AMENDMENT 1
2012-07-15

**Rubber and rubber products —
Determination of the composition of
vulcanizates and uncured compounds by
thermogravimetry —**

Part 2:
**Acrylonitrile-butadiene and halobutyl
rubbers**

AMENDMENT 1

*Caoutchouc et produits à base de caoutchouc — Détermination
de la composition des vulcanisats et mélanges non vulcanisés par
thermogravimétrie —*

Partie 2: Caoutchoucs acrylonitrile-butadiène et butyl halogéné

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO 9924-2:2000 was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 2, *Testing and analysis*.

Rubber and rubber products — Determination of the composition of vulcanizates and uncured compounds by thermogravimetry —

Part 2: Acrylonitrile-butadiene and halobutyl rubbers

AMENDMENT 1

The procedure described in 6.2 for replacing the nitrogen, used to purge the oven, by air or oxygen at 800 °C is dangerous, and the purpose of this Amendment is to modify 6.2.9 and 6.2.11 to make it safer. At the same time, the normative references clause has been updated.

Page 1, Clause 2

Replace the text of this clause by the following:

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 1407, *Rubber — Determination of solvent extract*

Page 4, Subclause 6.2.9

Add, at the end of the subclause, an instruction to lower the temperature to 300 °C, so that the text becomes:

Maintain the oven temperature at 800 °C until the mass indicated on the mass/temperature (or mass/time) plot is constant and then lower the temperature to 300 °C.

Page 4, Subclause 6.2.11

Add, at the beginning of the subclause, an instruction to raise the temperature to 800 °C again, so that the text becomes:

Raise the oven temperature to 800 °C as rapidly as possible and maintain it at this temperature for 15 min or until the mass indicated on the plot is constant.
