefrom.
2606	fail-safe	4778/3.2	A design property of an <i>item</i> which prevents its <i>failures</i> from resulting in critical <i>faults</i> .
2607	fault modes and effects analysis FMEA <i>abbreviation</i> failure modes and effects analysis <i>deprecated</i>	4778/3.2	A qualitative method of <i>reliability</i> analysis which involves the study of the <i>fault</i> modes which can exist in every subitem of the <i>item</i> and the determination of the effects of each <i>fault</i> mode on other subitems of the <i>item</i> and on the required functions of the <i>item</i> .
2608	fault modes, effects and criticality analysis FMECA <i>abbreviation</i> failure modes, effects and criticality analysis <i>deprecated</i>	4778/3.2	A qualitative method of <i>reliability</i> analysis which involves a <i>fault modes and effects analysis</i> together with a consideration of the probability of <i>failure</i> modes, their occurrence and of the ranking of effects and the seriousness of the <i>faults</i> .

No.	Term	Source	Definition
2609	market research		The process of making investigations into the characteristics of given markets, for example, location, size, growth potential and observed attitudes.
2610	marketing		The management process responsible for identifying, anticipating and satisfying the <i>customers'</i> perceived and latent requirements profitably.
2611	product liability		The liability of a <i>supplier</i> in statute or common law for his <i>product</i> .
2612	redundancy	4778/3.2	In an <i>item</i> . The existence of more than one means for performing a required function.
2613	standby redundancy	4778/3.2	That <i>redundancy</i> wherein a part of the means for performing a required function is intended to operate, while the remaining part(s) of the means are inoperative until needed.
2614	statutory liability		The liability of the <i>supplier</i> for his <i>products</i> to conform to the requirements of the law.

Section 3. Operational terms related to the period-of-use phase

No.	Term	Source	Definition
NOTE. The following term is also applicable. 2503 effluent			
3.1 Operation terms			
3101	accumulated down time	4778/3.2	The accumulated time during which an <i>item</i> is in a <i>down state</i> over a given time interval.
3102	action		Performing one or more activities, <i>steps</i> or <i>tasks</i> to achieve an objective.
3103	available state	4778/3.1	The state of an <i>item</i> when it is capable of performing its required functions in the defined condition of use.
3104	busy state	4778/3.2	The state of an <i>item</i> in which it performs a required function for a <i>user</i> and for that reason is not accessible by other <i>users</i> .
3105	critical state	4778/3.2	A state of an <i>item</i> assessed as likely to result in injury to persons, significant material damage or other unacceptable consequences. NOTE. A critical state may be the result of a critical <i>fault</i> , but not necessarily.
3106	disabled state; outage	4778/3.2	A state of an <i>item</i> characterized by its inability to perform a required function for any reason.
3107	disabled time	4778/3.2	The time interval during which an <i>item</i> is in a <i>disabled state</i> .
3108	down state; internal disabled state	4778/3.2	A state of an <i>item</i> characterized either by a <i>fault</i> , or by a possible inability to perform a required function during <i>preventive maintenance</i> .
3109	down time	4778/3.2	The time interval during which an <i>item</i> is in a <i>down state</i> .
3110	drill	4884/1	A mandatory procedure.
3111	external disabled state	4778/3.2	That subset of the <i>disabled state</i> when the <i>item</i> is in an <i>up state</i> , but lacks required external resources or is disabled due to other planned <i>actions</i> than <i>maintenance</i> .
3112	external disabled time; external loss time	4778/3.2	The time interval during which an <i>item</i> is in an <i>external disabled state</i> .

No.	Term	Source	Definition
3113	forced outage	3811	<i>Outage</i> due to the unscheduled putting out of <i>service</i> of an <i>item</i> . NOTE. This term is used in the electricity supply industry.
3114	idle state; free state	4778/3.2	A non-operating <i>up state</i> during <i>non-required time</i> .
3115	idle time; free time	4778/3.2	The time interval during which an <i>item</i> is in a <i>free state</i> .
3116	monitoring; supervision	4778/3.2	Activity, performed either manually or automatically, intended to observe the state of an <i>item</i> .
3117	non-operating state	4778/3.2	The state when an <i>item</i> is not performing a required function.
3118	non-operating time	4778/3.2	The time interval during which an <i>item</i> is in a <i>non-operating state</i> .
3119	non-required time	4778/3.2	The time interval during which the <i>user</i> does not require the <i>item</i> to be in a condition to perform a required function.
3120	operating instructions	3811	The document that describes in detail the methods of starting up, shutting down, controlling and <i>monitoring</i> the <i>asset</i> under all foreseeable conditions. NOTE. The document forms part of the <i>technical manual</i> .
3121	operating procedure		The sequence of <i>actions</i> to be performed on or by an <i>asset</i> to achieve a required function.
3122	operating state	4778/3.2	The state when an <i>item</i> is performing a required function.
3123	operating time	4778/3.2	The time interval during which an <i>item</i> is in an <i>operating state</i> .
3124	operation	4778/3.2	The combination of all technical and administrative <i>actions</i> intended to enable an <i>item</i> to perform a required function, recognizing necessary adaptation to changes in external conditions. NOTE. By external conditions are understood, for example, <i>service demand</i> and environmental conditions.
3125	outage rate	3811	For a particular class of <i>outage</i> and a specified period of time. The quotient of the number of <i>outages</i> to the <i>up time</i> for an <i>item</i> , for example <i>scheduled outage rate</i> , <i>forced outage rate</i> . NOTE. This term is used in the electricity supply industry.

No.	Term	Source	Definition
3126	required time	4778/3.2	The time interval during which the <i>user</i> requires the <i>item</i> to be in a condition to perform a required function.
3127	scheduled outage planned outage <i>deprecated</i>	3811	<i>Outage</i> due to the programmed taking out of <i>service</i> of an <i>item</i> . NOTE. The term scheduled outage is used in the electricity supply industry.
3128	scheduled outage duration	3811	Within a specified period of time, the period of time during which an <i>item</i> is not available to perform its function because it is withdrawn from <i>service</i> according to programme. NOTE. This term is used in the electricity supply industry.
3129	standby state	4778/3.2	A non-operating <i>up state</i> during the <i>required time</i> .
3130	standby time	4778/3.2	The time interval during which an <i>item</i> is in a <i>standby state</i> .
3131	step		A single identifiable <i>action</i> carried out as one element in a procedure or series of <i>actions</i> .
3132	technical manual	3811	A document that communicates appropriately and effectively specific direction, <i>data</i> and information about the <i>product</i> to cover the subjects of: <ul style="list-style-type: none"> a) purpose and planning (what the <i>product</i> is for); b) <i>operating instructions</i> (how to use the <i>product</i>); c) technical description (how the <i>product</i> works); d) handling, installation, storage, transit (how to prepare the <i>product</i> for use); e) <i>maintenance instructions</i> (how to keep the <i>product</i> working); f) <i>maintenance schedules</i> (what is done and when); g) <i>parts lists</i> (what the <i>product</i> consists of); h) <i>modification instructions</i> (how to change the <i>product</i>); i) <i>disposal instructions</i> (how to dispose of the <i>product</i>). NOTE 1. Technical manuals are provided for those involved with managing, operating, maintaining and provisioning for the complete <i>asset</i> . NOTE 2. See also BS 4884.

No.	Term	Source	Definition
3133	up state	4778/3.2	A state of an <i>item</i> characterized by the fact that it can perform a required function, assuming that the external resources, if required, are provided. NOTE. This state relates to <i>availability performance</i> .
3134	up time	4778/3.2	The time interval during which an <i>item</i> is in an <i>up state</i> .
3135	waiting time	3138	That part of attendance time other than unoccupied time during which a worker is available but is prevented from working.
3136	waste		By-products of manufacture or of a process. NOTE. Some waste <i>products</i> may be of further use after reprocessing, or may have a <i>disposal</i> value. Other waste may be useless or require special handling and <i>disposal</i> methods that will incur additional <i>costs</i> .
3.2 Performance terms			
NOTE. The following term is also applicable. 3135 waiting time			
3201	availability (performance)	4778/3.2	The ability of an <i>item</i> to be in a state to perform a required function under given conditions at a given instant of time or over a given time interval, assuming that the required external resources are provided. NOTE 1. This ability depends on the combined aspects of the <i>reliability performance</i> , the <i>maintainability performance</i> and the <i>maintenance support performance</i> . NOTE 2. Required external resources, other than <i>maintenance</i> resources, do not affect the availability performance of the <i>item</i> .
3202	bad-as-old b.a.o. abbreviation		Repaired in such a way that the <i>asset</i> is partially restored to its original condition while retaining some used or worn parts. NOTE 1. <i>Good-as-new</i> and bad-as-old are alternative <i>repair</i> options usually assumed in <i>models</i> , but in practice <i>maintenance</i> restores <i>items</i> to a condition that is neither <i>good-as-new</i> (<i>g. a. n.</i>) nor b. a. o. NOTE 2. <i>GAN</i> implies that <i>preventive maintenance</i> is as good as a renewal and the <i>item</i> clock is zeroed thereby. Under b.a.o. the <i>item</i> is restored as if the <i>failure</i> had not happened so that its propensity for future <i>failure</i> is the same as an <i>item</i> of the same age from new which has not failed.
3203	breakdown	3811	<i>Failure</i> resulting in the non-availability of an <i>item</i> . NOTE. See also 3201.

No.	Term	Source	Definition
3204	capability		<p>The ability of an <i>item</i> to meet a <i>service</i> demand of given quantitative characteristics under given conditions.</p> <p>NOTE 1. This may be any combination of faulty and correctly functioning subitems.</p> <p>NOTE 2. For telecommunication <i>services</i> this ability is called trafficability performance.</p>
3205	dependability	4778/3.2	<p>The collective term used to describe the <i>availability performance</i> and its influencing factors: <i>reliability performance</i>, <i>maintainability performance</i> and <i>maintenance support performance</i>.</p> <p>NOTE. Dependability is used only for general descriptions in non-quantitative terms.</p>
3206	durability	4778/3.2	<p>The ability of an <i>item</i> to perform a required function under given conditions of use and <i>maintenance</i>, until a limiting state is reached.</p> <p>NOTE. A limiting state of an <i>item</i> may be characterized by the end of the useful life, unsuitability for any economic or technological reasons or other relevant factors.</p>
3207	efficiency		<p>1) The ratio of useful work performed to the total energy expended.</p> <p>2) A term expressed qualitatively to reflect the relationship between the <i>output</i> from, and the input to, an <i>item</i> or an activity.</p>
3208	good-as-new g.a.n. abbreviation		<p>Repaired in such a way that the <i>asset</i> is fully restored to its original condition.</p> <p>NOTE. See notes to 3202.</p>
3209	history record	4778/3.1	<p>A <i>record</i> of the history of the <i>operation</i> of an <i>item</i> for use in the analysis and design of that <i>item</i>.</p> <p>NOTE. In design, the history record is used prior to testing and production to produce <i>failure</i> rates and to identify weaknesses or <i>risk</i> areas.</p>
3210	load factor		<p>The quotient of the <i>mean</i> actual load of a production resource (or group of production resources) or of a department (for example store or warehouse) and the available <i>mean</i> capacity during a particular period, which indicates the extent to which the capacity is used during a particular period.</p> <p>NOTE. In certain industries load factor is synonymous with <i>utilization</i>.</p>

No.	Term	Source	Definition
3211	operational research	3138	The application of the methods of science to complex problems arising in the direction and management of large systems of people, machines, materials and money in industry, business, government and defence. NOTE. The distinctive approach is to develop a <i>model</i> of the system, incorporating measures of factors such as chance and <i>risk</i> , with which to predict and compare the outcomes of alternative decisions, strategies or controls. The purpose is to help management determine its policy and <i>action</i> scientifically.
3212	utilization		The actual usage of a resource compared with the maximum possible whilst it is available for use during a given period.
3.3 Reliability terms			
NOTE. The following terms are also applicable. 2302 blemish 2308 defect			
3301	ageing failure; wearout failure	4778/3.2	A <i>failure</i> whose probability of occurrence increases with the passage of time, as a result of processes inherent in the <i>item</i> .
3302	critical failure	4778/3.2	A <i>failure</i> which is assessed as likely to result in injury to persons, significant material damage or other unacceptable consequences.
3303	design failure	4778/3.2	A <i>failure</i> due to inadequate design of an <i>item</i> .
3304	design for reliability	3811	The process of <i>task</i> recognition and problem solving to enable an <i>item</i> to perform a required function under stated conditions for a stated period of time.
3305	failure	4778/3.2	The termination of the ability of an <i>item</i> to perform a required function. NOTE 1. After failure the <i>item</i> has a <i>fault</i> . NOTE 2. Failure is an event, as distinguished from <i>fault</i> , which is a state. NOTE 3. This <i>concept</i> as defined does not apply to <i>items</i> consisting of <i>software</i> only.
3306	failure classification	3811	The allocation of a <i>failure</i> to one of the <i>failure</i> types given in section 04 of BS 4778 : Section 3.2 : 1991.
3307	failure mechanism	4778/3.2	The physical, chemical or other process which has led to a <i>failure</i> .
3308	failure report	3811	A document reporting departure of an <i>item</i> from an <i>acceptable condition</i> .

No.	Term	Source	Definition
3309	fault	4778/3.2	<p>The state of an <i>item</i> characterized by the inability to perform a required function, excluding the inability during <i>preventive maintenance</i> or other planned <i>actions</i>, or due to lack of external resources.</p> <p>NOTE. A fault is often the result of a <i>failure</i> of the <i>item</i> itself, but may exist without prior <i>failure</i>.</p>
3310	fault report; incident report		A document reporting the detection of a <i>fault</i> or the occurrence of an incident, giving details of its nature, symptoms and consequences as far as is known.
3311	manufacturing failure	4778/3.2	A <i>failure</i> due to <i>nonconformity</i> during manufacture, to the design of an <i>item</i> or to specified manufacturing processes.
3312	mishandling failure	4778/3.2	A <i>failure</i> caused by incorrect handling or lack of care of the <i>item</i> .
3313	misuse failure	4778/3.2	A <i>failure</i> due to the application of stresses during use which exceed the stated capabilities of the <i>item</i> .
3314	primary failure	4778/3.2	A <i>failure</i> of an <i>item</i> not caused either directly or indirectly by a <i>failure</i> or a <i>fault</i> of another <i>item</i> .
3315	reliability (performance)	4778/3.2	<p>The ability of an <i>item</i> to perform a required function under given conditions for a given time interval.</p> <p>NOTE 1. It is generally assumed that the <i>item</i> is in a state to perform this required function at the beginning of the time interval.</p> <p>NOTE 2. The term reliability is also used as a measure of reliability performance.</p>
3316	reliability characteristics	3811	<p>Quantities used to express <i>reliability</i> in numerical terms.</p> <p>NOTE. The characteristics of <i>reliability</i> are discussed in clause 14 of BS 4778 : Section 3.1 : 1991.</p>
3317	reliability data	3811	<p><i>Data</i> on characteristics permitting quantitative evaluation of <i>reliability</i>.</p> <p>NOTE. Reliability data are discussed in clause 18 of BS 4778 : Section 3.1 : 1991.</p>
3318	reliability test	3811	A critical trial or <i>examination</i> of an <i>item</i> to determine if it will perform a required function under stated conditions for a stated period of time.
3319	weakness failure	4778/3.2	<p>A <i>failure</i> due to a weakness in the <i>item</i> itself when subjected to stresses within the stated capabilities of the <i>item</i>.</p> <p>NOTE. A weakness may be either inherent or induced.</p>

No.	Term	Source	Definition
3.4 Safety terms			
NOTE. The following term is also applicable. 2308 defect			
3401	caution		A statement of the need to take care lest serious consequences result in harm to material <i>items</i> such as the <i>asset</i> or the <i>product</i> .
3402	hazard	4778/3.1	A situation that could occur during the lifetime of a <i>product</i> , system or plant that has the potential for human injury, damage to property, damage to the environment, or economic loss.
3403	hazard analysis	4778/3.1	The identification of <i>hazards</i> and the consequences of the credible accident sequences of each <i>hazard</i> .
3404	major hazard	4778/3.1	A large scale <i>hazard</i> which may have severe consequences.
3405	permit to work	3811	A signed document, authorizing access to an <i>item</i> , that defines conditions, including <i>safety</i> precautions, under which work may be carried out. This may include a document, signed on completion of <i>maintenance</i> , stating that an <i>item</i> is safe and ready for use.
3406	potability		The quality of a liquid (usually water) of being capable of being drunk without adverse effects on health.
3407	risk	4778/3.1	A combination of the probability, or frequency, of occurrence of a defined <i>hazard</i> and the magnitude of the consequences of the occurrence.
3408	risk analysis; risk assessment	4778/3.1	The integrated analysis of the <i>risks</i> inherent in a <i>product</i> , system or plant and their significance in an appropriate context.
3409	safety	4778/3.1	The freedom from unacceptable <i>risks</i> of personal harm. NOTE. Safety is defined in the context of <i>risk</i> of personal harm. It is traceable quantitatively in decision-making on acceptable <i>risks</i> .
3410	safety audit		Formal review of the <i>risks</i> of personal harm.
3411	safety code		Prescribed requirements or procedures aimed at avoiding <i>risks</i> of personal harm.
3412	safety rule		A regulation designed to enforce a <i>safety code</i> .

No.	Term	Source	Definition
3413	warning		A statement advising of the need to take care lest there be serious consequences resulting in death of personnel or in a <i>hazard</i> to health.
3.5 Energy management terms			
3501	degree day	3811	The daily difference in degrees Celsius (or degrees Fahrenheit) between a base temperature of 15.5 °C (or 60 °F) and the 24 h <i>mean</i> outside temperature (when it falls below the base temperature). NOTE. Degree day figures provide a climatic correction for calculations of <i>efficiency</i> and enable an allowance for weather variation to be made when comparing the <i>efficiency</i> of a plant for one heating season with the <i>efficiency</i> of the same plant during a previous period.
3502	energy audit	3811	The determination of actual energy used in each part of an installation or process.
3503	energy budget	3811	The energy allowance for building or process purposes.
3504	energy management	3811	The management of the storage, conversion, distribution and <i>utilization</i> of energy directed to the economic provision of required <i>services</i> and the elimination of avoidable losses.
3505	energy requirement	3811	The summation of the amounts of energy used in a building or process.
3506	energy target	3811	The desired energy demand of a building or process.
3507	heat gain	3811	The flow of heat into an enclosure from all sources other than by space heating means.
3508	heat loss	3811	The rate of heat flow from a space.
3509	heat reclaim	3811	The principle whereby heat that might otherwise be discharged to <i>waste</i> is passed through a suitable form of heat exchanger and thereby recovered for other uses.
3510	heat recovery	3811	A process that enables <i>waste</i> heat to be stored or transferred for the purpose of performing a useful function elsewhere.

Section 4. Maintenance terms related to the period-of-use phase

No.	Term	Source	Definition
NOTE. The following terms are also applicable.			
	2315 test		
	2403 network analysis		
	3310 fault report; incidence report		
	3405 permit to work		
4.1 Maintenance execution terms			
4101	active maintenance time	4778/3.2	That part of the <i>maintenance time</i> during which a <i>maintenance action</i> is performed on an <i>item</i> , either automatically or manually, excluding <i>logistic delays</i> . NOTE. A <i>maintenance action</i> may be carried out while the <i>item</i> is performing a required function.
4102	administrative delay	4778/3.2	For <i>corrective maintenance</i> . The accumulated time during which an <i>action of corrective maintenance</i> on a faulty <i>item</i> is not performed due to administrative reasons.
4103	check-out time	4778/3.2	That part of <i>active corrective maintenance time</i> during which <i>function check-out</i> is performed.
4104	clean	3811	To reduce contamination to an acceptable level.
4105	condition monitoring	3811	The continuous or periodic measurement and interpretation of <i>data</i> to indicate the condition of an <i>item</i> to determine the need for <i>maintenance</i> . NOTE. Condition monitoring is normally carried out with the <i>item</i> in operation, in an operable state or removed but not subject to major dismantling.
4106	diagnosis	3811	The art or act of deciding from symptoms the nature of a <i>fault</i> .
4107	diagnostic	3811	Of or assisting <i>diagnosis</i> .
4108	examination	3811	A comprehensive <i>inspection</i> supplemented by measurement and physical testing in order to determine the condition of an <i>item</i> .
4109	feedback	3811	A written or oral report of the success or failure of an <i>action</i> to achieve its desired result that can be used to influence design, performance and <i>costs</i> .

No.	Term	Source	Definition
4110	inspection		<p><i>Examination of a product design, product, service or plant and determination of their conformity with specific requirements, or (on the basis of professional judgement) general requirements.</i></p> <p>NOTE 1. Inspection of a process includes personnel, facilities, technology and methodology.</p> <p>NOTE 2. The results of inspection may be used to support <i>certification</i>.</p>
4111	job	3138	<p>1) All the <i>tasks</i> carried out by one or more workers and/or units of equipment in the completion of their prescribed duties and grouped together under one title or definition (e.g. as on a <i>work order</i>).</p> <p>2) A defined area of accountability within an organization (e.g. as in 'my job').</p>
4112	job report	3811	A statement recording the work done and the condition of the <i>item</i> .
4113	logistic delay	4778/3.2	<p>That accumulated time during which a <i>maintenance action</i> cannot be performed due to the necessity to acquire <i>maintenance</i> resources, excluding any <i>administrative delay</i>.</p> <p>NOTE. Logistic delays can be due to, for example, travelling to unattended installations, pending arrival of spare parts, specialists, test equipment, information and suitable environmental conditions.</p>
4114	maintenance	4778/3.2	The combination of all technical and administrative <i>actions</i> , including <i>supervision actions</i> , intended to retain an <i>item</i> in, or restore it to, a state in which it can perform a required function.
4115	maintenance instructions	3811	<p>The document that describes in detail the procedure and circumstances for carrying out <i>maintenance</i>.</p> <p>NOTE. This document forms part of the <i>technical manual</i>.</p>
4116	maintenance time	4778/3.2	<p>The time interval during which a <i>maintenance action</i> is performed on an <i>item</i> either manually or automatically, including <i>technical delays</i> and <i>logistic delays</i>.</p> <p>NOTE. <i>Maintenance</i> may be carried out while the <i>item</i> is performing a required function.</p>
4117	overhaul	3811	A comprehensive <i>examination</i> and <i>restoration</i> of an <i>item</i> , or a major part thereof, to an <i>acceptable condition</i> .
4118	rehabilitation refurbishment depreciated		Extensive work intended to bring plant or buildings up to current acceptable functional conditions, often involving <i>modifications</i> and improvements.

No.	Term	Source	Definition
4119	repair	4778/3.2	That part of <i>corrective maintenance</i> in which manual <i>actions</i> are performed on the <i>item</i> .
4120	repair time	4778/3.2	That part of <i>active corrective maintenance time</i> during which <i>repair actions</i> are performed on an <i>item</i> .
4121	restoration; recovery	4778/3.2	That event when the <i>item</i> regains the ability to perform a required function after a <i>fault</i> .
4122	shortages time	3811	The period of time during which the <i>item</i> is unable to perform due to shortages of labour, spares, facilities, movement, etc.
4123	shutdown maintenance time	3811	The period of time during which <i>maintenance</i> is carried out whilst the <i>item</i> is out of <i>service</i> . NOTE. The <i>item</i> may be out of <i>service</i> due to either a planned shutdown or a <i>breakdown</i> .
4124	survey	3811	An <i>examination</i> , the written report of which would include a recommendation for any <i>action</i> deemed necessary.
4125	task	4778/3.1	1) The smallest indivisible part of an activity when it is broken down to a level best understood and performed by a specific <i>user</i> .
		3138	2) An identifiable part of a <i>job</i> , comprising a combination of <i>operations</i> .
4126	technical delay	4778/3.2	The accumulated time necessary to perform auxiliary technical <i>actions</i> associated with the <i>maintenance action</i> itself.
4127	tribology		The science and technology of interacting surfaces in relative motion and of related subjects and practices.
4128	work order job card <i>deprecated</i>	3811	A written instruction detailing work to be carried out and methods to be used.
4129	work requisition	3811	A document requesting work to be carried out.
4130	work specification	3811	A document describing the way in which the work is to be carried out. It may define the materials, tools, time, standards.

No.	Term	Source	Definition
4131	work study; organization and methods O & M abbreviation	3138	The systematic <i>examination</i> of activities in order to improve the effective use of human and other resources. NOTE. Although the processes involved are identical, work study differs from organization and methods in that the latter is normally reserved for and applied to managerial, administrative and clerical work.

4.2 Maintenance management terms

NOTE. The following terms are also applicable.

	3116 monitoring; supervision		
	3128 scheduled outage duration		
	3132 technical manual		
	3305 failure		
	3306 failure classification		
	3309 fault		
	3310 fault report; incidence report		
	4101 active maintenance time		
	4102 administrative delay		
	4103 check-out time		
	4113 logistic delay		
	4114 maintenance		
	4116 maintenance time		
	4119 repair		
	4121 restoration; recovery		
	4126 technical delay		
4201	active corrective maintenance time	4778/3.2	That part of the <i>active maintenance time</i> during which <i>actions</i> of <i>corrective maintenance</i> are performed on an <i>item</i> .
4202	active preventive maintenance time	4778/3.2	That part of the <i>active maintenance time</i> during which <i>actions</i> of <i>preventive maintenance</i> are performed on an <i>item</i> .
4203	automatic maintenance	4778/3.2	<i>Maintenance</i> accomplished without human intervention.
4204	condition appraisal		A formal and systematic appraisal of the condition of an <i>item</i> in respect of its ability to perform its required function.
4205	condition-based maintenance	4778/3.1	The <i>maintenance</i> carried out according to the need indicated by <i>condition monitoring</i> .
4206	consumable stock	3811	Expendable materials (for example oils, lubricants, nails, packing) that are held available for <i>maintenance</i> purposes.

No.	Term	Source	Definition
4207	controlled maintenance	4778/3.2	A method to sustain a desired quality of <i>service</i> by the systematic application of analysis techniques using centralized supervisory facilities and/or sampling to minimize <i>preventive maintenance</i> and to reduce <i>corrective maintenance</i> .
4208	corrective maintenance	4778/3.2	The <i>maintenance</i> carried out after <i>fault recognition</i> and intended to put an <i>item</i> into a state in which it can perform a required function.
4209	corrective maintenance time	4778/3.2	That part of the <i>maintenance time</i> during which <i>corrective maintenance</i> is performed on an <i>item</i> , including <i>technical delays</i> and <i>logistic delays</i> inherent in <i>corrective maintenance</i> .
4210	daywork	3811	Charging for work for which control standards have been determined, for example quality, but that cannot readily be measured in accordance with general principles. NOTE. The normal practice is to <i>record</i> labour, materials and plant used as the work proceeds, and to charge at standard rates plus agreed overheads.
4211	deferred maintenance	4778/3.2	<i>Corrective maintenance</i> which is not immediately initiated after a <i>fault recognition</i> but is delayed in accordance with given <i>maintenance</i> rules.
4212	elementary maintenance activity	4778/3.2	A unit of work into which a <i>maintenance</i> activity may be broken down at a given <i>indenture level</i> .
4213	emergency maintenance	3811	The <i>maintenance</i> that it is necessary to put in hand immediately to avoid serious consequences.
4214	fault correction	4778/3.2	<i>Actions</i> taken after <i>fault localization</i> to restore the ability of the faulty <i>item</i> to perform a required function.
4215	fault correction time	4778/3.2	That part of <i>active corrective maintenance time</i> during which <i>fault correction</i> is performed.
4216	fault diagnosis	4778/3.2	<i>Actions</i> taken for <i>fault recognition</i> , <i>fault localization</i> and cause identification.
4217	fault diagnosis time	4778/3.2	The time during which <i>fault diagnosis</i> is performed.
4218	fault localization fault location <i>deprecated</i>	4778/3.2	<i>Actions</i> taken to identify the faulty subitem at the appropriate <i>indenture level</i> .

No.	Term	Source	Definition
4219	fault localization time fault location time <i>deprecated</i>	4778/3.2	That part of active <i>corrective maintenance</i> during which <i>fault localization</i> is performed.
4220	fault recognition	4778/3.2	The event of a <i>fault</i> being recognized.
4221	forced outage duration	3811	Within a specified period of time, the period of time during which an <i>item</i> is incapable of performing its function because of a <i>fault</i> . NOTE. This term is used in the electricity supply industry.
4222	function-affecting maintenance	4778/3.2	A <i>maintenance action</i> during which one or more required functions of the <i>item</i> under <i>maintenance</i> are interrupted or degraded.
4223	function check-out	4778/3.2	<i>Actions</i> taken after <i>fault correction</i> to verify that the <i>item</i> has recovered its ability to perform the required function.
4224	function-degrading maintenance	4778/3.2	<i>Function-affecting maintenance</i> that degrades one or more of the required functions of a maintained <i>item</i> , but not to such an extent as to cause complete loss of all the functions.
4225	function-permitting maintenance	4778/3.2	<i>Maintenance action</i> during which one of the required functions of the <i>item</i> under <i>maintenance</i> is interrupted or degraded.
4226	function-preventing maintenance	4778/3.2	<i>Function-affecting maintenance</i> that prevents a maintained <i>item</i> from performing a required function by causing complete loss of all the functions.
4227	indenture level	4778/3.2	For <i>maintenance</i> . A level of subdivision of an item from the point of view of a <i>maintenance action</i> . NOTE 1. Examples of indenture levels could be a subsystem, a circuit board, a component. NOTE 2. The indenture level depends on the complexity of the <i>item's</i> construction, the <i>accessibility</i> to subitems, skill level of <i>maintenance</i> personnel, test equipment facilities, safety considerations, etc.
4228	level of maintenance	4778/3.2	The set of <i>maintenance actions</i> to be carried out at a specified <i>indenture level</i> . NOTE. Examples of a <i>maintenance action</i> are replacing a component, a printed circuit board, a subsystem.
4229	maintenance action; maintenance task	4778/3.2	A sequence of <i>elementary maintenance activities</i> carried out for a given purpose. NOTE. Examples are <i>fault diagnosis</i> , <i>fault localization</i> , <i>function check-out</i> or combinations thereof.

No.	Term	Source	Definition
4230	maintenance echelon; line of maintenance	4778/3.2	A position in an organization where specified <i>levels of maintenance</i> are to be carried out on an <i>item</i> . NOTE 1. Examples of maintenance echelons are: field, repair shop, manufacturer. NOTE 2. The maintenance echelon is characterized by the skill of the personnel, the facilities available, the location, etc.
4231	maintenance entity	4778/3.2	Any subitem of a given <i>item</i> which can have a <i>fault</i> and which, by alarm or any other means, can be unambiguously identified for replacement or <i>repair</i> .
4232	maintenance history	3811	A <i>record</i> of past <i>maintenance tasks</i> that is used for the purpose of <i>maintenance planning</i> .
4233	maintenance management	3811	The organization of <i>maintenance</i> within an agreed policy.
4234	maintenance man-hours MMH abbreviation	4778/3.2	The accumulated durations of the individual <i>maintenance times</i> , expressed in hours, used by all <i>maintenance</i> personnel for a given type of <i>maintenance action</i> or over a given time interval.
4235	maintenance philosophy	4778/3.2	A system of principles for the organization and execution of the <i>maintenance</i> .
4236	maintenance planning	3811	Deciding in advance the <i>jobs</i> , methods, materials, tools, machines, labour, time required and timing of <i>maintenance actions</i> .
4237	maintenance policy	4778/3.2	A description of the interrelationship between the <i>maintenance echelons</i> , the <i>indenture levels</i> and the <i>levels of maintenance</i> to be applied for the <i>maintenance</i> of an <i>item</i> .
4238	maintenance programme	3811	A time-based plan allocating specific <i>maintenance tasks</i> to specific periods.
4239	maintenance requirements	EOQ	A statement of the nature of the <i>maintenance</i> method, in particular the skill of the personnel involved, their facilities and the duration and frequency of <i>maintenance action</i> . NOTE 1. This information forms part of the <i>technical manual</i> . NOTE 2. Compare with 4304.
4240	maintenance support	4778/3.2	The provision on demand of the resources required to maintain an <i>item</i> under a given <i>maintenance policy</i> .

No.	Term	Source	Definition
4241	maintenance support performance	4778/3.2	The ability of a <i>maintenance</i> organization, under given conditions, to provide upon demand, the resources required to maintain an <i>item</i> , under a given <i>maintenance policy</i> . NOTE. The given conditions are related to the <i>item</i> itself and to the conditions under which the <i>item</i> is used and maintained.
4242	mean operating time between failures <i>MTBF abbreviation</i>	4778/3.2	The expectation of the operating time between <i>failures</i> .
4243	mean time between failures	4778/3.2	The expectation of the time between <i>failures</i> . NOTE. The use of the abbreviation MTBF in this sense is now deprecated.
4244	mean time to failure <i>MTTF abbreviation</i>	4778/3.2	The expectation of the time to <i>failure</i> . NOTE. The term is normally used in connection with non-repairable <i>items</i> .
4245	mean time to first failure <i>MTTFF abbreviation</i>	4778/3.2	The expectation of the time to first <i>failure</i> .
4246	mean time to restoration; mean time to recovery <i>MTTR abbreviation</i> mean time to repair <i>deprecated</i>	4778/3.2	The expectation of the time to <i>restoration</i> .
4247	modification	4778/3.2	Of an <i>item</i> . The combination of all technical and administrative <i>actions</i> intended to change an <i>item</i> .
4248	nugatory time non-productive time <i>deprecated</i>	3811	That portion of time for which payment is made but for which no <i>service</i> is rendered.
4249	off-site maintenance	4778/3.2	<i>Maintenance</i> performed at a location different from that where the <i>item</i> is used. NOTE. An example of off-site maintenance is the <i>repair</i> of a subitem at a <i>maintenance centre</i> .
4250	on-site maintenance; in situ maintenance; field maintenance	4778/3.2	<i>Maintenance</i> performed at the location where the <i>item</i> is used.
4251	opportunistic maintenance	4778/3.1	<i>Maintenance</i> of an <i>item</i> that is deferred or advanced in time when an unplanned opportunity becomes available.

No.	Term	Source	Definition
4252	other operational delay time	3811	The period of time during which the <i>item</i> is unable to perform due to a <i>failure</i> that has not been scheduled for <i>action</i> .
4253	parts list	3811	A definitive list of all <i>items</i> that form the <i>asset</i> . NOTE. This document forms part of the <i>technical manual</i> .
4254	planned maintenance	3811	The <i>maintenance</i> organized and carried out with forethought, control and the use of <i>records</i> to a predetermined plan. NOTE. <i>Preventive maintenance</i> is always part of planned maintenance; <i>corrective maintenance</i> may or may not be.
4255	preventive maintenance	4778/3.2	The <i>maintenance</i> carried out at predetermined intervals or according to prescribed criteria and intended to reduce the probability of <i>failure</i> or the degradation of the functioning of an <i>item</i> .
4256	preventive maintenance time	4778/3.2	That part of the <i>maintenance time</i> during which <i>preventive maintenance</i> is performed on an <i>item</i> , including <i>technical delays</i> and <i>logistic delays</i> inherent in <i>preventive maintenance</i> .
4257	reaction time		The time that elapses between the recognition of a need for <i>repair</i> and its execution.
4258	remote maintenance	4778/3.2	<i>Maintenance</i> of an <i>item</i> performed without physical access of the personnel to the <i>item</i> .
4259	running maintenance	3811	<i>Maintenance</i> that can be carried out whilst the <i>item</i> is in <i>service</i> .
4260	running maintenance time	3811	The period of time during which <i>maintenance</i> is carried out whilst the <i>item</i> is in <i>service</i> .
4261	scheduled maintenance	4778/3.2	The <i>preventive maintenance</i> carried out in accordance with an established time schedule. NOTE. In certain instances, for time read operating hours, distance travelled, etc. as appropriate.
4262	shutdown maintenance	3811	<i>Maintenance</i> that can be carried out only when the <i>item</i> is out of <i>service</i> .
4263	spares policy		A declared basis by which the holding of a <i>stock</i> of spares is determined.
4264	spares stock	5191	<i>Items</i> that are held available for <i>maintenance</i> purposes or for the replacement of defective parts. NOTE. If spares stock is associated with a saleable <i>product</i> , it is regarded as direct <i>stock</i> , whereas if associated with the fixed <i>assets</i> (e.g. plant, vehicles) it is regarded as indirect <i>stock</i> .

No.	Term	Source	Definition
4265	stock inventory <i>depreciated</i>	5191	All the tangible material <i>assets</i> of a company other than the fixed <i>assets</i> ; comprising all the finished or saleable <i>products</i> , all the <i>items</i> to be incorporated into the finished <i>products</i> and all the <i>items</i> to be consumed in the process of manufacturing the <i>product</i> or in the carrying out of the business. NOTE 1. Inventory, when used as a generic term, is synonymous with stock. This use is common in the USA and extensive in the UK. NOTE 2. An inventory, when used specifically, is defined as a list of tangible material <i>assets</i> . For production control purposes this can be limited to being a list of stock.
4266	storage life shelf-life <i>depreciated</i>	EOQ	The specified length of time prior to use for which <i>items</i> that are inherently subject to deterioration are deemed to remain fit for use under prescribed conditions.
4267	strategic spares		Spares held against circumstances that are not expected to arise routinely or frequently during the life of the <i>asset</i> but which would have serious consequences if they did occur.
4268	undetected fault time	4778/3.2	The time interval between <i>failure</i> and recognition of the resulting <i>fault</i> .
4269	unplanned maintenance	3811	The <i>maintenance</i> carried out to no predetermined plan.
4270	unscheduled maintenance	4778/3.2	The <i>maintenance</i> carried out not in accordance with an established time schedule, but after reception of an indication regarding the state of an <i>item</i> .

4.3 Maintainability terms

NOTE. Further maintainability terms are defined in sections 13 and 16 of BS 4778 : Section 3.2 : 1991.

4301	accessibility		A qualitative or quantitative measure of the ease of gaining access to a component for the purposes of <i>maintenance</i> .
4302	maintainability	4778/3.2	The probability that a given active <i>maintenance action</i> for an <i>item</i> under given conditions of use can be carried out within a stated time interval, when the <i>maintenance</i> is performed under stated conditions and using stated procedures and resources. NOTE. The term maintainability is also used to denote the maintainability performance quantified by this probability.

No.	Term	Source	Definition
4303	maintainability model	4778/3.2	A mathematical <i>model</i> used for prediction or estimation of <i>maintainability</i> performance measures of an <i>item</i> . NOTE. An example is the <i>maintenance tree</i> .
4304	maintainability requirements	4778/1	A statement of the principal means and frequency of preventing an <i>item</i> from failing or of restoring its function when it has failed. NOTE. Compare with 4239.
4305	maintenance tree	4778/3.2	A logic diagram showing the pertinent alternative sequences of <i>elementary maintenance activities</i> to be performed on an <i>item</i> and the conditions for their choice.
4306	modularity		A measure of the extent of an <i>asset's</i> ability to be disassembled into <i>modules</i> which are of common or interchangeable designs.
4307	module		A subassembly within an <i>item</i> of equipment or an <i>item</i> of equipment within a larger system, which may be removed, replaced or interchanged in one piece, usually without the need to adjust or dismantle other adjacent <i>items</i> .

4.4 Maintenance schedule and optimization terms

NOTE. The following terms are also applicable.

2117 model

2119 optimization

4261 scheduled maintenance

4401	bar chart	3138	A chart on which activities and their durations are represented by lines drawn to a common time scale showing a sequence of <i>operations</i> . NOTE 1. This definition is similar to 10021 in BS 4335 : 1987. NOTE 2. The term bar diagram is used to signify a means of depicting statistical information. See BS 5532 : Part 1 for the relevant definition.
4402	flow chart; procedure chart	3138	A graphical representation of a procedure, usually using symbols connected by flow lines.
4403	Gantt chart	3138	A <i>bar chart</i> used as a means of control on which work planned and work done are represented, showing their relation to each other and to time.
4404	maintenance schedule	3811	A comprehensive list of <i>items</i> and the <i>maintenance</i> required, including the interval at which <i>maintenance</i> should be performed. NOTE. This document forms part of the <i>technical manual</i> .

No.	Term	Source	Definition
4405	queuing theory	3138	The use of mathematical <i>models</i> and theorems in the analysis of systems in which <i>service</i> is provided under conditions of varying supply and demand.
4406	reliability centred maintenance RCM <i>abbreviation</i>		A systematic approach for identifying effective and efficient <i>preventive maintenance tasks</i> for equipment and <i>items</i> in accordance with a specific set of procedures and for establishing intervals between <i>maintenance tasks</i> .

Section 5. Terms relating to end-of-life

No.	Term	Source	Definition
5.1 Terms and definitions			
NOTE. The following term is also applicable. 2612 redundancy			
5101	disposal		The act of getting rid of an unwanted <i>item</i> by means of sale or otherwise.
5102	disposal instructions	3811	The document that describes in detail the method and precautions to be observed in discarding or otherwise disposing of an <i>asset</i> when it has failed or is no longer required for any reason. NOTE. This document forms part of the <i>technical manual</i> .
5103	obsolescent		Becoming, or about to become, obsolete, out of date or unobtainable.
5104	obsolete item		An <i>item</i> that is no longer being manufactured or supplied. NOTE. The reason may be that it is no longer required or that it has been superseded through technological advances.
5105	replacement theory; renewal theory		A study comparing various options for replacing, renewing or retaining an <i>asset</i> or component reaching the end of its life.
5106	scrap		<i>Items</i> or material discarded as being incapable of being rectified or salvaged within a particular manufacturing process.

Section 6. General terms

No.	Term	Source	Definition
6.1 Terms relating to information technology applications			
NOTE. The following terms are also applicable. 2119 optimization 3208 history record 4265 stock			
6101	card reader		A device that reads or senses <i>data</i> from a card and transforms these <i>data</i> into electrical signals.
6102	classification	EOQ	The act of grouping <i>items</i> into classes.
6103	codification	3811	The act of systematically sequencing, identifying and presenting <i>items</i> within their class or classes.
6104	computer	2382/1	A programmable functional unit that consists of one or more associated <i>processing units</i> and peripheral equipment, that is controlled by internally stored programs and that can perform substantial computation, including numerous arithmetical operations or logic operations, without human intervention during a run.
6105	computer aided design CAD <i>abbreviation</i>		The application of <i>computers</i> in the <i>interactive</i> mode for design, draughting and storing designs.
6106	computer aided manufacture CAM <i>abbreviation</i>		Manufacture in which <i>computers</i> are used to instruct and control production plant and equipment.
6107	computer integrated manufacture CIM <i>abbreviation</i>		Manufacture in which various computerized systems in a manufacturing plant are linked to provide an integrated manufacturing system. NOTE. Degrees of integration are possible, from simple links within a factory to a totally integrated system that networks the manufacturing function to the entire business enterprise.
6108	data	2382/1	A representation of facts, <i>concepts</i> or instructions in a formalized manner suitable for communication, interpretation or processing by human beings or by automatic means.
6109	disk pack	2382-12	An assembly of <i>magnetic disks</i> that can be removed as a whole from a disk unit, together with the associated container from which it cannot be separated.
6110	floppy (disk); flexible disk	2382-12	A flexible <i>magnetic disk</i> enclosed in a protective container.

No.	Term	Source	Definition
6111	hardware	2382/1	Physical equipment as opposed to programs, procedures, rules and associated documentation.
6112	information technology <i>IT abbreviation</i>		The technology of recording, storing, transmitting, processing and displaying <i>data</i> .
6113	interactive	3811	Having the ability to question and analyse information according to current needs. Communicating with the <i>computer</i> on the basis of <i>action</i> and response.
6114	keyboard		A manually operated device that is used to input instructions and <i>data</i> to a <i>computer</i> . NOTE. The majority of keyboards have a layout of alphanumeric and punctuation keys similar to that of a standard typewriter. Keyboards may also be designed for specialist applications, where for example the keys are grouped for ergonomic <i>efficiency</i> , or in alphabetical order or only use the numeric character set.
6115	language		A specific set of characters, words, punctuation, syntactic rules and conventions used for conveying information. NOTE. In the context of <i>data</i> processing, artificial languages are used for generating or expressing programs and for passing instructions to <i>computer</i> systems.
6116	magnetic disk	2382-12	A flat circular plate with a magnetizable surface layer on which <i>data</i> can be stored.
6117	magnetic tape	2382-12	A tape with a magnetizable surface layer on which <i>data</i> can be stored.
6118	numerical control <i>NC abbreviation</i>		The control of machine tools by means of codified <i>data</i> input by electronic or similar automatic means.
6119	operating system	2382/1	<i>Software</i> that controls the execution of programs and that may provide <i>services</i> such as resource allocation, scheduling, input/output control and <i>data</i> management. NOTE. Although operating systems are predominantly <i>software</i> , partial or complete <i>hardware</i> implementations are possible.
6120	physical asset register	3811	A <i>record</i> of <i>items</i> , including information such as constructional and technical details about each. NOTE. The physical asset register may be combined with an inventory (see note 2 to 4265 <i>item</i>).
6121	printer	2382-12	An output unit that produces a hard copy <i>record</i> of <i>data</i> mainly in the form of a sequence of discrete graphic characters belonging to one or more predetermined character sets.

No.	Term	Source	Definition
6122	processing unit central processing unit <i>deprecated</i>	2382/1	A functional unit that consists of one or more processors and their internal storages.
6123	random access memory RAM <i>abbreviation</i>	2381-12	A storage device in which <i>data</i> can be written and read NOTE. RAM is deprecated in the sense of direct access storage device.
6124	read only memory ROM <i>abbreviation</i>	2382-12	A storage device in which <i>data</i> , under normal conditions, can only be read.
6125	record		1) A set of related <i>data</i> or words treated as a unit. NOTE. As an example, in <i>stock</i> control each invoice could constitute one record.
		3811	2) To preserve information in a file.
6126	requirement specification	3811	A detailed brief of the <i>user's</i> requirements.
6127	software	2382/1	Intellectual creation comprising the programs, procedures, rules and any associated documentation pertaining to the <i>operation</i> of a <i>data</i> processing system. NOTE. Software is independent of the carrier used for transport.
6128	software specification	3811	The conversion of the <i>user's requirement specification</i> into file structures, report lay-outs, input, amend and delete routines.
6129	visual display unit VDU <i>abbreviation</i>	3811	A device, visually similar to a television set, that is used to display <i>data</i> from a <i>computer</i> .

6.2 Terms relating to education, training and qualifications

6201	apprenticeship		A formal contractual arrangement between an employee and employer for the training of the former in a specified skill or range of skills.
6202	authorized person		A <i>competent person</i> who is given authority to perform a given <i>task</i> or <i>tasks</i> .
6203	competence		The ability to perform a specific activity or range of activities satisfactorily and safely by virtue of training and experience.
6204	competent person		A person who, by virtue of training and experience, can perform specified <i>tasks</i> satisfactorily and safely.

No.	Term	Source	Definition
6205	continued education and training <i>CET abbreviation</i>		Education and training undertaken to extend a person's abilities after initially entering employment.
6206	continued professional development <i>CPD abbreviation</i>		Education and training undertaken by a professionally qualified person after registration as a member of a professional body. NOTE. Proof of an individual's CPD may be a requirement for maintaining professional status throughout working life.
6207	National Council for Vocational Qualifications <i>NCVQ abbreviation</i>		A body set up by Parliament to establish the standards of industrial education, training and experience that have to be met to qualify a person in a particular discipline or <i>job</i> category at a specified level of authority.
6208	trainee		A person undertaking a course of organized training that is designed to bring performance up to a specified level of <i>competence</i> or extend the range of abilities.
6209	vocational qualifications		The level of <i>competence</i> , usually determined by examination or <i>assessment</i> , required to confirm a person's ability to perform a specified <i>job</i> function within a trade or profession satisfactorily.
6.3 Miscellaneous terms			
NOTE. The following terms are also applicable. 1205 entity; item 2102 assessment			
6301	audit		A systematic <i>examination</i> of, for example, documents, reports, accounts, <i>stock</i> holdings or quality attributes. NOTE. Audits are usually performed to confirm a stated performance, quantify a particular situation or conform to a statutory requirement under company law.
6302	evaluation		Ascertainment, as closely as possible, of the numerical value of a given parameter or quantity.
6303	learning curve		A graphical representation of the improvement in performance of an <i>asset</i> or personnel over a period of time, that can be ascribed to the steadily increasing experience, skill levels and <i>competence</i> of individuals.
6304	repaired item	4778/3.2	A repairable <i>item</i> which is in fact repaired after a <i>failure</i> .

No.	Term	Source	Definition
6305	value analysis	3138	A systematic interdisciplinary <i>examination</i> of factors affecting the <i>cost</i> of a <i>product</i> or <i>service</i> , in order to devise means of achieving the specified purpose most economically at the required standard of quality and <i>reliability</i> .
6.4 Qualifying terms			
6401	active time		That part of <i>maintenance time</i> during which <i>maintenance</i> is actually performed on an <i>item</i> .
6402	estimated	4778/3.2	Qualifies a value obtained as the result of the <i>operation</i> made for the purpose of assigning, from the observed values in a sample, numerical values to the parameters of the distribution chosen as the statistical <i>model</i> of the population from which this sample is taken. NOTE. The result may be expressed either as a single numerical value, a point <i>estimate</i> , or as a confidence interval.
6403	instantaneous	4778/3.2	Qualifies the value, at a given instant of time, of a time-dependent variable quantity.
6404	intrinsic; inherent	4778/3.2	Qualifies a value determined when <i>maintenance</i> and operational conditions are assumed to be ideal.
6405	mean average <i>depreciated</i>	4778/3.2	1) The value obtained as the expectation of a random variable. 2) An integral whose magnitude depends on a time during a given interval divided by the time interval itself.
6406	observed data	4778/3.2	Values related to an <i>item</i> or a process obtained by direct observation. NOTE 1. Values referred to could be events, time instants, time intervals, etc. NOTE 2. When observed data are recorded, all relevant conditions and criteria should be stated.
6407	optimized		Balanced between maximum benefit and minimum <i>costs</i> by selection of the best combination of characteristics.
6408	predicted	4778/3.2	Qualifies a value, assigned to a quantity, before the quantity is actually observable, computed on the basis of earlier observed or <i>estimated values</i> of the same quantity or of other quantities using a mathematical model.

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Contract requirements

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

Any person who finds an inaccuracy or ambiguity while using this British Standard should notify BSI without delay so that the matter may be investigated swiftly.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services, Publications at Milton Keynes:
Tel: 0908 221166; Fax: 0908 322484.

In response to orders for international and European standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library, the Standardline Database, the BSI Information Technology Service (BITS) and its Technical Help to Exporters Service. Contact Customer Services, Information at Milton Keynes:
Tel: 0908 226888.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Head of Customer Services, Membership Group at Milton Keynes: Tel: 0908 226777.

Copyright

Copyright subsists in all BSI publications and no part may be reproduced in any form without the prior permission in writing of BSI. This does not preclude the free use, in the course of implementing the standard of necessary details such as symbols and size, type or grade designations including use by incorporation into computer programs, but where these details are reproduced including without limitation in printed form, in computer programs or in any other form whatsoever, the permission in writing of BSI must be obtained and if granted will be on terms including royalty, before the product is sold, licensed or otherwise exploited for commercial gain. Enquiries about copyright should be made to the Copyright Manager, Publications at Milton Keynes.
