Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 7091 was prepared by Technical Committee ISO/TC 2, *Fasteners*.

This second edition cancels and replaces the first edition (ISO 7091:1983), which has been technically revised.

Plain washers — Normal series — Product grade C

1 Scope

This International Standard specifies the characteristics of normal-series, product-grade-C plain washers in the 100 HV hardness class and of nominal sizes (nominal thread diameters) ranging from 1,6 mm to 64 mm inclusive.

Washers of hardness class 100 HV are suitable for

- hexagon bolts and screws of product grade C in property classes up to and including 6.8;
- hexagon nuts of product grade C in property classes up to and including 6;
- case-hardened thread rolling screws.

If dimensions other than those listed in this International Standard are required, they should be selected from those given in ISO 887.

When soft material pieces are clamped, or large clearance holes in the workpiece are used, the user should check the technical suitability of this type of washer.

2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this International Standard. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

4 Requirements and International Standards of reference

See Table 3.

Table 3 — Specifications and International Standards of reference

Material ^a		Steel
Mechanical properties	Hardness class	100 HV
	Hardness range ^b	100 HV to 200 HV
Tolerances	Product grade	C
	International Standard	ISO 4759-3
Surface finish	<p>Plain: i.e. washers to be supplied in natural finish, treated with a protective lubricant or with other coatings as agreed by customer and supplier.</p> <p>Requirements for electroplating covered in ISO 4042.</p> <p>Requirements for non-electrolytically applied zinc flake coatings covered in ISO 10683.</p> <p>All tolerances shall apply prior to the application of a plating or coating.</p>	
Workmanship	Parts shall be free of irregularities or detrimental defects. No protruding burrs shall appear on the washer.	
Acceptability	Acceptance procedure covered in ISO 3269.	
<p>^a Other metallic materials as agreed between customer and supplier.</p> <p>^b Hardness testing according to ISO 6507-1.</p> <p>Test force: HV 2 for nominal thickness $h \leq 0,6$ mm</p> <p> HV 10 for nominal thickness $0,6 < h \leq 1,2$ mm</p> <p> HV 30 for nominal thickness $h > 1,2$ mm</p>		

5 Designation

EXAMPLE A normal-series, product-grade-C plain washer made of steel, of nominal size 8 mm and hardness class 100 HV is designated as follows:
