BSI Standards Publication

# Health and safety in welding and allied processes — Arc welding fume components

**bsi.**

...making excellence a habit.™

**National foreword**

This Published Document is the UK implementation of ISO/TR 13392:2014.

The UK participation in its preparation was entrusted to Technical Committee WEE/40, Health and safety in welding.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information

ISO/TR 13392 was prepared by the International Institute of Welding, Commission VIII Health and Safety. IIW is recognized as an international standardizing body in the field of welding in accordance with Council Resolution 42/1999.

## Introduction

This Technical Report constitutes the considered judgement of experts on the range of principal components of fume which can be emitted from arc welding processes and identifies, as key components, those which are of greatest occupational hygiene significance and therefore require the most stringent control measures to ensure that a welder is not exposed to an excessive level of the substance concerned.

The report is intended to assist in hazard appreciation, risk assessment and risk control and thus contribute to improving the health and safety of welders and those working with them. It is also intended to assist medical professionals in their care of welders and others exposed to welding fume.

The constituent components of particular consumables and the fume arising from their use should be gained from the Safety Data Sheet produced by the manufacturer and supplied with the consumables.

# Health and safety in welding and allied processes — Arc welding fume components

## 1 Scope

This Technical Report provides guidance, based on the experiences of experts, on the components of fume emitted from a range of arc welding processes and consumable types.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/TR 25901, *Welding and related processes — Vocabulary*

## 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/TR 25901 apply.

## 4 Background

Arc welding processes emit fume. This is a complex, dynamic mixture of particulates derived mainly from the welding consumable but also the metal and any coatings and contaminants present. Most of the particles are in the respirable range which means that they can penetrate to the innermost area of the lung where they have the greatest potential to do harm. Many particles contain metal compounds, often as complex oxides and sometimes within a core surrounded by a shell. Some of the components of the fume are at least potentially biologically active. It is essential to be aware of these components when undertaking health and safety risk assessments of welding processes.

[Table 1](#)<sup>1)</sup> provides a general awareness to those responsible for making assessments or for the health care of welders and those who work with them. It identifies the principal and key components likely to be contained within the fume from a range of welding processes and consumable types. In this context, a *principal component*<sup>2)</sup> is a component that is of some occupational hygiene significance while the *key component*<sup>3)</sup> is the one that has the greatest occupational hygiene significance and therefore requires the most stringent control measures to ensure that a welder is not exposed to an excessive level of the substance concerned, i.e. it is the component whose limit value is exceeded at the lowest welding fume concentration.

---

1) This table is derived from that shown in ISO 15011-4.

2) A principal component is a component of occupational hygiene significance.

3) Key components have the greatest occupational hygiene significance and therefore require the most stringent control measures to ensure that a welder is not exposed to an excessive level of the substance(s) concerned, i.e. a component whose limit value is exceeded at the lowest welding fume concentration.

**Table 1 — Principal and key components of commonly encountered arc welding fumes**

Type of process <sup>a</sup>	Type of consumable	Typical principal components	Other possible principal components	Typical key component
MMA (SMAW) 111	Unalloyed and low alloy steel <sup>b</sup>	Fe, Mn, Cr, Cr(VI) Ni, Cu	F	Mn, Cr or Cr(VI) <sup>d</sup>
	High alloy steel <sup>c</sup>	Cr, Cr(VI), Fe, Mn, Ni	F	Cr(VI) or Ni
	Aluminium	Al, Cu, Mg, Mn, Zn	Be, Cl, F	Al, Mn or Zn
	Cast iron	Ni, Cu, Fe, Mn	Ba, F	Ni or Cu
	Hardfacing	Co, Cr, Cr(VI), Fe, Ni, Mn	V	Co, Cr, Cr(VI) Ni or Mn
	Work hardening	Fe, Mn, Cr		Mn
	Nickel-based	Co, Cr, Cr(VI) Fe, Ni, Mn	Fe	Cr, Cr(VI) or Ni
	Copper-based	Cu, Ni		Cu or Ni
MIG/MAG/TIG (GMAW/GTAW) 131, 135, 141	Unalloyed and low alloy steel <sup>b</sup>	Fe, Mn, Cr, Cr(VI) Ni, Cu		Mn, Cr or Cr(VI) <sup>d</sup>
	High alloy steel <sup>c</sup>	Cr, Cr(VI), Fe, Mn, Ni		Cr, Cr(VI) or Ni
	Aluminium alloys	Al, Mg, Mn, Zn		Al, Mn or Zn
	Nickel-based	Co, Cr, Cr(VI), Mn, Ni	Fe	Cr, Cr(VI) or Ni
	Copper-based	Cu, Ni		Cu or Ni
Gas-shielded tubular cored arc welding (FCAW) 132, 133, 136, 137, 143	Unalloyed and low alloy steel <sup>b</sup>	Fe, Mn, Cr, Cr(VI) Ni, Cu	F	Mn, Cr or Cr(VI)
	High alloy steel <sup>c</sup>	Cr, Cr(VI), Fe, Mn, Ni	F	Cr(VI) or Ni
	Hardfacing	Co, Cr, Cr(VI), Fe, Ni, Mn	V	Co, Cr, Cr(VI) Ni or Mn
	Nickel-based	Co, Cr, Cr(VI), Mn, Ni	Fe	Cr, Cr(VI) or Ni
Self-shielded tubular cored arc welding (FCAW) 114	Unalloyed and low alloy steel <sup>b</sup>	Fe, Mn, Cr, Ni, Cu, Al	Ba, F	Mn
	High alloy steel <sup>c</sup>	Cr, Cr(VI), Fe, Mn, Ni, Al	Ba, F	Cr(VI) or Ni
	Hardfacing	Co, Cr, Cr(VI), Fe, Ni, Mn, Al	V	Co, Cr, Cr(VI) Ni or Mn

<sup>a</sup> For welding process numbers, see ISO 4063.

<sup>b</sup> Unalloyed and low alloyed steels are here considered to have < 5 % combined alloying elements.

<sup>c</sup> High alloyed steels are here considered to have ≥ 5 % combined alloying elements.

<sup>d</sup> For the unalloyed and low alloyed steels, the Cr(VI) amount can be considered negligible compared to Cr(VI) from high alloyed steels (e.g. Cr(VI) in high alloyed steels is 3–6 % and in low alloyed steel 0,05 % in the fume box, see ISO 15011-1).

# British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

## About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

## Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at [bsigroup.com/standards](http://bsigroup.com/standards) or contacting our Customer Services team or Knowledge Centre.

## Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at [bsigroup.com/shop](http://bsigroup.com/shop), where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

## Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to [bsigroup.com/subscriptions](http://bsigroup.com/subscriptions).

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

**PLUS** is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit [bsigroup.com/shop](http://bsigroup.com/shop).

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email [bsmusales@bsigroup.com](mailto:bsmusales@bsigroup.com).

## BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

## Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

## Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI. Details and advice can be obtained from the Copyright & Licensing Department.
