BSI Standards Publication

Processed cheese products — Calculation of content of added phosphate expressed as phosphorus

bsi.

...making excellence a habit.™

National foreword

This Published Document is the UK implementation of ISO/TS 18083:2013.

The UK participation in its preparation was entrusted to Technical Committee AW/5, Chemical analysis of milk and milk products.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. www.iso.org/directives

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. www.iso.org/patents

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 34, *Food products*, Subcommittee SC 5, *Milk and milk products* and the International Dairy Federation (IDF). It is being published jointly by ISO and IDF.

Foreword

IDF (the International Dairy Federation) is a non-profit organization representing the dairy sector worldwide. IDF membership comprises National Committees in every member country as well as regional dairy associations having signed a formal agreement on cooperation with IDF. All members of IDF have the right to be represented on the IDF Standing Committees carrying out the technical work. IDF collaborates with ISO in the development of standard methods of analysis and sampling for milk and milk products.

The main task of Standing Committees is to prepare International Standards. Draft International Standards adopted by the Standing Committees are circulated to the National Committees for endorsement prior to publication as an International Standard. Publication as an International Standard requires approval by at least 50 % of IDF National Committees casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, a Standing Committee may decide to publish another type of normative document, which is called by IDF: *Reviewed method*. Such a method represents an agreement between the members of a Standing Committee and is accepted for publication if it is approved by at least 50 % of the committee members casting a vote. A *Reviewed method* is equal to an ISO/PAS or ISO/TS and will, therefore, also be published jointly under ISO conditions.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. IDF shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

ISO/TS 18083|IDF/RM 51 was prepared by the International Dairy Federation (IDF) and Technical Committee ISO/TC 34, *Food products*, Subcommittee SC 5, *Milk and milk products*. It is being published jointly by IDF and ISO.

All work was carried out by ISO-IDF experts from the Standing Committee on Analytical Methods for Processing Aids and Indicators (SCAMPAI).

This first edition of ISO/TS 18083|IDF/RM 51 cancels and replaces IDF 51B:1991, which has been technically revised.

Processed cheese products — Calculation of content of added phosphate expressed as phosphorus

1 Scope

The method in this Technical Specification specifies the calculation of the approximate content of phosphorus from added phosphate salts and phosphorus containing pH-regulating agents in processed cheese products. The method is applicable to processed cheese products derived mainly from cheese varieties with a P:N ratio of $0,12 \pm 0,02$ and containing no ingredients in quantities substantially affecting the P:N ratio of the cheese raw material.

NOTE The Cheddar, Cheshire, Edam, Emmental, Gouda, Greyerzer (Gruyère), Hergards, Tilsiter, Samsøe and Svecia cheese varieties generally have P:N ratios within the limits stated in the Scope. A number of cheese varieties, e.g. white mould cheeses, cheeses of the Munster type, most goat cheeses, and various non-matured and matured cream cheeses can have lower P:N ratios. Limited amounts of milk or whey powder and ham can be present as optional ingredients without significantly changing the P:N ratio. In other cases, it is intended that the applicability of the approach be critically evaluated before use.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable to its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 2962|IDF 33, *Cheese and processed cheese products — Determination of total phosphorus content — Molecular absorption spectrometric method*

ISO/TS 17837|IDF/RM 25, *Processed cheese products — Determination of nitrogen content — Kjeldahl method*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

content of added phosphate in processed cheese products

content of phosphorus calculated by the specified procedure

Note 1 to entry: It is expressed as phosphorus, and expressed as a mass fraction (%).

4 Principle

The contents of phosphorus and nitrogen are determined. The phosphorus content attributable to emulsifying agents and phosphorus-containing pH regulating agents is obtained by correcting the total phosphorus content of the sample for the phosphorus content derived from the cheese. The maximum likely P:N ratio for cheese is assumed.

5 Procedure

Determine the phosphorus and the nitrogen content of the sample, respectively, in accordance with ISO 2962|IDF 33:2010 and ISO/TS 17837|IDF/RM 25:2008, respectively.

6 Calculation and expression of results

Calculate the content of added phosphate derived from emulsifying agents or phosphoric acid pH agents, expressed as phosphorus, expressed as a mass fraction (%), using Formula (1).

The content of added phosphate is given by Formula (1):

$$W_P - 0,14W_N \quad (1)$$

where

w_P is the total phosphorus content of the sample, expressed as a mass fraction (%);

w_N is the nitrogen content of the sample, expressed as a mass fraction (%);

0,14 is the presumed maximum level of the P:N ratio (0,12 + 0,02).

7 Test report

The test report shall specify:

- a) a reference to this Technical Specification, i.e. ISO/TS 18083|IDF/RM 51;
- b) the method used;
- c) the result(s) obtained;
- d) any operating conditions not specified in this Technical Specification or regarded as optional, as well as any circumstances that might have influenced the results;
- e) all details required for the complete identification of the sample.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.
