

BSI Standards Publication

**Guidance on transition periods  
for standards developed  
by ISO/TC 84 — Devices for  
administration of medicinal  
products and catheters**

**National foreword**

This Published Document is the UK implementation of ISO/TR 19244:2014.

The UK participation in its preparation was entrusted to Technical Committee CH/84, Catheters and syringes.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. [www.iso.org/directives](http://www.iso.org/directives)

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. [www.iso.org/patents](http://www.iso.org/patents)

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 84, *Devices for administration of medicinal products and intravascular catheters*.

## Introduction

This Technical Report outlines an ISO/TC 84 recommended transition period for newly published standards. It describes the recommended plan and the rationale for transitioning from “old versions” or “outdated” standards, which have been updated or replaced by new ISO/TC 84 standards. It addresses the concepts of “Grandfathering” and “Transition Periods” relative to compliance requirements with new standards.

When new International Standards are issued, the standard is valid from the date of publication. When new versions of existing International Standards are issued, the new standard is valid from the date of publication and the previous version of the standard is withdrawn. In certain cases, the previous version can still be valid for a certain period of time.

As a new standard does not specify any transition period, this report provides guidance on code of conduct in relation to implementing standards in manufacturing medical devices covered by ISO/TC 84 standards.

New or revised standards might influence both development of new products or need for changes of marketed devices. Both issues are addressed in this report.

The intent of the transition period is to allow a reasonable amount of time for the development of the resources and test method/validation and documentation time to meet the new requirements and to fulfil the entire approval process.

The transition period also includes sufficient time for the manufacturer to work with a Notified Body (and in turn, Competent Authorities) to approve this change.

NOTE There can be legal or regulatory requirements that take precedence over the recommendations in this Technical Report.

# Guidance on transition periods for standards developed by ISO/TC 84 — Devices for administration of medicinal products and catheters

## 1 Scope

This Technical Report outlines the recommended transition plans for all the TC 84 standards:

- Needle-based Injection systems [ISO 11608 (all parts)];
- Sharps Injury Protection (ISO 23908);
- Sharps Containers (ISO 23907),
- Aerosol Drug Delivery Devices (ISO 20072);
- Needle-free injection systems (ISO 21649);
- Syringes [ISO 7886 (all parts), ISO 8537, ISO 9626];
- Needles (ISO 6009, ISO 7864);
- Intravascular Catheters and Ports [ISO 10555 (all parts), ISO 11070].

## 2 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

### 2.1

#### **grandfathering**

acceptance of no need for changes to a marketed device that has exhibited no safety or performance issues, without meeting the latest version of an ISO/TC 84 standard

### 2.2

#### **transition period**

timeframe from the date of publication of a new ISO/TC 84 standard to when a manufacturer should no longer claim compliance with a previous version of the standard when marketing a new device or a device with a significant design change

### 2.3

#### **significant design change**

modification of the product, which either modifies essential performance and/or introduces new risks that need to be assessed

## 3 Recommendations for implementing ISO/TC 84 standards

### 3.1 Marketed devices (Grandfathering)

A marketed device does not need to meet the requirements of a new or revised ISO/TC 84 standard. This is referred to as the “grandfather” clause, or “grandfathered” devices.

In cases where:

- a) sufficient post-market safety and quality data exist and demonstrate that performance of the devices is acceptable in relation to the issues addressed in the new standards, and
- b) a risk assessment is updated at least annually showing no need for further risk control (see ISO 14971:2007, definition 2.19),

the grandfathering concept applies.

In cases where significant design changes to the marketed product are made, the grandfathering concept should not be applied and it is recommended that a design verification is performed in accordance with the latest version of the ISO/TC 84 standard.

### **3.2 Non-marketed devices**

It is recommended that non-marketed devices are designed to meet the requirements of the latest edition of the applicable ISO/TC 84 standards. However, this will not be possible in all cases and it is recommended that new-marketed devices comply with the new standard no later than three years after its publication. Beyond that point, a Notified Body or regulator should not accept a manufacturer's desire to release new products referring to the previous version of the applicable ISO/TC 84 standard.

### **3.3 Rationale for the transition period**

The rationale for this transition period is to enable:

- a marketed device, which may not meet the latest version of applicable ISO/TC 84 standards, to nonetheless stay on the market, as long as the conditions in [3.1](#) are met;
- non-marketed devices to be released to the market without fulfilling the requirements of newly published ISO/TC 84 standards.

## Bibliography

- [1] ISO 6009, *Hypodermic needles for single use — Colour coding for identification*
- [2] ISO 7864, *Sterile hypodermic needles for single use*
- [3] ISO 7886 (all parts), *Sterile hypodermic syringes for single use*
- [4] ISO 8537, *Sterile single-use syringes, with or without needle, for insulin*
- [5] ISO 9626, *Stainless steel needle tubing for the manufacture of medical devices*
- [6] ISO 10555 (all parts), *Intravascular catheters — Sterile and single-use catheters*
- [7] ISO 11070, *Sterile single-use intravascular introducers, dilators and guidewires*
- [8] ISO 11608 (all parts), *Needle-based injection systems for medical use — Requirements and test methods*
- [9] ISO 14971:2007, *Medical devices — Application of risk management to medical devices*
- [10] ISO 20072, *Aerosol drug delivery device design verification — Requirements and test methods*
- [11] ISO 21649, *Needle-free injectors for medical use — Requirements and test methods*
- [12] ISO 23907, *Sharps injury protection — Requirements and test methods — Sharps containers*
- [13] ISO 23908, *Sharps injury protection — Requirements and test methods — Sharps protection features for single-use hypodermic needles, introducers for catheters and needles used for blood sampling*

# British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

## About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

## Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at [bsigroup.com/standards](http://bsigroup.com/standards) or contacting our Customer Services team or Knowledge Centre.

## Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at [bsigroup.com/shop](http://bsigroup.com/shop), where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

## Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to [bsigroup.com/subscriptions](http://bsigroup.com/subscriptions).

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

**PLUS** is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit [bsigroup.com/shop](http://bsigroup.com/shop).

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email [bsmusales@bsigroup.com](mailto:bsmusales@bsigroup.com).

## BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

## Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

## Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use.
