NOTE - The following note numbers correspond to the footnotemarks listed in the table above:

- 1 The use of this mapping alternative is not applicable.
- 2 The use of the subtype `product_definition_formation_with_specified_source` is not recommended in the general case. If compatibility with AP203 is required for a postprocessor, the postprocessor should at a minimum process the information from the supertype entity `product_definition_formation`.
- 3 The use of this mapping alternative is not applicable.

5.2 AIM EXPRESS short listing

This clause specifies the EXPRESS schema that uses elements from the integrated resources and the AICs and contains the types, entity specializations, rules, and functions that are specific to this part of ISO 10303. This clause also specifies modifications to the text for constructs that are imported from the integrated resources and the AICs. The definitions and EXPRESS provided in the integrated resources for constructs used in the AIM may include select list items and subtypes that are not imported into the AIM. Requirements stated in the integrated resources that refer to such items and subtypes apply exclusively to those items that are imported into the AIM.

NOTE 1 The following conventions apply for the definition text:

- Terms written in boldface refer to the AIM objects, i.e., ‘**circle**’ refers to the entity as defined in ISO 10303-42;
- Terms not written in boldface refer to the concept, i.e., ‘circle’ refers to the concept of a round plane figure whose circumference is everywhere equidistant from its centre.

NOTE 2 The following short form and the long form documented in annex A correspond to conformance class CC8 of this part of ISO 10303 which includes all UoFs.

5.2.2 electrotechnical_design entities

5.2.2.1 electrotechnical_design entity definitions

5.2.2.1.1 annotation_occurrence_associativity

An **annotation_occurrence_associativity** is an **annotation_occurrence_relationship** that relates an element of annotation to the leader or projection curve which visually directs information in the drawing to the element or to the fill area whose boundary is derived from the element.

NOTE The definition of this entity is identical to the definition in ISO 10303-202 and ISO 10303-214.

EXPRESS specification:

```
*)
ENTITY annotation_occurrence_associativity
  SUBTYPE OF (annotation_occurrence_relationship);
WHERE
  WR1: SIZEOF(TYPEOF(SELF.related_annotation_occurrence) *
  ['ELECTROTECHNICAL_DESIGN.ANNOTATION_FILL_AREA_OCCURRENCE',
   'ELECTROTECHNICAL_DESIGN.PROJECTION_CURVE',
   'ELECTROTECHNICAL_DESIGN.LEADER_CURVE']) = 1;
END_ENTITY;
(*
```

Attribute definitions:

SELF.related_annotation_occurrence: the leader, projection curve, or fill area that is associated to the annotation.

SELF.relatng_annotation_occurrence: the **annotation_occurrence** that is to be associated with a leader, projection curve, or fill area.

Formal propositions:

WR1: the **related_annotation_occurrence** shall be a **leader_curve**, **projection_curve**, or **annotation_fill_area_occurrence**.

5.2.2.1.2 applied_action_assignment

An **applied_action_assignment** is a type of **action_assignment** that assigns an **action** to a particular piece of product data.

EXPRESS specification:

```
*)
ENTITY applied_action_assignment
  SUBTYPE OF (action_assignment);
  items : SET [1:?] OF action_item;
END_ENTITY;
```

(*

Attribute definitions:

items: the set of items to which the **action** is assigned.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_action_assignment** entity:

— restrict_applied_action_assignment (see 5.2.3.101).

5.2.2.1.3 applied_action_request_assignment

An **applied_action_request_assignment** is a type of **action_request_assignment** that assigns an **action** to a particular piece of product data.

EXPRESS specification:

```
*)
ENTITY applied_action_request_assignment
  SUBTYPE OF (action_request_assignment);
  items : SET [1:?] OF action_request_item;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the **action_request** is assigned.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_action_request_assignment** entity:

— restrict_applied_action_request_assignment (see 5.2.3.102).

5.2.2.1.4 applied_approval_assignment

An **applied_approval_assignment** is a type of **approval_assignment** that assigns an **approval** to a particular piece of product data.

EXPRESS specification:

```
*)
ENTITY applied_approval_assignment
  SUBTYPE OF (approval_assignment);
  items : SET [1:?] OF approval_item;
END_ENTITY;
(*
```

Attribute definitions:

ISO 10303-212:2001(E)

items: the set of items to which the **approval** is assigned.

5.2.2.1.5 applied_certification_assignment

An **applied_certification_assignment** is a type of **certification_assignment** that assigns a **certification** to a **certification_item**.

EXPRESS specification:

```
*)
ENTITY applied_certification_assignment
  SUBTYPE OF (certification_assignment);
  items : SET [1:?] OF certification_item;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of **items** to which the **certification** is assigned. An **applied_classification_assignment** is a type of **classification_assignment** that assigns classification information to a particular piece of product data.

5.2.2.1.6 applied_classification_assignment

An **applied_classification_assignment** is a type of **classification_assignment** that assigns classification information to a particular piece of product data.

EXPRESS specification:

```
*)
ENTITY applied_classification_assignment
  SUBTYPE OF (classification_assignment);
  items : SET [1:?] OF classification_item;
WHERE
  WR1: applied_classification_assignment_correlation(SELf);
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the classification information is assigned.

Formal propositions:

WR1: The **applied_classification_assignment_correlation** function that correlates the role **names** of the **assigned_group** to elements of product data shall be satisfied.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_classification_assignment** entity:

— **classification_assignment_subtype_exclusiveness** (see 5.2.3.8);

- restrict_applied_classification_assignment_role (see 5.2.3.103);
- restrict_class_system_assignment_for_approval_status (see 5.2.3.107);
- restrict_class_system_assignment_for_class (see 5.2.3.108);
- restrict_class_system_assignment_for_document_type (see 5.2.3.109);
- restrict_class_system_assignment_for_planar_extent (see 5.2.3.110);
- restrict_class_system_assignment_for_security_classification_level.

5.2.2.1.7 applied_contract_assignment

An **applied_contract_assignment** is a type of **contract_assignment** that assigns a **contract** to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY applied_contract_assignment
  SUBTYPE OF (contract_assignment);
  items : SET [1:?] OF contract_item;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the **contract** is assigned.

5.2.2.1.8 applied_date_and_time_assignment

The **applied_date_and_time_assignment** is a type of **date_and_time_assignment** that assigns a date and a time to a particular piece of product data. The date and time that are assigned specify the date and the time when an action is intended to take place or when an action took place.

EXPRESS specification:

```

*)
ENTITY applied_date_and_time_assignment
  SUBTYPE OF (date_and_time_assignment);
  items : SET [1:?] OF date_and_time_item;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the **date_and_time** is assigned.

5.2.2.1.9 applied_date_assignment

The **applied_date_assignment** is a type of **date_assignment** that assigns a date to a particular piece of product data. The date that is assigned specifies the date when an action is intended to take place or when an action took place.

EXPRESS specification:

```
*)
ENTITY applied_date_assignment
  SUBTYPE OF (date_assignment);
  items : SET [1:?] OF date_item;
WHERE
  WR1: ( NOT ( SELF.role.name = 'actual end' ) ) OR
        item_correlation ( SELF.items , ['ACTION' ,
        'ORGANIZATIONAL_PROJECT' , 'EFFECTIVITY' ] ) ;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the **date** is assigned.

Formal propositions:

WR1: If the **role** has a **name** of 'actual end', only items of type **action**, **organizational_project**, or **effectivity** shall be in the set of **items**.

5.2.2.1.10 applied_document_reference

An **applied_document_reference** is a type of **document_reference** that assigns a **document** to a particular piece of product data.

EXPRESS specification:

```
*)
ENTITY applied_document_reference
  SUBTYPE OF (document_reference);
  items : SET [1:?] OF document_reference_item;
WHERE
  WR1: applied_document_reference_correlation(SELF);
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the **document** is assigned.

Formal propositions:

WR1: The **applied_document_reference_correlation** function that correlates the role **names** of the **assigned_document** to elements of product data shall be satisfied.

5.2.2.1.11 applied_document_usage_constraint_assignment

An **applied_document_usage_constraint_assignment** is a type of **document_usage_constraint_assignment** that assigns a **document_usage_constraint** to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY applied_document_usage_constraint_assignment
  SUBTYPE OF (document_usage_constraint_assignment);
  items : SET [1:?] OF document_reference_item;
WHERE
  WR1:
  applied_document_usage_constraint_assignment_correlation(SELF);
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the **document_usage_constraint** is assigned.

Formal propositions:

WR1: The **applied_document_usage_constraint_assignment_correlation** function that correlates the role **names** of the **assigned_document_usage** to elements of product data shall be satisfied.

5.2.2.1.12 applied_effectivity_assignment

An **applied_effectivity_assignment** is a type of **effectivity_assignment** that assigns an **effectivity** to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY applied_effectivity_assignment
  SUBTYPE OF (effectivity_assignment);
  items : SET [1:?] OF effectivity_item;
WHERE
  WR1: SIZEOF ( ['ELECTROTECHNICAL_DESIGN.'+ 'LOT_EFFECTIVITY' ,
                'ELECTROTECHNICAL_DESIGN.'+ 'SERIAL_NUMBERED_EFFECTIVITY' ,
                'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION_EFFECTIVITY']*
            TYPEOF ( SELF.assigned_effectivity ) ) =0;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the **effectivity** is assigned.

ISO 10303-212:2001(E)

Formal propositions:

WR1: An **applied_effectivity_assignment** shall have an **assigned_effectivity** which is not of type **lot_effectivity**, **serial_numbered_effectivity**, or **product_definition_effectivity**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_effectivity_assignment** entity:

Ñ **effectivity_assignment_subtype_exclusiveness** (see 5.2.3.57);

Ñ **restrict_effectivity_assignment_for_class_category_usage** (see 5.2.3.115).

5.2.2.1.13 applied_event_occurrence_assignment

An **applied_event_occurrence_assignment** is a type of **event_occurrence_assignment** that assigns an **event_occurrence** to a particular piece of product data.

NOTE See application object definition for **Event_reference** (see 4.2.130) for more information.

EXPRESS specification:

```
* )
ENTITY applied_event_occurrence_assignment
  SUBTYPE OF (event_occurrence_assignment);
  items : SET [1:?] OF event_occurrence_item;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the **event_occurrence** is assigned.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_event_occurrence_assignment** entity:

— **restrict_applied_event_occurrence_assignment** (see 5.2.3.104).

5.2.2.1.14 applied_external_identification_assignment

An **applied_external_identification_assignment** is a type of **external_identification_assignment** that assigns an identifier from an external source to a particular piece of product data.

EXPRESS specification:

```
* )
ENTITY applied_external_identification_assignment
  SUBTYPE OF (external_identification_assignment);
  items : SET [1:?] OF external_identification_item;
WHERE
```

```

WR1: ( NOT ( SELF.role.name =
        'alternative document id and location' ) ) OR
        item_correlation ( SELF.items , ['DOCUMENT_FILE'] ) ;
WR2: ( NOT ( SELF.role.name = 'version' ) ) OR item_correlation
        ( SELF.items , ['EXTERNALLY_DEFINED_CLASS' ,
        'EXTERNALLY_DEFINED_GENERAL_PROPERTY'] ) ;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the identifier is assigned.

Formal propositions:

WR1: If the **role** has a **name** of 'alternative document id and location', only items of type **document_file** shall be in the set of **items**.

WR2: If the **role** has a **name** of 'version', only items of type **externally_defined_class**, or **externally_defined_general_property** shall be in the set of items.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_external_identification_assignment** entity:

— **identification_assignment_subtype_exclusiveness** (see 5.2.3.71).

5.2.2.1.15 **applied_group_assignment**

An **applied_group_assignment** is a type of **group_assignment** that assigns a **group** to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY applied_group_assignment
    SUBTYPE OF (group_assignment);
    items : SET [1:?] OF group_item;
WHERE
    WR1: applied_group_assignment_correlation(SELF);
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the **group** is assigned.

Formal propositions:

WR1: The **applied_group_assignment_correlation** function that correlates the role **names** of the **assigned_group** to elements of product data shall be satisfied.

ISO 10303-212:2001(E)

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_group_assignment_assignment** entity:

— `group_assignment_subtype_exclusiveness` (see 5.2.3.67).

5.2.2.1.16 **applied_identification_assignment**

An **applied_identification_assignment** is a type of **identification_assignment** that assigns an identifier to a particular piece of product data.

EXPRESS specification:

```
*)
ENTITY applied_identification_assignment
  SUBTYPE OF (identification_assignment);
  items : SET [1:?] OF identification_item;
WHERE
  WR1: applied_identification_assignment_correlation(SELF);
  WR2: SIZEOF(SELF.items) = 1;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the identifier is assigned.

Formal propositions:

WR1: The **applied_identification_assignment_correlation** function that correlates the role **names** of the **assigned_id** to elements of product data shall be satisfied.

WR2: Each instance of **applied_identification_assignment** shall contain exactly one element in its set of **items**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_identification_assignment** entity:

Ñ `identification_assignment_subtype_exclusiveness` (see 5.2.3.71);

Ñ `restrict_version_assignment_for_applied_identification_assignment`.

5.2.2.1.17 **applied_ineffectivity_assignment**

An **applied_ineffectivity_assignment** is a type of **effectivity_assignment** that specifies that the associated **effectivity_items** are set ineffective.

EXPRESS specification:

```
*)
ENTITY applied_ineffectivity_assignment
```

```

SUBTYPE OF (effectivity_assignment);
items : SET [1:?] OF effectivity_item;
WHERE
WR1: SIZEOF ( ['ELECTROTECHNICAL_DESIGN.'+ 'LOT_EFFECTIVITY' ,
'ELECTROTECHNICAL_DESIGN.'+ 'SERIAL_NUMBERED_EFFECTIVITY' ,
'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION_EFFECTIVITY']*
TYPEOF ( SELF.assigned_effectivity ) ) =0;
END_ENTITY;
(*)

```

Attribute definitions:

items: the set of **items** that are set ineffective by the **applied_ineffectivity_assignment**.

Formal propositions:

WR1: An **applied_ineffectivity_assignment** shall have an **assigned_effectivity** which is not of type **lot_effectivity**, **serial_numbered_effectivity**, or **product_definition_effectivity**.

5.2.2.1.18 applied_organization_assignment

An **applied_organization_assignment** is a type of **organization_assignment** that assigns an **organization** to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY applied_organization_assignment
SUBTYPE OF (organization_assignment);
items : SET [1:?] OF organization_item;
WHERE
WR1: applied_organization_assignment_correlation(SELF);
END_ENTITY;
(*)

```

Attribute definitions:

items: the set of items to which the **organization** is assigned.

Formal propositions:

WR1: The **applied_organization_assignment_correlation** function that correlates the role **names** of the **assigned_organization** to elements of product data shall be satisfied.

5.2.2.1.19 applied_organizational_project_assignment

An **applied_organizational_project_assignment** is a type of **organizational_project_assignment** that assigns an **organizational_project** to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY applied_organizational_project_assignment
SUBTYPE OF (organizational_project_assignment);

```

ISO 10303-212:2001(E)

```
items : SET [1:?] OF organizational_project_item;  
END_ENTITY;  
(*
```

Attribute definitions:

items: the set of items that are assigned to the **organizational_project**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_organizational_project_assignment** entity:

— **restrict_applied_organizational_project_assignment** (see 5.2.3.105).

5.2.2.1.20 **applied_person_and_organization_assignment**

An **applied_person_and_organization_assignment** is a type of **person_and_organization_assignment** that assigns a **person_and_organization** to a particular piece of product data.

EXPRESS specification:

```
*)  
ENTITY applied_person_and_organization_assignment  
  SUBTYPE OF (person_and_organization_assignment);  
  items : SET [1:?] OF person_and_organization_item;  
WHERE  
  WR1:  
  applied_person_and_organization_assignment_correlation(SELF);  
END_ENTITY;  
(*
```

Attribute definitions:

items: the set of items to which the **person_and_organization** is assigned.

Formal propositions:

WR1: The **applied_person_and_organization_assignment_correlation** function that correlates the role **names** of the **assigned_person_and_organization** to elements of product data shall be satisfied.

5.2.2.1.21 **applied_presented_item**

An **applied_presented_item** is a type of **presented_item** that defines the presentation of a particular piece of product data on a drawing.

NOTE In case the particular piece of product data is a **product_definition_formation**, the entity **draughting_presented_item** is used instead of **applied_presented_item**.

EXPRESS specification:

```
*)  
ENTITY applied_presented_item
```

```

SUBTYPE OF (presented_item);
items : SET [1:?] OF presented_item_select;
WHERE
  WR1:  SIZEOF(QUERY(pir <* USEDIN(SELF,
                        'ELECTROTECHNICAL_DESIGN.' +
                        'PRESENTED_ITEM_REPRESENTATION.ITEM')
|
                        NOT('ELECTROTECHNICAL_DESIGN.DRAWING_REVISION'
                            IN TYPEOF(pir.presentation))
                        )) = 0;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items that are presented on a drawing.

Formal propositions:

WR1: Each **presented_item_representation** associated to an **applied_presented_item** shall have as its **presentation** a **drawing_revision**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **applied_presented_item** entity:

— **presented_item_subtype_exclusiveness** (see 5.2.3.80).

5.2.2.1.22 applied_security_classification_assignment

An **applied_security_classification_assignment** is a type of **security_classification_assignment** that relates a **security_classification** to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY applied_security_classification_assignment
  SUBTYPE OF (security_classification_assignment);
  items : SET [1:?] OF security_classification_item;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the **security_classification** is applied.

5.2.2.1.23 applied_time_interval_assignment

An **applied_time_interval_assignment** is a type of **time_interval_assignment** that assigns a **time_interval** to a particular piece of product data.

EXPRESS specification:

ISO 10303-212:2001(E)

```
*)
ENTITY applied_time_interval_assignment
  SUBTYPE OF (time_interval_assignment);
  items : SET [1:?] OF time_interval_item;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the **time_interval** is assigned.

5.2.2.1.24 attribute_language_assignment

A **attribute_language_assignment** is a type of **attribute_classification_assignment**. It associates the specification of a language used for a string valued attribute to the entity instance that has this attribute. The attribute value is further classified as either being specified in the original language or as a translation thereof.

EXPRESS specification:

```
*)
ENTITY attribute_language_assignment
  SUBTYPE OF (attribute_classification_assignment);
  items : SET [1:?] OF attribute_language_item;

DERIVE
language : label := SELF\attribute_classification_assignment.
              assigned_class.name;

WHERE
  WR1:SELF\attribute_classification_assignment. role.name IN
      ['primary' , 'translated'];
  WR2:'ELECTROTECHNICAL_DESIGN.'+'LANGUAGE' IN TYPEOF (
      SELF\attribute_classification_assignment. assigned_class )
      ;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of objects to which the language classification is assigned.

language: The **language** specifies the **name** of the **assigned_class** that provides an identification for the language in which an attribute value is specified.

Formal propositions:

WR1: The language used to specify the string valued attributes in the set of **items** shall be marked either as the 'primary' language or as 'translated'.

WR2: The instance referenced as **assigned_class** shall be of type **language**.

5.2.2.1.25 camera_image_2d_with_scale

A **camera_image_2d_with_scale** is a **camera_image** with a derived scale. The scale is the ratio between the size of the viewport and the size of the view window of the **camera_model**.

NOTE 1 The viewport specifies the rectangular boundary of the view as it is depicted in the drawing sheet.

NOTE 2 The definition of this entity is identical to the definition in ISO 10303-201, ISO 10303-202.

EXPRESS specification:

```

*)
ENTITY camera_image_2d_with_scale
  SUBTYPE OF (camera_image);
DERIVE
  scale : positive_ratio_measure :=
    ((SELF\mapped_item.mapping_target\planar_extent.size_in_x)
  /
    (SELF\mapped_item.mapping_source.mapping_origin\
    camera_model_d2.view_window\planar_extent.size_in_x));
WHERE
  WR1: ('ELECTROTECHNICAL_DESIGN.CAMERA_MODEL_D2'
    IN TYPEOF(SELF\mapped_item.mapping_source.mapping_origin));
  WR2: aspect_ratio(SELF\mapped_item.mapping_target) =
    aspect_ratio(SELF\mapped_item.mapping_source.mapping_origin\
    camera_model_d2.view_window);
  WR3: SELF\mapped_item.mapping_source.mapping_origin\
    camera_model_d2.view_window_clipping;
END_ENTITY;
(*

```

Attribute definitions:

scale: the **positive_ratio_measure** derived from the rectangular size of the viewport and the rectangular size of the **view_window** of the **camera_model_d2**.

Formal propositions:

WR1: The source of the projection shall be a **camera_model_d2**.

WR2: The aspect ratio of the viewport shall equal the aspect ratio of the **view_window** of the **camera_model**.

WR3: The **view_window_clipping** attribute of the **camera_model_d2** shall be true.

Informal propositions:

IP1: The horizontal and vertical components of the viewport shall be parallel to the corresponding components of the **view_window** of the **camera_model**.

5.2.2.1.26 characterized_class

ISO 10303-212:2001(E)

A **characterized_class** is a type of **class** and **characterized_object** that represents classification information with associated characteristics.

NOTE See application object definition for `Classification_attribute` (see 4.2.47) for more information.

EXPRESS specification:

```
*)
ENTITY characterized_class
  SUBTYPE OF (characterized_object, class);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **signal** entity:

— `characterized_object_subtype_exclusiveness` (see 5.2.3.6).

5.2.2.1.27 class

A **class** is a type of **group** that specifies the category a thing or concept belongs to.

EXPRESS specification:

```
*)
ENTITY class
  SUBTYPE OF (group);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **class** entity:

— `group_subtype_exclusiveness` (see 5.2.3.69);

— `restrict_class_system_assignment_for_class` (see 5.2.3.108);

— `restrict_version_assignment_for_class` (see 5.2.3.136).

5.2.2.1.28 class_system

A **class_system** is a type of **group** that specifies the method used to classify an object.

EXPRESS specification:

```
*)
ENTITY class_system
  SUBTYPE OF (group);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **class_system** entity:

— **group_subtype_exclusiveness** (see 5.2.3.69).

5.2.2.1.29 class_usage_effectivity_context_assignment

A **class_usage_effectivity_context_assignment** is a type of **effectivity_context_assignment** that assigns an **applied_effectivity_assignment** specifying the **effectivity_items** that impact the design of a solution for an **effectivity_context_item**.

EXPRESS specification:

```

*)
ENTITY class_usage_effectivity_context_assignment
  SUBTYPE OF (effectivity_context_assignment);
  items : SET [1:?] OF class_usage_effectivity_context_item;
WHERE
  WR1:SELF.role.name = 'class usage influence' ;
  WR2: SIZEOF ( QUERY ( i <* SELF.items | NOT (
    'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION' IN TYPEOF ( i
  )
  ) ) ) =0;
  WR3: ( 'ELECTROTECHNICAL_DESIGN.'+ 'APPLIED_EFFECTIVITY_ASSIGNMENT'
  IN TYPEOF ( SELF.assigned_effectivity_assignment ) ) AND (
  SIZEOF ( TYPEOF ( SELF.assigned_effectivity_assignment.
  assigned_effectivity ) ) =1 ) AND (
  SELF.assigned_effectivity_assignment.
  assigned_effectivity.id = 'class usage' ) AND ( SIZEOF (
  QUERY ( i <* SELF.assigned_effectivity_assignment\
  applied_effectivity_assignment.items | NOT (
  'ELECTROTECHNICAL_DESIGN.'+
  'PRODUCT_CONCEPT_FEATURE_CATEGORY_USAGE' IN TYPEOF ( i ) )
  ) ) =0 ) ;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of **items** for which the **applied_effectivity_assignment** identifies a design impact.

Formal propositions:

WR1: The **class_usage_effectivity_context_assignment** shall have a **role** with a **name** of 'class usage influence'.

WR2: The **class_usage_effectivity_context_assignment** shall only have **product_definitions** in its set of **items** which reference as **frame_of_reference** a **product_definition_context** with a **name** of 'conceptual definition'.

WR3: The **class_usage_effectivity_context_assignment** shall reference an **applied_effectivity_assignment** with an **assigned_effectivity** which is not of an **effectivity** subtype and which has an **id**

ISO 10303-212:2001(E)

of 'class usage' and which has only **product_concept_feature_category_usage** objects in the set of **items**.

5.2.2.1.30 colour_representation_item

A **colour_representation_item** is a type of **descriptive_representation_item** that represents the colour of a specific item.

EXPRESS specification:

```
*)
ENTITY colour_representation_item
  SUBTYPE OF (descriptive_representation_item);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **colour_representation_item** entity:

— representation_item_subtype_exclusiveness (see 5.2.3.97).

5.2.2.1.31 configured_effectivity_assignment

A **configured_effectivity_assignment** is a type of **effectivity_assignment** that assigns configuration effectivity information to a particular piece of product data.

EXPRESS specification:

```
*)
ENTITY configured_effectivity_assignment
  SUBTYPE OF (effectivity_assignment);
  items : SET [1:?] OF configured_effectivity_item;
WHERE
WR1: ( SIZEOF ( ['ELECTROTECHNICAL_DESIGN.'+ 'EFFECTIVITY']* TYPEOF
(
  SELF.assigned_effectivity ) ) =1 ) AND (
  SELF.assigned_effectivity. id = 'configuration validity' )
;
WR2: SIZEOF ( SELF.items ) =1;
WR3: SIZEOF ( QUERY ( i <* SELF.items | NOT (
  'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION' IN TYPEOF ( i
)
) OR NOT ( i\product_definition. frame_of_reference.name IN
[ 'conceptual definition' , 'part occurrence' ,
'functional definition' , 'alternative definition' ] ) ) )
=0;
WR4:SELF.role. name IN ['design' , 'usage'];
WR5: ( SELF.role. name<>'design' ) OR ( SIZEOF ( QUERY ( i <*
SELF.items | ( 'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION'
IN TYPEOF ( i ) ) AND ( i\product_definition.
frame_of_reference.name = 'part occurrence' ) ) ) =0 ) ;
WR6: ( SELF.role. name<>'usage' ) OR ( SIZEOF ( QUERY ( i <*
```

```

SELF.items | ( 'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION'
IN TYPEOF ( i ) ) AND ( i\product_definition.
frame_of_reference.name = 'conceptual definition' ) ) =0
) ;
WR7:SELF.role.description IN ['exception' , 'inherited' ,
'local'];
WR8: SIZEOF ( QUERY ( x <* USEDIN ( SELF ,
'ELECTROTECHNICAL_DESIGN.'+'EFFECTIVITY_CONTEXT_ASSIGNMENT.'+
'ASSIGNED_EFFECTIVITY_ASSIGNMENT' ) |
'ELECTROTECHNICAL_DESIGN.'+
'CONFIGURED_EFFECTIVITY_CONTEXT_ASSIGNMENT' IN TYPEOF ( x )
) ) =1;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which configuration effectivity information is assigned.

Formal Propositions:

WR1: The **configured_effectivity_assignment** shall have an **assigned_effectivity** which is not of an **effectivity** subtype and which has an **id** of 'configuration validity'.

WR2: The **configured_effectivity_assignment** shall have exactly one item in its set of **items**.

WR3: The **configured_effectivity_assignment** shall only have **product_definitions** in its set of **items** which reference as **frame_of_reference** a **product_definition_context** with a **name** of 'conceptual definition', 'part occurrence', 'functional definition', or 'alternative definition'.

WR4: The **configured_effectivity_assignment** shall have as **role** an **object_role** with a **name** of 'de-sign' or 'usage'.

WR5: If the **configured_effectivity_assignment** has as **role** an **object_role** with a **name** of 'design', it may not have **product_definitions** in its set of **items** which reference as **frame_of_reference** a **product_definition_context** with a **name** of 'part occurrence'.

WR6: If the **configured_effectivity_assignment** has as **role** an **object_role** with a **name** of 'usage', it may not have **product_definitions** in its set of **items** which reference as **frame_of_reference** a **product_definition_context** with a **name** of 'conceptual definition', or 'functional definition'.

WR7: The **configured_effectivity_assignment** shall have as **role** an **object_role** with a **description** of 'exception', 'inherited', or 'local'.

WR8: The **configured_effectivity_assignment** shall be referenced as **assigned_effectivity_assignment** by exactly one **configured_effectivity_context_assignment**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **configured_effectivity_assignment** entity:

ISO 10303-212:2001(E)

- effectivity_assignment_subtype_exclusiveness (see 5.2.3.57);
- restrict_effectivity_usage (see 5.2.3.117).

5.2.2.1.32 configured_effectivity_context_assignment

A **configured_effectivity_context_assignment** is a type of **effectivity_context_assignment** that specifies the context for a **configured_effectivity_assignment**.

EXPRESS specification:

```
*)
ENTITY configured_effectivity_context_assignment
  SUBTYPE OF (effectivity_context_assignment);
  items : SET [1:?] OF configured_effectivity_context_item;
WHERE
  WR1: 'ELECTROTECHNICAL DESIGN.' + 'CONFIGURED_EFFECTIVITY_ASSIGNMENT'
      IN TYPEOF ( SELF.assigned_effectivity_assignment ) ;
  WR2: SIZEOF ( SELF.items ) =1;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items which provide the context for the **configured_effectivity_assignment**.

Formal propositions:

WR1: The **configured_effectivity_context_assignment** shall reference as **assigned_effectivity_assignment** a **configured_effectivity_assignment**.

WR2: The **configured_effectivity_context_assignment** shall have exactly one item in its set of **items**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **configured_effectivity_context_assignment** entity:

- effectivity_context_assignment_subtype_exclusiveness (see 5.2.3.58).

5.2.2.1.33 connecting_line_group

A **connecting_line_group** is a type of **group** that is the representation of a connection in a schematic diagram.

EXPRESS specification:

```
*)
ENTITY connecting_line_group
  SUBTYPE OF (group);
WHERE
  WR1: SIZEOF(USEDIN(SELF, 'ELECTROTECHNICAL DESIGN.' +
                    'GROUP_ASSIGNMENT.' +
```

```

'ASSIGNED_GROUP' ) ) = 1;
END_ENTITY;
(*

```

Formal propositions:

WR1: Each **connecting_line_group** shall be referenced by exactly one **group_assignment** that is of type **connecting_line_group_assignment** as the **assigned_group**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **connecting_line_group** entity:

— group_subtype_exclusiveness (see 5.2.3.69).

5.2.2.1.34 connecting_line_group_assignment

A **connecting_line_group_assignment** is a type of **group_assignment** that relates a **connecting_line_group** to the connection to be represented in a schematic diagram.

EXPRESS specification:

```

*)
ENTITY connecting_line_group_assignment
  SUBTYPE OF (group_assignment);
  item : connecting_line_item;
END_ENTITY;
(*

```

Attribute definitions:

item: the item to which the **connecting_line_group** is assigned.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **connecting_line_group_assignment** entity:

— group_assignment_subtype_exclusiveness (see 5.2.3.67).

5.2.2.1.35 connectivity_definition

A **connectivity_definition** is a type of **shape_aspect** that represents the fact that terminals are connected with the intention to allow the flow of information, energy or matter. A **connectivity_definition** may be aggregated into a group of other **connectivity_definitions** that is used to order, group and name a collection of connections or networks for some purpose.

NOTE See application object definitions for **Connectivity_definition** (see 4.2.61) and **Functional_connectivity_definition** (see 4.2.152) for more information.

EXPRESS specification:

```

*)

```

Formal propositions:

WR1: It is not known whether or not the **connectivity_definition** lies on the shape of the product.

WR2: The **connectivity_definition** shall be a **shape_aspect** of a **product_definition**.

WR3: The **product_definition** the **connectivity_definition** is a **shape_aspect** of shall have an associated **application_context_element** with a **name** of either 'functional definition' or 'part definition'.

WR4: For all **shape_aspect_relationships** with the **name** 'connectivity' the **connectivity_definition** participates in as the **relating_shape_aspect**, the **related_shape_aspects** shall be of type **terminal**. The **application_context_elements** associated to the **product_definition** each **terminal** in the role of the **related_shape_aspect** is a **shape_aspect** of shall have the same **name** which is one of either 'functional definition', 'functional occurrence', 'part definition', or 'part occurrence'.

WR5: For the same pair of a **connectivity_definition** and a **terminal** only one **shape_aspect_relationship** with the **name** 'connectivity' is allowed.

WR6: For the same pair of **connectivity_definitions** only one **shape_aspect_relationship** with the **name** 'decomposition' is allowed.

WR7: A **connectivity_definition** representing a connection bundle shall not participate in its own bundle membership definition.

WR8: Each hierarchically composed **connectivity_definition** shall not participate in its own definition.

WR9: Each instance of **connectivity_definition** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **connectivity_definition** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

Informal propositions:

IP1: A **connectivity_definition** representing representing a Connection (see 4.2.59) shall participate as the **relating_shape_aspect** in at least one **shape_aspect_relationship** with a **name** of 'connectivity' where the **related_shape_aspect** is of type **terminal**.

5.2.2.1.36 **derived_unit_variable**

A **derived_unit_variable** is a type of **derived_unit** and **variable_semantics** that represents the unit in an explicitly defined mathematical function.

EXPRESS specification:

```
*)
ENTITY derived_unit_variable
  SUBTYPE OF (derived_unit, variable_semantics);
INVERSE
  associated_variable_environment: environment FOR semantics;
END_ENTITY;
(*
```

Attribute definitions:

associated_variable_environment: the **environment** that specifies the representation for the **derived_unit**.

5.2.2.1.37 **document_designation_assignment**

A **document_designation_assignment** is a type of **item_designation_assignment** that specifies a reference designation which uniquely identifies the referenced **product_definition** representing external documentation or **drawing_revision** within its scope.

EXPRESS specification:

```
*)
ENTITY document_designation_assignment
```

ISO 10303-212:2001(E)

```
    SUBTYPE OF (item_designation_assignment);
WHERE
  WR1:  SIZEOF(QUERY(i <* SELF.items |
                    SIZEOF(TYPEOF(i) *
                              ['ELECTROTECHNICAL_DESIGN.' +
                               'DRAWING_REVISION',
                               'ELECTROTECHNICAL_DESIGN.' +
                               'DRAWING_SHEET_REVISION',
                               'ELECTROTECHNICAL_DESIGN.' +
                               'PRODUCT_DEFINITION']
                    ) = 0 )
        ) = 0;
  WR2:  SIZEOF(QUERY(despd <* SELF.items |
                    ('ELECTROTECHNICAL_DESIGN.PRODUCT_DEFINITION'
                     IN TYPEOF(despd))
                    AND
                    NOT(despd\product_definition.frame_of_reference.name
                        IN ['conceptual_definition',
                           'functional_occurrence',
                           'part_occurrence',
                           'system_definition']))
        ) = 0;
  WR3:  SIZEOF(TYPEOF(SELF) *
            ['ELECTROTECHNICAL_DESIGN.' +

             'ELECTROTECHNICAL_DESIGN.' +
             'SIGNAL_DESIGNATION_ASSIGNMENT',
             'ELECTROTECHNICAL_DESIGN.' +
             'TERMINAL_DESIGNATION_ASSIGNMENT']
        ) = 1;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each instance of **document_designation_assignment** shall contain in its set of **items** only an instance of either **drawing_revision**, **drawing_sheet_revision**, or **product_definition**.

WR2: If an instance of **document_designation_assignment** contains an instance of **product_definition** in its set of **items** this **product_definition** shall have an associated **application_context_element** with a **name** of either 'digital document definition', 'physical document definition', or 'physical model occurrence'.

WR3: Each instance of **document_designation_assignment** shall not be an instance of any other subtype of **item_designation_assignment**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **document_designation_assignment** entity:

— identification_assignment_subtype_exclusiveness (see 5.2.3.71).

5.2.2.1.38 document_file

A **document_file** is a type of **document** and **characterized_object** that characterizes files with properties, e.g. file size, creating system, etc.

EXPRESS specification:

```
*)
ENTITY document_file
  SUBTYPE OF (document, characterized_object);
WHERE
  WR1:SELF\characterized_object.name = '';
  WR2: NOT EXISTS ( SELF\characterized_object.description ) ;
  WR3: SIZEOF ( QUERY ( drt <* SELF\document.
    representation_types | drt.name IN ['digital' ,
    'physical'] ) ) =1;
END_ENTITY;
(*
```

Formal Propositions:

WR1: The name of the **characterized_object** shall not be used, use name of document.

WR2: The description of the **characterized_object** shall not be used, use description of document.

WR3: The document shall have exactly one **document_representation_type** with a **name** of either 'digital' or 'physical'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **document_file** entity:

— characterized_object_subtype_exclusiveness (see 5.2.3.6);

— restrict_properties_for_document_file;

— restrict_version_assignment_for_document_file (see 5.2.3.138).

5.2.2.1.39 document_product_equivalence

A **document_product_equivalence** is a type of **document_product_association** that specifies the equivalence of a **product**, **product_definition_formation**, or **product_definition** instance with a **document** instance.

EXPRESS specification:

```
*)
ENTITY document_product_equivalence
  SUBTYPE OF (document_product_association);
WHERE
  WR1:SELF.name = 'equivalence';
```

ISO 10303-212:2001(E)

```
WR2: NOT ( 'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT' IN TYPEOF (
  SELF.related_product ) ) OR ( ( SELF.relying_document.
  kind.product_data_type =
  'configuration controlled document' ) AND ( SIZEOF ( QUERY
  ( prpc <* USEDIN ( SELF.related_product ,
  'ELECTROTECHNICAL_DESIGN.'+'PRODUCT_RELATED_PRODUCT_CATEGORY.'+
  'PRODUCTS' ) | prpc. name ='document' ) ) =1 ) ) ;
WR3: NOT ( 'ELECTROTECHNICAL_DESIGN.'+
'PRODUCT_DEFINITION_FORMATION'
  IN TYPEOF ( SELF.related_product ) ) OR ( (
  SELF.relying_document. kind.product_data_type =
  'configuration controlled document version' ) AND ( SIZEOF
  ( QUERY ( prpc <* USEDIN (
  SELF.related_product\product_definition_formation.
  of_product ,
  'ELECTROTECHNICAL_DESIGN.PRODUCT_RELATED_PRODUCT_CATEGORY.PRODUCTS'
  ) | prpc. name ='document' ) ) =1 ) ) ;
WR4: NOT ( 'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION' IN
  TYPEOF
  ( SELF.related_product ) ) OR ( ( SELF.relying_document.
  kind.product_data_type =
  'configuration controlled document definition' ) AND (
  SIZEOF ( QUERY ( prpc <* USEDIN (
  SELF.related_product\product_definition.
  formation.of_product ,
  'ELECTROTECHNICAL_DESIGN.PRODUCT_RELATED_PRODUCT_CATEGORY.PRODUCTS'
  ) | prpc. name ='document' ) ) =1 ) ) ;
END_ENTITY;
(*
```

Formal propositions:

WR1: The **name** of the **document_product_association** shall be 'equivalence'.

WR2: If the **related_product** is a **product** then the **relating_document** shall have a **document_type** with **product_data_type** 'configuration controlled document' and there is exactly one **product_re-lated_product_category** with a **name** of 'document' for the **product**.

WR3: If the **related_product** is a **product_definition_formation** then the **relating_document** shall have a **document_type** with **product_data_type** 'configuration controlled document version' and there is exactly one **product_related_product_category** with a **name** of 'document' for the **product** of the related **product_definition_formation**.

WR4: If the **related_product** is a **product_definition** then the **relating_document** shall have a **document_type** with **product_data_type** 'configuration controlled document definition' and there is exactly one **product_related_product_category** with a **name** of 'document' for the **product** of the related **product_definition**.

5.2.2.1.40 draughting_group_elements_assignment

A **draughting_group_elements_assignment** is an assignment of one or more **annotation_occurrences** to a **group**.

EXPRESS specification:

```
*)
ENTITY draughting_group_elements_assignment
  SUBTYPE OF (group_assignment);
  items : SET [1:?] OF draughting_group_element;
END_ENTITY;
(*
```

Attribute definitions:

items: the **draughting_group_elements** that are assigned to a **group**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **draughting_group_elements_assignment** entity:

— group_assignment_subtype_exclusiveness (see 5.2.3.67).

5.2.2.1.41 draughting_model

A **draughting_model** is a type of **representation** that represents of the shape of a product for the purpose of draughting. A **draughting_model** may contain **mapped_items** that are the mappings of **shape_representations**. A **mapped_item** that is the mapping of a **shape_representation** specifies an explicit **representation** of the shape of a product that is to be presented in the drawing. The **draughting_model** may contain **styled_items**. These **styled_items** specify the style for a **mapped_item** that is the mapping of a **shape_representation**, and provide the **curve_style** to be used in presenting the **shape_representation** in the drawing. The **draughting_model** may contain **annotation_occurrences**. These **annotation_occurrences** specify annotation that is placed in the same coordinate system as the **shape_representation**, and is projected into a view when the **draughting_model** is presented in a drawing.

EXPRESS specification:

```
*)
ENTITY draughting_model
  SUBTYPE OF (representation);
  UNIQUE
  UR1: SELF\representation.name;
  WHERE
  WR1:  SIZEOF(QUERY(it <* SELF.items |

                                                                'CURVE_STYLE'
                                                                IN TYPEOF(psa)) )
                                                                ) = 1 ) )
                                ) = 1 )) )
) = 0;
END_ENTITY;
(*
```

Formal Propositions:

UR1: The **name** of a **draughting_model** shall be unique.

WR1: Each item of a **draughting_model** shall be a **mapped_item**, **styled_item**, or **axis2_placement**.

WR2: If there is a **mapped_item** in the **draughting_model**, the source of the **mapped_item** shall be a **shape_representation**.

WR3: If a **mapped_item** is styled, the source of the **mapped_item** shall be a **shape_representation** and the style applied to the **mapped_item** shall be a **curve_style**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **draughting_model** entity:

— **draughting_model_annotation_layers** (see 5.2.3.50).

5.2.2.1.42 draughting_pre_defined_colour

A **draughting_pre_defined_colour** is a **pre_defined_colour** that is identified by name.

NOTE 1 See application object definition for Predefined_colour (see 4.2.251) for more information.

NOTE 2 The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```

*)
ENTITY draughting_pre_defined_colour
  SUBTYPE OF (pre_defined_colour);
WHERE
  WR1: SELF.name IN
    ['black', 'red', 'green', 'blue',
     'yellow', 'magenta', 'cyan', 'white'];
END_ENTITY;
(*

```

Formal propositions:

WR1: The **name** of the **draughting_pre_defined_colour** shall be 'black', 'red', 'green', 'blue', 'yellow', 'magenta', 'cyan', or 'white'.

5.2.2.1.43 draughting_pre_defined_curve_font

A **draughting_pre_defined_curve_font** is a **pre_defined_curve_font** that is identified by name.

NOTE 1 See application object definition for Predefined_line_font (see 4.2.254) for more information.

NOTE 2 The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```

*)
ENTITY draughting_pre_defined_curve_font
  SUBTYPE OF (pre_defined_curve_font);
WHERE
  WR1: SELF.name IN
    ['continuous', 'chain', 'chain double dash', 'dashed',
     'dotted'];
END_ENTITY;
(*

```

Formal propositions:

WR1: The **name** of the **draughting_pre_defined_curve_font** shall be 'continuous', 'chain', 'chain double dash', 'dashed', or 'dotted'.

5.2.2.1.44 draughting_pre_defined_text_font

A **draughting_pre_defined_text_font** is a **pre_defined_text_font** that is identified by name. The definition of the appearance of each **draughting_pre_defined_text_font** is given in ISO 3098-1.

NOTE The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
ENTITY draughting_pre_defined_text_font
  SUBTYPE OF (pre_defined_text_font);
WHERE
  WR1: SELF.name IN
    ['ISO 3098-1 font A', 'ISO 3098-1 font B'];
END_ENTITY;
(*
```

Formal propositions:

WR1: The **name** of the **draughting_pre_defined_text_font** shall be 'ISO 3098-1 font A' or 'ISO 3098-1 font B'.

5.2.2.1.45 draughting_presented_item

A **draughting_presented_item** defines the presentation by a drawing of a **product_definition_formation**.

NOTE The definition of this entity is identical to the definition in ISO 10303-505.

EXPRESS specification:

```
*)
ENTITY draughting_presented_item
  SUBTYPE OF (presented_item);
  items : SET [1:?] OF draughting_presented_item_select;
WHERE
  WR1: SIZEOF(QUERY(pir <* USEDIN(SELF,
    'ELECTROTECHNICAL_DESIGN.' +
    'PRESENTED_ITEM_REPRESENTATION.ITEM') |
    NOT('ELECTROTECHNICAL_DESIGN.DRAWING_REVISION'
    IN TYPEOF(pir.presentation))
  )) = 0;
END_ENTITY;
(*
```

Attribute definitions:

items: the set of **product_definition_formation**s that are presented.

Formal propositions:

WR1: Each **presented_item_representation** associated to a **draughting_presented_item** shall have as its **presentation** a **drawing_revision**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **draughting_presented_item** entity:

— **presented_item_subtype_exclusiveness** (see 5.2.3.80).

5.2.2.1.46 draughting_specification_reference

A **draughting_specification_reference** is the designation of an external draughting specification for a drawing revision.

NOTE The definition of this entity is identical to the definition in ISO 10303-505.

EXPRESS specification:

```
*)
ENTITY draughting_specification_reference
  SUBTYPE OF (document_reference);
  specified_items : SET [1:?] OF specified_item;
WHERE
  WR1: (SELF.assigned_document.kind.product_data_type =
    'draughting_specification');
END_ENTITY;
(*
```

Attribute definitions:

specified_items: the set of **drawing_revisions** to which a draughting specification is applied.

Formal propositions:

WR1: Each **document** assigned shall be a draughting specification.

5.2.2.1.47 drawing_sheet_layout

A **drawing_sheet_layout** is a symbol that presents the layout or format for a drawing sheet.

NOTE The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
ENTITY drawing_sheet_layout
  SUBTYPE OF (draughting_symbol_representation);
END_ENTITY;
(*
```

5.2.2.1.48 equipment_marking

An **equipment_marking** is a type of **shape_aspect** that specifies a mark applied to a piece of equipment. The mark is used to give additional information about that piece of equipment.

EXPRESS specification:

```

*)
ENTITY equipment_marking
  SUBTYPE OF (shape_aspect);
WHERE
  WR1:  SIZEOF(QUERY(pd <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.' +
    'PROPERTY_DEFINITION.' +
    'DEFINITION') |
    pd.name = 'information content')

  WR2:  SIZEOF(QUERY(pd <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.' +
    'PROPERTY_DEFINITION.' +
    'DEFINITION') |
    SIZEOF(QUERY(pdr <*
      USEDIN(pdr,
        'ELECTROTECHNICAL_DESIGN.' +
        'PROPERTY_DEFINITION_REPRESENTATION.'
+
        'DEFINITION') |
        pdr.used_representation.name
        IN ['linear pattern location',
          'marking location'] )
      ) = 1 )
    ) < 2;
  WR3:  SIZEOF(USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.' +
    'APPLIED_CLASSIFICATION_ASSIGNMENT.' +
    'ITEMS')
    ) = 1;
  WR4:  SIZEOF(QUERY(aca <* USEDIN(SELF,
    'ELECTROTECHNICAL_DESIGN.' +
    'APPLIED_CLASSIFICATION_ASSIGNMENT.' +
    'ITEMS') |
    aca.role.name = 'class system membership')
    ) = 1;
END_ENTITY;
(*

```

Formal propositions:

WR1: Each instance of **equipment_marking** shall be referenced by exactly one instance of **property_definition** that has a **name** of ‘information content’.

WR2: Each instance of **equipment_marking** shall be referenced by at most one instance of **property_definition** that is represented by exactly one instance of **representation** that has a **name** of ‘linear pattern location’ or ‘marking location’.

WR3: Each instance of **equipment_marking** shall be referenced by exactly one instance of **applied_classification_assignment**.

WR4: Each instance of **equipment_marking** shall be referenced by exactly one instance of **applied_classification_assignment** that has an associated **classification_role** with a **name** of 'class system membership'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **equipment_marking** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.49 **exclusive_product_concept_feature_category**

An **exclusive_product_concept_feature_category** is a type of **product_concept_feature_category** in which the contained **product_concept_feature** instances describe mutually exclusive characteristics of a product.

NOTE See application object definition for **Specification_category** (see 4.2.324) for more information.

EXPRESS specification:

```
*)
ENTITY exclusive_product_concept_feature_category
  SUBTYPE OF (product_concept_feature_category);
END_ENTITY;
(*
```

5.2.2.1.50 **expression_conversion_based_unit**

An **expression_conversion_based_unit** is a type of **context_dependent_unit** and **variable_semantics** that represents the unit in an explicitly defined mathematical function.

EXPRESS specification:

```
*)
ENTITY expression_conversion_based_unit
  SUBTYPE OF (context_dependent_unit, variable_semantics);
INVERSE
  associated_variable_environment: environment FOR semantics;
END_ENTITY;
(*
```

Attribute definitions:

associated_variable_environment: the **environment** that specifies the representation for the derived unit.

5.2.2.1.51 **externally_defined_class**

ISO 10303-212:2001(E)

An **externally_defined_class** is a type of **externally_defined_item** and **class** that represents classification information whose identification and definition is defined externally, i.e., not within this part of ISO 10303.

EXPRESS specification:

```
*)
ENTITY externally_defined_class
  SUBTYPE OF (class, externally_defined_item);
WHERE
  WR1:  SIZEOF(QUERY(a <* USEDIN(SELF,

Formal propositions:

WR1: Each instance of **externally_defined_class** shall be referenced by exactly one instance of **applied_organization_assignment** that has an associated **organization_role** with a **name** of 'library supplier'.

WR2: Each instance of **externally_defined_class** shall be referenced by exactly one instance of **applied_external_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

WR3: For each instance of **externally_defined_class**, the referenced **external_source** shall be shared with the **source** of the referencing **applied_external_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

WR4: Each instance of **externally_defined_class** shall not be referenced by instances of **applied_identification_assignment** that have an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **externally_defined_class** entity:

— **externally_defined_item_subtype_exclusiveness** (see 5.2.3.63).

5.2.2.1.52 externally_defined_general_property

An **externally_defined_general_property** is a type of **externally_defined_item** and **general_property** that represents general property definition information which is defined externally, i.e., not within this part of ISO 10303.

EXPRESS specification:

```
* )
ENTITY externally_defined_general_property
  SUBTYPE OF (general_property, externally_defined_item);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **externally_defined_general_property** entity:

Ñ **externally_defined_item_subtype_exclusiveness** (see 5.2.3.63);

Ñ **property_reference_requires_name_scope** (see 5.2.3.92);

Ñ **property_reference_requires_version** (see 5.2.3.93).

5.2.2.1.53 free_segment

A **free_segment** is a type of **shape_aspect** that specifies a portion of a routing path that does not have a well-defined course.

EXPRESS specification:

```
* )
ENTITY free_segment
  SUBTYPE OF (installation_segment);
WHERE
  WR1: SIZEOF(QUERY(sar <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+

```

ISO 10303-212:2001(E)

```
'SHAPE_ASPECT_RELATIONSHIP.' +
                                'RELATING_SHAPE_ASPECT') |
    (sar.name = 'segment termination')
    AND
    ('ELECTROTECHNICAL_DESIGN.INSTALLATION_NODE'
     IN TYPEOF(sar.related_shape_aspect))
    )) > 0;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each **free_segment** shall participate as the **relating_shape_aspect** in at least one **shape_aspect_relationship** with the **name** 'segment termination' where the **related_shape_aspect** is of type **installation_node**.

5.2.2.1.54 inclusion_product_concept_feature

An **inclusion_product_concept_feature** is a type of **conditional_concept_feature** that is the representation of the statement that the application of a **product_concept_feature** or of a **conditional_concept_feature** implies the inclusion of an additional **product_concept_feature** or **conditional_concept_feature**. See Specification_inclusion (see 4.2.327) 4.2.x for more information.

EXPRESS specification:

```
*)
ENTITY inclusion_product_concept_feature
    SUBTYPE OF (conditional_concept_feature);
WHERE
    WR1: NOT ( 'ELECTROTECHNICAL_DESIGN.'+
              'PACKAGE_PRODUCT_CONCEPT_FEATURE' IN TYPEOF ( SELF ) ) ;
    WR2: SIZEOF ( QUERY ( cfr <* USEDIN ( SELF ,
              'ELECTROTECHNICAL_DESIGN.CONCEPT_FEATURE_RELATIONSHIP.'+
              'RELATING_PRODUCT_CONCEPT_FEATURE'
              ) | 'ELECTROTECHNICAL_DESIGN.'+
              'CONCEPT_FEATURE_RELATIONSHIP_WITH_CONDITION' IN TYPEOF (
              cfr ) ) ) + SIZEOF ( QUERY ( cfr <* USEDIN ( SELF ,
              'ELECTROTECHNICAL_DESIGN.CONCEPT_FEATURE_RELATIONSHIP.'+
              'RELATED_PRODUCT_CONCEPT_FEATURE'
              ) | 'ELECTROTECHNICAL_DESIGN.'+
              'CONCEPT_FEATURE_RELATIONSHIP_WITH_CONDITION' IN TYPEOF (
              cfr ) ) ) ) =0;
    WR3: SELF.condition. conditional_operator.name = 'implication';
END_ENTITY;
(*
```

Formal propositions:

WR1: An **inclusion_product_concept_feature** shall not be of type **package_product_concept_feature**.

WR2: An **inclusion_product_concept_feature** shall not be referenced as **relating_product_concept_feature** nor as **related_product_concept_feature** by **concept_feature_relationship_with_condition** instances.

WR3: An **inclusion_product_concept_feature** shall reference as **condition** a **concept_feature_relationship_with_condition** which references a **concept_feature_operator** with a **name** of 'implication'.

5.2.2.1.55 installation_location

An **installation_location** is a type of **shape_aspect** that specifies a region in space. In addition, it may be used to specify the physical or symbolic position of a piece of equipment.

NOTE See application object definition for Location (see 4.2.192) for more information.

EXPRESS specification:

```

*)
ENTITY installation_location
  SUBTYPE OF (shape_aspect);
WHERE
  WR1:  SIZEOF(TYPEOF(SELF) *
        ['ELECTROTECHNICAL_DESIGN.PRODUCT_DEFINITION',
        'ELECTROTECHNICAL_DESIGN.SPECIFIED_HIGHER_USAGE_OCCURRENCE']
        ) = 1;
  WR2:
SELF.of_shape.definition\product_definition.frame_of_reference.name
  IN ['conceptual definition',
      'functional definition',
      'functional occurrence',
      'part definition',

        i.role.name = 'version')
        ) < 2;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each instance of **installation_location** shall be a **shape_aspect** of either a **product_definition** or a **specified_higher_usage_occurrence**.

WR2: For each instance of **installation_location** that is a **shape_aspect** of a **product_definition**, this **product_definition** shall have an associated **application_context_element** with a **name** of either 'conceptual definition', 'functional definition', 'functional occurrence', 'part definition', 'part occurrence', 'physical occurrence', or 'system definition'.

WR3: For each instance of **installation_location** that is a **shape_aspect** of a **specified_higher_usage_occurrence**, this **specified_higher_usage_occurrence** shall either reference as the **relating_product_definition** a **product_definition** that has an associated **application_context_element** with a **name** of 'functional definition' and as the **related_product_definition** a **product_definition** that has an associated **application_context_element** with a **name** of 'functional occurrence' or it shall reference as the **relating_product_definition** a **product_definition** that has an associated **application_context_element** with a **name** of 'part definition' and as the **related_product_definition** a **product_definition** that has an associated

application_context_element with a **name** of ‘part occurrence’. The **related_product_definition** shall have a **name** of ‘single instance’.

WR4: Each instance of **installation_location** shall be referenced only by those instances of **item_designation_assignment** that are not instances of **document_designation_assignment**, **signal_designation_assignment**, or **terminal_designation_assignment**.

WR5: Each instance of **installation_location** shall be referenced by exactly one instance of **object_reference_designation_assignment** that has an associated **identification_role** with a **description** of ‘primary’.

WR6: Each instance of **installation_location** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of ‘version’.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **installation_location** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.56 installation_node

An **installation_node** is a type of **shape_aspect** that specifies a point in space that is of interest from the viewpoint of routing cables or arranging equipment.

NOTE See application object definition for Node (see 4.2.208) for more information.

EXPRESS specification:

```
*)
ENTITY installation_node
  SUBTYPE OF (shape_aspect);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **installation_node** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.57 installation_route

An **installation_route** is a type of **shape_aspect** that specifies a possible path for the laying of products.

NOTE See application object definition for Route (see 4.2.290) for more information.

EXPRESS specification:

```
*)
```

ISO 10303-212:2001(E)

```
ENTITY installation_route
  SUBTYPE OF (shape_aspect);
WHERE
  WR1:  SIZEOF(QUERY(i <* USEDIN(SELF,
                                'ELECTROTECHNICAL_DESIGN.' +
                                'APPLIED_IDENTIFICATION_ASSIGNMENT.' +
                                'ITEMS') |

            ) < 2;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each instance of **installation_route** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **installation_route** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.58 installation_section

An **installation_section** is a type of **shape_aspect** that represents the segment of a path. The segment is terminated by exactly two **installation_nodes**.

NOTE See application object definition for Section (see 4.2.296) for more information.

EXPRESS specification:

```
*)
ENTITY installation_section
  SUBTYPE OF (shape_aspect);
WHERE
  WR1:  SIZEOF(QUERY(i <* USEDIN(SELF,
                                'ELECTROTECHNICAL_DESIGN.' +

                                'ITEMS') |
                                i.role.name = 'version')
            ) < 2;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each instance of **installation_section** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **installation_section** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.59 installation_section_end

An **installation_section_end** is a type of **shape_aspect** that represents the extremity of the associated **installation_section**.

NOTE See application object definition for **Section_end** (see 4.2.297) for more information.

EXPRESS specification:

```

*)
ENTITY installation_section_end
  SUBTYPE OF (shape_aspect);
WHERE
  WR1:  SIZEOF(QUERY(sar <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+
'SHAPE_ASPECT_RELATIONSHIP.' +
                                'RELATING_SHAPE_ASPECT') |
        (sar.name = 'section end')
        AND
        ('ELECTROTECHNICAL_DESIGN.INSTALLATION_SECTION'
         IN TYPEOF(sar.related_shape_aspect))
        )) = 1;
  WR2:  SIZEOF(QUERY(sar <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+
'SHAPE_ASPECT_RELATIONSHIP.' +

         IN TYPEOF(sar.related_shape_aspect))
        )) < 2;
END_ENTITY;
(*

```

Formal propositions:

WR1: Each **installation_section_end** shall participate as the **relating_shape_aspect** in exactly one **shape_aspect_relationship** with a **name** of 'section end' where the **related_shape_aspect** is of type **installation_section**.

WR2: Each **installation_section_end** shall participate as the **relating_shape_aspect** in at most one **shape_aspect_relationship** with the **name** 'section end residence' where the **related_shape_aspect** is of type **installation_node**.

Associated global rules:

ISO 10303-212:2001(E)

The following global rules defined in this part of ISO 10303 apply to the **installation_section_end** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.60 installation_section_interface

An **installation_section_interface** is a type of **shape_aspect** that represents the zone where **installation_sections** are connected at their ends in some way to each other.

NOTE See application object definition for **Section_interface** (see 4.2.298) for more information.

EXPRESS specification:

```
*)
ENTITY installation_section_interface
  SUBTYPE OF (shape_aspect);
WHERE
  WR1: SIZEOF(QUERY(sar <* USEDIN(SELf, 'ELECTROTECHNICAL_DESIGN.' +

    'APPLIED_IDENTIFICATION_ASSIGNMENT.' +
    'ITEMS') |
    i.role.name = 'version')
  ) < 2;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each **installation_section_interface** shall participate as the **relating_shape_aspect** in at least one **shape_aspect_relationship** with the name 'section end joint' where the **related_shape_aspect** is of type **installation_section_end**.

WR2: Each **installation_section_interface** shall participate as the **relating_shape_aspect** in at most one **shape_aspect_relationship** with the **name** 'section interface residence' where the **related_shape_aspect** is of type **installation_node**.

WR3: Each instance of **installation_section_interface** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **installation_section_interface** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.61 installation_segment

An **installation_segment** is a type of **shape_aspect** that specifies a portion of a routing path.

EXPRESS specification:

```
*)
ENTITY installation_segment
  ABSTRACT SUPERTYPE
  SUBTYPE OF (shape_aspect);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **installation_segment** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.62 interface

An **interface** is a type of **shape_aspect** that specifies an aggregation of those terminals that characterize the use or the intended purpose of a functional or physical element.

NOTE See application object definitions for **Function_interface** (see 4.2.147) and **Interface** (see 4.2.170) for more information.

EXPRESS specification:

```
*)
ENTITY interface
  SUBTYPE OF (shape_aspect);
WHERE
  WR1: 'ELECTROTECHNICAL_DESIGN.PRODUCT_DEFINITION' IN
TYPEOF(SELF\shape_aspect.of_shape\property_definition.definition);
  WR2: SELF\shape_aspect.of_shape\
  property_definition.definition.frame_of_reference\
```

ISO 10303-212:2001(E)

```
        application_context_element.name
        IN ['functional definition',
            'part definition'];
WR3:   SIZEOF(QUERY(sar <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+
'SHAPE_ASPECT_RELATIONSHIP.' +
                                'RELATING_SHAPE_ASPECT') |
        (sar.name = 'external access')
        AND
        ('ELECTROTECHNICAL_DESIGN.TERMINAL' IN
         TYPEOF(sar.related_shape_aspect )))
        ) > 0;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each **interface** shall be a **shape_aspect** of a **product_definition**.

WR2: The **product_definition** the **interface** is a **shape_aspect** of shall have an associated **application_context_element** with a **name** of 'functional definition' or 'part definition'.

WR3: Each **interface** shall participate as the **relating_shape_aspect** in at least one **shape_aspect_relationship** with the **name** 'external access' where the **related_shape_aspect** is of type **terminal**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **interface** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.1.63 item_designation_assignment

An **item_designation_assignment** is a type of **identification_assignment** that specifies an identifier used to name the referenced physical or abstract object uniquely within its scope.

EXPRESS specification:

```
*)
ENTITY item_designation_assignment
  SUBTYPE OF (identification_assignment);
  items : SET [1:?] OF item_designation_item;
WHERE
  WR1:   SIZEOF(SELF.items) = 1;
  WR2:   SELF\identification_assignment.role.description
         IN ['alias', 'primary'];
  WR3:   NOT(SELF\identification_assignment.role.name
            IN ['alias', 'id', 'version']);
  WR4:   SIZEOF(QUERY(aca <* USEDIN(SELF,
                                'ELECTROTECHNICAL_DESIGN.' +
'APPLIED_CLASSIFICATION_ASSIGNMENT.' +
```

```

                'ITEMS') |
                'ELECTROTECHNICAL_DESIGN.CLASS_SYSTEM'
                IN TYPEOF(aca.assigned_class) )
        ) < 2;
WR5:   SIZEOF(QUERY(aoa <* USEDIN(SELf,
                'ELECTROTECHNICAL_DESIGN.' +

                i.role.name = 'version')
        ) < 2;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the item designation is assigned.

Formal propositions:

WR1: Each instance of **item_designation_assignment** shall contain in its set of **items** exactly one item.

WR2: Each instance of **item_designation_assignment** shall have an associated **identification_role** with a **description** of either 'alias' or 'primary'.

WR3: Each instance of **item_designation_assignment** shall have an associated **identification_role** where the **name** is not one of either 'alias', 'id', or 'version'.

WR4: Each instance of **item_designation_assignment** shall be used in the set of **items** of at most one **applied_classification_assignment** where the **assigned_class** is of type **class_system**.

WR5: Each instance of **item_designation_assignment** shall be used in the set of **items** of at most one **applied_organization_assignment** that has an associated **organization_role** with a **name** of 'item designation scope'.

WR6: Each instance of **item_designation_assignment** shall be used in the set of **items** of at most one **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **item_designation_assignment** entity:

— **identification_assignment_subtype_exclusiveness** (see 5.2.3.71).

5.2.2.1.64 known_source

A **known_source** is a type of **external_source** and of **pre_defined_item** that provides a mechanism to refer to an entry in an external library that is compliant to either IEC 61360 or ISO 13584.

NOTE See application object definition for **External_library_reference** (see 4.2.132) for more information.

EXPRESS specification:

```
*)
ENTITY known_source
  SUBTYPE OF (external_source, pre_defined_item);
END_ENTITY;
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **item_designation_assignment** entity:

— **known_source_constraint** (see 5.2.3.72).

5.2.2.1.65 language

A **language** is a type of **group** that is a specification of the language in which an information is given. The group shall specify in its **name** a language code according to ISO 639-2, and, if present, in its **description** a country code according to ISO 3166-1. See ARM definition for **Multi_language_note** (see 4.2.204) for more information.

EXPRESS specification:

```
*)
ENTITY language
  SUBTYPE OF (group);
WHERE
  WR1: ( SIZEOF ( QUERY ( ca <* USEDIN ( SELF ,
    'ELECTROTECHNICAL_DESIGN.' +
    'CLASSIFICATION_ASSIGNMENT.' + 'ASSIGNED_CLASS'

  ) | 'ELECTROTECHNICAL_DESIGN.' + 'ATTRIBUTE_LANGUAGE_ASSIGNMENT'
  IN
    TYPEOF ( aca ) ) ) > 0 ) ;
END_ENTITY;
(*
```

Formal propositions:

WR1: An instance of type language shall be referenced only by either the attribute **assigned_class** of a **classification_assignment** that is also a **language_assignment**, or by the attribute **assigned_class** of a **attribute_classification_assignment** that is also a **attribute_language_assignment**.

Informal propositions:

IP1: The **name** shall specify a language code according to ISO 639-2.

IP2: If present, the **description** shall specify a country code according to ISO 3166-1.

5.2.2.1.66 language_assignment

An **language_assignment** is a type of **classification_assignment** that assigns a language to a particular piece of product data.

EXPRESS specification:

```

*)
ENTITY language_assignment
  SUBTYPE OF (classification_assignment);
  items : SET [1:?] OF language_item;
WHERE
  WR1:'ELECTROTECHNICAL_DESIGN.'+ 'LANGUAGE' IN TYPEOF (
    SELF.assigned_class ) ;
  WR2:SELF.role.name='language';
  WR3: SIZEOF ( SELF.items ) = SIZEOF ( QUERY ( i <* SELF.items |
    ( 'ELECTROTECHNICAL_DESIGN.'+ 'REPRESENTATION' IN TYPEOF ( i )
  )
    AND ( i\representation.name = 'document content' ) ) ) ;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items to which the language is assigned.

Formal propositions:

WR1: The instance referenced as **assigned_class** shall be of type language.

WR2: The **name** of the **classification_role** referenced as **role** shall be 'language'.

WR3: The **representations** in the set of items shall be of **name** 'document content'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **language_assignment** entity:

— **classification_assignment_subtype_exclusiveness** (see 5.2.3.8).

5.2.2.1.67 multi_language_attribute_assignment

The **multi_language_attribute_assignment** is a type of **attribute_value_assignment**. It specifies an alternative value for the string valued attribute of an existing entity and the name of that attribute.

EXPRESS specification:

```

*)
ENTITY multi_language_attribute_assignment
  SUBTYPE OF (attribute_value_assignment);
  items : SET [1:?] OF multi_language_attribute_item;
DERIVE
language : label := get_multi_language(SELF);
WHERE
  WR1:SELF\attribute_value_assignment. role.name =
    'alternate language' ;
  WR2: ( SIZEOF ( USEDIN ( SELF ,
    'ELECTROTECHNICAL_DESIGN.ATTRIBUTE_LANGUAGE_ASSIGNMENT.ITEMS' )
)
  =1 ) AND ( SIZEOF ( QUERY ( ala <* USEDIN ( SELF ,
    'ELECTROTECHNICAL_DESIGN.'+'ATTRIBUTE_LANGUAGE_ASSIGNMENT.'+
    'ITEMS' ) | ala. attribute_name ='attribute_value' ) ) =1 )
  ;
END_ENTITY;
(*

```

Attribute definitions:

items: the set of items for which an alternative string value is specified.

language: The **language** specifies the **attribute_language_assignment** that refers as **items** to this object and provides the information concerning the language, in which an attribute value is specified.

Formal propositions:

WR1: The **attribute_value_role** specified by the **multi_language_attribute_assignment** shall have a **name** of 'alternate language'.

WR2: The **multi_language_attribute_assignment** shall be used exactly one time in role of **items** by an **attribute_language_assignment**. This **attribute_language_assignment** shall have a **attribute_name** of 'attribute_value'.

Informal propositions:

IP1: The **attribute_name** shall be the name of the attribute for which an alternative value is specified.

5.2.2.1.68 named_unit_variable

A **named_unit_variable** is a type of **named_unit** and **variable_semantics** that represents the unit in an explicitly defined mathematical function.

EXPRESS specification:

```

*)
ENTITY named_unit_variable
  SUBTYPE OF (named_unit, variable_semantics);
INVERSE
  associated_variable_environment: environment FOR semantics;
END_ENTITY;
(*

```

Attribute definitions:

associated_variable_environment: the **environment** that specifies the representation for the derived unit.

5.2.2.1.69 note_representation

A **note_representation** is a type of **representation** that specifies human-interpretable information that gives further details on a specific thing of interest.

NOTE See application object definitions for **Generic_note** (see 4.2.159), **Note** (see 4.2.210), and **Set_of_notes** (see 4.2.305) for more information.

EXPRESS specification:

```

*)
ENTITY note_representation
  SUBTYPE OF (representation);
WHERE
  WR1:  SIZEOF(SELF.items) = 1;
  WR2:  'ELECTROTECHNICAL_DESIGN.DESCRPTIVE_REPRESENTATION_ITEM'
        IN TYPEOF(SELF.items[1]);
  WR3:  SIZEOF(USEDIN(SELF.items[1], 'ELECTROTECHNICAL_DESIGN.' +
                        'LANGUAGE_ASSIGNMENT.' +
                        'ITEMS'))
        = 1;
  WR4:  SIZEOF(QUERY(i <* USEDIN(SELF,
                                'ELECTROTECHNICAL_DESIGN.' +
                                'APPLIED_IDENTIFICATION_ASSIGNMENT.' +
                                'ITEMS') |
                                i.role.name = 'version'))
        < 2;
END_ENTITY;
(*

```

Formal propositions:

WR1: Each instance of **note_representation** shall contain in its set of **items** exactly one element.

WR2: Each instance of **note_representation** shall contain in its set of **items** an instance of **descriptive_representation_item**.

WR3: For each instance of **note_representation** the **descriptive_representation_item** in its set of **items** shall be referenced by exactly one instance of **language_assignment** in the role of **items**.

ISO 10303-212:2001(E)

WR4: Each instance of **note_representation** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **note_representation** entity:

— representation_subtype_exclusiveness (see 5.2.3.99).

5.2.2.1.70 notification

A **notification** is a type of **characterized_object** that specifies a brief record of facts.

NOTE See application object definition for Notification (see 4.2.213) for more information.

EXPRESS specification:

```
*)
ENTITY notification
  SUBTYPE OF (characterized_object);
WHERE
  WR1:  SIZEOF(QUERY(i <* USEDIN(SELF,
                                'ELECTROTECHNICAL_DESIGN.' +
                                'APPLIED_IDENTIFICATION_ASSIGNMENT.' +
                                'ITEMS') |
                                i.role.name = 'version')
            ) < 2;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each instance of **notification** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **notification** entity:

— characterized_object_subtype_exclusiveness (see 5.2.3.6).

5.2.2.1.71 object_reference_designation_assignment

An **object_reference_designation_assignment** is a type of **item_designation_assignment** that specifies a reference designation which uniquely identifies the referenced **installation_location** or **product_definition** within its scope.

EXPRESS specification:

```
*)
ENTITY object_reference_designation_assignment
```

```

SUBTYPE OF (item_designation_assignment);
WHERE
  WR1:  SIZEOF(QUERY(i <* SELF.items |
                    SIZEOF(TYPEOF(i) *
                              ['ELECTROTECHNICAL_DESIGN.' +
                               'INSTALLATION_LOCATION',
                               'ELECTROTECHNICAL_DESIGN.' +
                               'PRODUCT_DEFINITION']
                              ) = 0 )
        ) = 0;
  WR2:  SIZEOF(QUERY(despd <* SELF.items |
                    ('ELECTROTECHNICAL_DESIGN.PRODUCT_DEFINITION'
                     IN TYPEOF(despd))
                    AND
                    NOT(despd\product_definition.frame_of_reference.name
                        IN ['conceptual definition',
                           'functional occurrence',
                           'part occurrence',
                           'system definition']))
        ) = 0;
  WR3:  SIZEOF(TYPEOF(SELF) *
              ['ELECTROTECHNICAL_DESIGN.' +
               'DOCUMENT_DESIGNATION_ASSIGNMENT',
               'ELECTROTECHNICAL_DESIGN.' +
               'OBJECT_REFERENCE_DESIGNATION_ASSIGNMENT',
               'ELECTROTECHNICAL_DESIGN.' +
               'SIGNAL_DESIGNATION_ASSIGNMENT',
               'ELECTROTECHNICAL_DESIGN.' +
               'TERMINAL_DESIGNATION_ASSIGNMENT']
        ) = 1;
END_ENTITY;
(*

```

Formal propositions:

WR1: Each instance of **object_reference_designation_assignment** shall contain in its set of **items** only an instance of either **installation_location** or **product_definition**.

WR2: If an instance of **object_reference_designation_assignment** contains an instance of **product_definition** in its set of **items** this **product_definition** shall have an associated **application_context_element** with a **name** of either 'conceptual definition', 'functional occurrence', 'part occurrence', or 'system definition'.

WR3: Each instance of **object_reference_designation_assignment** shall not be an instance of any other subtype of **item_designation_assignment**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **object_reference_designation_assignment** entity:

— **identification_assignment_subtype_exclusiveness** (see 5.2.3.71).

5.2.2.1.72 package_product_concept_feature

A **package_product_concept_feature** is a type of **product_concept_feature** that combines several **product_concept_feature** instances that shall be offered to the market as a set.

NOTE See application object definition for Specification (see 4.2.323) for more information.

EXPRESS specification:

```
*)
ENTITY package_product_concept_feature
  SUBTYPE OF (product_concept_feature);
WHERE
  WR1: NOT ( 'ELECTROTECHNICAL_DESIGN.' +
'CONDITIONAL_CONCEPT_FEATURE'
  IN TYPEOF ( SELF ) ) ;
  WR2: SIZEOF ( QUERY ( cfr <* USEDIN ( SELF ,
  'ELECTROTECHNICAL_DESIGN.CONCEPT_FEATURE_RELATIONSHIP.' +
  'RELATING_PRODUCT_CONCEPT_FEATURE'
  ) | ( 'ELECTROTECHNICAL_DESIGN.' +
  'CONCEPT_FEATURE_RELATIONSHIP_WITH_CONDITION' IN TYPEOF (
  cfr ) ) AND ( SIZEOF ( QUERY ( ipcf <* USEDIN ( cfr ,
  'ELECTROTECHNICAL_DESIGN.CONDITIONAL_CONCEPT_FEATURE.' + 'CONDITION'
  ) | 'ELECTROTECHNICAL_DESIGN.' +
  'INCLUSION_PRODUCT_CONCEPT_FEATURE' IN TYPEOF ( ipcf ) ) )
  =1 ) ) ) >0;
END_ENTITY;
(*
```

Formal propositions:

WR1: An **package_product_concept_feature** shall not be of type **conditional_concept_feature**.

WR2: A **package_product_concept_feature** shall be referenced as **relating_product_concept_feature** by at least one **concept_feature_relationship_with_condition** which is referenced as **condition** by a **conditional_concept_feature** of type **inclusion_product_concept_feature**.

5.2.2.1.73 page_connector_group

A **page_connector_group** is a type of **group** that represents a page connector that is used in schematic diagrams to indicate that a connecting line continues elsewhere on the same sheet or on another sheet of the drawing or in other related documents.

NOTE See application object definition for Page_connector (see 4.2.227) for more information.

EXPRESS specification:

```
*)
ENTITY page_connector_group
  SUBTYPE OF (group);
WHERE
  WR1: SIZEOF(QUERY(gr <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.' +
  'GROUP_RELATIONSHIP.' +
```

```

                'RELATED_GROUP') |
        (gr.name = 'connecting line ownership')
    AND
        ('ELECTROTECHNICAL_DESIGN.CONNECTING_LINE_GROUP'
        IN TYPEOF(gr.relatiing_group))
    )) = 1;
    WR2: SELF\group.description IN ['central', 'exclusive',
    'neutral'];
END_ENTITY;
(*

```

Formal propositions:

WR1: Each **page_connector_group** shall participate as the **related_group** in exactly one **group_relationship** with the name 'connecting line ownership' where the **relating_group** is of type **connecting_line_group**.

WR2: Each **page_connector_group** shall have a **description** with a value of either 'central', 'exclusive', or 'neutral'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **page_connector_group** entity:

— group_subtype_exclusiveness (see 5.2.3.69).

5.2.2.1.74 page_connector_presentation_group

A **page_connector_presentation_group** is a type of **group** that represents a visualization of a page connector in a schematic diagram.

NOTE See application object definition for Page_connector_presentation (see 4.2.228) for more information.

EXPRESS specification:

```

*)
ENTITY page_connector_presentation_group
    SUBTYPE OF (group);
WHERE
    WR1: SIZEOF(QUERY(gr <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.' +
        'GROUP_RELATIONSHIP.' +
        'RELATED_GROUP') |
        (gr.name = 'page connector ownership')
    AND
        ('ELECTROTECHNICAL_DESIGN.PAGE_CONNECTOR_GROUP'
        IN TYPEOF(gr.relatiing_group))
    )) = 1;
    WR2: SELF\group.description IN ['none', 'sink', 'source'];
END_ENTITY;
(*

```

ISO 10303-212:2001(E)

Formal propositions:

WR1: Each **page_connector_presentation_group** shall participate as the **related_group** in exactly one **group_relationship** with the name 'page connector ownership' where the **relating_group** is of type **page_connector_group**.

WR2: Each **page_connector_presentation_group** shall have a **description** with a value of either 'none', 'sink', or 'source'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **page_connector_presentation_group** entity:

— **group_subtype_exclusiveness** (see 5.2.3.69).

5.2.2.1.75 page_connector_reference_group

A **page_connector_reference_group** is a type of **group** that represents a cross reference that is made from one part of a diagram to another part between page connectors being part of the representations for the same network.

NOTE See application object definition for **Page_connector_reference** (see 4.2.229) for more information.

EXPRESS specification:

```
*)
ENTITY page_connector_reference_group
  SUBTYPE OF (group);
WHERE
  WR1: SIZEOF(USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.' +
                    'GROUP_ASSIGNMENT.' +
                    'ASSIGNED_GROUP'))
        = 1;
  WR2: SIZEOF(QUERY(gr <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.' +
                                'GROUP_RELATIONSHIP.' +
                                'RELATED_GROUP') |
                (gr.name = 'page connector presentation ownership')
                AND
                ('ELECTROTECHNICAL_DESIGN.PAGE_CONNECTOR_PRESENTATION_GROUP'
                 IN TYPEOF(gr.relying_group))
                )) = 1;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each **page_connector_reference_group** shall be referenced by exactly one **group_assignment** that is of type **page_connector_reference_group_assignment** as the **assigned_group**.

WR2: Each **page_connector_reference_group** shall participate as the **related_group** in exactly one **group_relationship** with the name 'page connector presentation ownership' where the **relating_group** is of type **page_connector_presentation_group**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **page_connector_reference_group** entity:

— group_subtype_exclusiveness (see 5.2.3.69).

5.2.2.1.76 page_connector_reference_group_assignment

A **page_connector_reference_group_assignment** is a type of **group_assignment** that assigns a **page_connector_reference_group** to either a **page_connector_group** or a **page_connector_presentation_group**.

EXPRESS specification:

```
*)
ENTITY page_connector_reference_group_assignment
  SUBTYPE OF (group_assignment);
  item : page_connector_reference_item;
END_ENTITY;
(*
```

Attribute definitions:

item: the item to which the **page_connector_reference_group** is assigned.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **page_connector_reference_group_assignment** entity:

— group_assignment_subtype_exclusiveness (see 5.2.3.67).

5.2.2.1.77 person_and_organization_address

A **person_and_organization_address** is a type of **personal_address** and **organizational_address**. It specifies the relevant address of a **person_and_organization**. See ARM definition for **Person_in_organization** (see 4.2.238) for more information.

EXPRESS specification:

```
*)
ENTITY person_and_organization_address
  SUBTYPE OF (organizational_address, personal_address);
WHERE
  WR1: SIZEOF ( SELF\personal_address. people ) =1;
  WR2: SIZEOF ( SELF\organizational_address. organizations ) =1;
  WR3: SIZEOF ( QUERY ( pao <* USEDIN ( SELF.people[1] ,
    'ELECTROTECHNICAL_DESIGN.PERSON_AND_ORGANIZATION.THE_PERSON' )
  |
```

ISO 10303-212:2001(E)

```
        pao. the_organization:=:SELF\organizational_address.
        organizations[1] ) ) =1;
END_ENTITY;
(*
```

Formal propositions:

WR1: There shall be exactly one item of type **person** in the set of **people**.

WR2: There shall be exactly one item of type **organization** in the set of **organizations**.

WR3: For each instance of type **person_and_organization_address** there exist a corresponding instance of type **person_and_organization**. The instance referenced by the attribute **people** of the instance of type **person_and_organization_address** is identical to the instance referenced by the attribute **the_person** of the instance of type **person_and_organization**. The instance referenced by the attribute **organizations** of the instance of type **person_and_organization_address** is identical to the instance referenced by the attribute **the_organization** of the instance of type **person_and_organization**.

5.2.2.1.78 physically_modelled_product_definition

A **physically_modelled_product_definition** is a type of **product_definition_with_associated_documents** that specifies a model of a shape of the part which is physically available. See ARM definition for **Physical_model** (see 4.2.244) in paragraph 4.2.x for more information.

EXPRESS specification:

```
*)
ENTITY physically_modelled_product_definition
  SUBTYPE OF (product_definition_with_associated_documents);
WHERE
  WR1:SELF.frame_of_reference\ application_context_element.name =
    'physical model occurrence' ;
  WR2: ( SIZEOF ( documentation_ids ) =1 ) AND ( SIZEOF ( QUERY (
    d <* documentation_ids | ( SIZEOF ( QUERY ( drt <*
    d.representation_types | ( drt.name ='physical' ) ) ) =1 )
  ) ) =1 ) ;
END_ENTITY;
(*
```

Formal propositions:

WR1: The **physically_modelled_product_definition** shall reference as its **frame_of_reference** a **product_definition_context** that has a **name** of 'physical model occurrence'.

WR2: The **physically_modelled_product_definition** shall have exactly one **document** in its set of **documentation_ids**. This **document** shall reference as its **representation_type** a **document_representation_type** that has a **name** of 'physical'.

Informal propositions:

IP1: In case the **physically_modelled_product_definition** is not referenced by a **product_definition_shape** as the **definition**, the scale shall be 1:1.

5.2.2.1.79 pre_defined_dimension_symbol

A **pre_defined_dimension_symbol** is a **pre_defined_symbol** that presents a dimension symbol and is identified by name.

NOTE 1 See application object definition for Dimension_symbol (see 4.2.98) for more information.

NOTE 2 The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```

*)
ENTITY pre_defined_dimension_symbol
  SUBTYPE OF (pre_defined_symbol);
WHERE
  WR1: SELF\pre_defined_item.name
    IN ['arc length',
        'conical taper',
        'counterbore',
        'countersink',
        'depth',
        'diameter',
        'plus minus',
        'radius',
        'slope',
        'spherical diameter',
        'spherical radius',
        'square'];
END_ENTITY;
(*

```

Formal propositions:

WR1: The **name** of the **pre_defined_dimension_symbol** shall be 'arc length', 'conical taper', 'counterbore', 'countersink', 'depth', 'diameter', 'plus minus', 'radius', 'slope', 'spherical diameter', 'spherical radius', or 'square'.

5.2.2.1.80 pre_defined_geometrical_tolerance_symbol

A **pre_defined_geometrical_tolerance_symbol** is a **pre_defined_symbol** that presents a geometrical tolerance and is identified by name.

ISO 10303-212:2001(E)

NOTE 1 See application object definition for Geometrical_tolerance_symbol (see 4.2.161) for more information.

NOTE 2 The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
ENTITY pre_defined_geometrical_tolerance_symbol
  SUBTYPE OF (pre_defined_symbol);
WHERE
  WR1: SELF\pre_defined_item.name
    IN ['angularity',
        'circular runout',
        'circularity',
        'concentricity',
        'cylindricity',
        'diameter',
        'flatness',
        'least material condition',
        'maximum material condition',
        'parallelism',
        'perpendicularity',
        'position',
        'profile of a line',
        'profile of a surface',
        'projected tolerance zone',
        'regardless of feature size',
        'straightness',
        'symmetry',
        'target point',
        'total runout'];
END_ENTITY;
(*
```

Formal propositions:

WR1: The **name** of the **pre_defined_geometrical_tolerance_symbol** shall be 'angularity', 'circular runout', 'circularity', 'concentricity', 'cylindricity', 'diameter', 'flatness', 'least material condition', 'maximum material condition', 'parallelism', 'perpendicularity', 'position', 'profile of a line', 'profile of a surface', 'projected tolerance zone', 'regardless of feature size', 'straightness', 'symmetry', 'target point', or 'total runout'.

5.2.2.1.81 pre_defined_point_marker_symbol

A **pre_defined_point_marker_symbol** is a **pre_defined_symbol** that presents the position of a point and is identified by name.

NOTE 1 See application object definition for Point_marker_symbol (see 4.2.246) for more information.

NOTE 2 The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
ENTITY pre_defined_point_marker_symbol
  SUBTYPE OF (pre_defined_symbol);
WHERE
  WR1: SELF\pre_defined_item.name
      IN ['asterisk',
         'circle',
         'dot',
         'plus',
         'square',
         'triangle',
         'x'];
END_ENTITY;
(*
```

Formal propositions:

WR1: The name of the **pre_defined_point_marker_symbol** shall be 'asterisk', 'circle', 'dot', 'plus', 'square', 'triangle', or 'x'.

5.2.2.1.82 pre_defined_terminator_symbol

A **pre_defined_terminator_symbol** is a **pre_defined_symbol** that presents a terminator and is identified by name.

NOTE 1 See application object definition for Terminator_symbol (see 4.2.341) for more information.

NOTE 2 The definition of this entity is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
ENTITY pre_defined_terminator_symbol
  SUBTYPE OF (pre_defined_symbol);
WHERE
  WR1: SELF\pre_defined_item.name
      IN ['blanked arrow',
         'blanked box',
         'blanked dot',
         'dimension origin',
         'filled arrow',
         'filled box',
         'filled dot',
         'integral symbol',
```

ISO 10303-212:2001(E)

```
        'open arrow',
        'slash',
        'unfilled arrow'];
END_ENTITY;
(*
```

Formal propositions:

WR1: The **name** of the **pre_defined_terminator_symbol** shall be 'blanked arrow', 'blanked box', 'blanked dot', 'dimension origin', 'filled arrow', 'filled box', 'filled dot', 'integral symbol', 'open arrow', 'slash', or 'unfilled arrow'.

5.2.2.1.83 predefined_connectivity_definition

A **predefined_connectivity_definition** is a type of **connectivity_definition** that represents physical connectivity that shall not be manipulated.

NOTE See application object definition for Predefined_connection (see 4.2.252) for more information.

EXPRESS specification:

```
*)
ENTITY predefined_connectivity_definition
  SUBTYPE OF (connectivity_definition);
WHERE
  WR1:  SIZEOF(QUERY(sar <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+
'SHAPE_ASPECT_RELATIONSHIP.' +
                                'RELATING_SHAPE_ASPECT') |
        sar.name = 'connectivity'))
=
  SIZEOF(QUERY(sar <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+
'SHAPE_ASPECT_RELATIONSHIP.' +
                                'RELATING_SHAPE_ASPECT') |
        (sar.name = 'connectivity')
        AND
        ('ELECTROTECHNICAL_DESIGN.TERMINAL'
         IN TYPEOF(sar.related_shape_aspect))
        AND
        (sar.related_shape_aspect.of_shape\
         property_definition.definition.frame_of_reference\
         application_context_element.name = 'part occurrence'))
);
END_ENTITY;
(*
```

Formal propositions:

WR1: For all **shape_aspect_relationships** with the **name** 'connectivity' the **predefined_connectivity_definition** participates in as the **relating_shape_aspect**, the

related_shape_aspects shall be of type **terminal**. The **application_context_elements** associated to the **product_definition** each **terminal** in the role of the **related_shape_aspect** is a **shape_aspect** of shall have a **name** of 'part occurrence'.

5.2.2.1.84 presentation_with_association

A **presentation_with_association** is a type of **presentation_representation** that relates an item to its presentation.

EXPRESS specification:

```
*)
ENTITY presentation_with_association
  SUBTYPE OF (presentation_representation);
WHERE
  WR1:  SIZEOF(SELF\representation.items) = 1;
  WR2:  SIZEOF(QUERY(pir <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+
  'PRESENTED_ITEM_REPRESENTATION.' +
                                'PRESENTATION') |
                                NOT('ELECTROTECHNICAL_DESIGN.' +
                                'PRESENTATION_WITH_ASSOCIATION'
                                IN TYPEOF(pir.item)))
  ) = 0;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each **presentation_with_association** shall contain exactly one element in its set of items.

WR2: Each **presentation_with_association** shall be used as **presentation** in a **presented_item_representation** where the **item** is of type **presented_item_with_association**.

5.2.2.1.85 presented_item_with_association

A **presented_item_with_association** is a type of **presented_item** that specifies the item that is presented. The item is associated directly to the draughting elements presenting it.

EXPRESS specification:

```
*)
ENTITY presented_item_with_association
  SUBTYPE OF (presented_item);
  items : SET [1:?] OF associated_item;
WHERE
  WR1:  SIZEOF(QUERY(pir <* USEDIN(SELF,
                                'ELECTROTECHNICAL_DESIGN.' +
                                'PRESENTED_ITEM_REPRESENTATION.ITEM') |
                                NOT('ELECTROTECHNICAL_DESIGN.PRESENTATION_WITH_ASSOCIATION'
                                IN TYPEOF(pir.presentation))
  )) = 0;
```

ISO 10303-212:2001(E)

```
END_ENTITY;  
(*
```

Formal propositions:

WR1: Each **presented_item_with_association** shall be used as **item** in a **presented_item_representation** where the **presentation** is of type **presentation_with_association**.

5.2.2.1.86 **process_variable**

A **process_variable** is a type of **characterized_object** that specifies a physical quantity being the underlying parameter communicated by a signal.

EXPRESS specification:

```
*)  
ENTITY process_variable  
  SUBTYPE OF (characterized_object);  
END_ENTITY;  
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **process_variable** entity:

— **characterized_object_subtype_exclusiveness** (see 5.2.3.6).

5.2.2.1.87 **product_class**

A **product_class** is a type of **product_concept** and **characterized_object** that is a specification of the company's end product.

NOTE See application object definition for **Product_class** (see 4.2.263) for more information.

EXPRESS specification:

```
*)  
ENTITY product_class  
  SUBTYPE OF (product_concept, characterized_object);  
END_ENTITY;  
(*
```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_class** entity:

Ñ **characterized_object_subtype_exclusiveness** (see 5.2.3.6);

Ñ **restrict_configuration_design_for_product_class** (see 5.2.3.113).

5.2.2.1.88 product_concept_feature_category

A **product_concept_feature_category** is a type of **group** that specifies a set of similar **product_concept_feature** instances.

NOTE See application object definition for **Specification_category** (see 4.2.324) for more information.

EXPRESS specification:

```

*)
ENTITY product_concept_feature_category
  SUBTYPE OF (group);
WHERE
  WR1: SIZEOF ( QUERY ( aga <* USEDIN ( SELF ,
    'ELECTROTECHNICAL_DESIGN.GROUP_ASSIGNMENT.'+'ASSIGNED_GROUP' )
  |
    ( 'ELECTROTECHNICAL_DESIGN.'+ 'APPLIED_GROUP_ASSIGNMENT' IN
    TYPEOF ( aga ) ) AND ( ( aga. role.name<>
    'specification category member' ) OR ( SIZEOF ( QUERY ( i
    <* aga. items | ( 'ELECTROTECHNICAL_DESIGN.'+
    'PRODUCT_CONCEPT_FEATURE' IN TYPEOF ( i ) ) AND NOT (
    'ELECTROTECHNICAL_DESIGN.'+ 'CONDITIONAL_CONCEPT_FEATURE' IN
    TYPEOF ( i ) ) ) ) ) <> SIZEOF ( aga. items ) ) ) ) ) =0;
END_ENTITY;
(*

```

Formal Propositions:

WR1: A **product_concept_feature_category** shall only be referenced as **assigned_group** by **applied_group_assignment** instances which reference as **role** an **object_role** with a **name** of 'specification category member' and which only contain **product_concept_features** in their set of **items** which are not of type **conditional_concept_feature**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_class** entity:

- group_subtype_exclusiveness (see 5.2.3.69);
- product_concept_feature_requires_category (see 5.2.3.81);
- restrict_group_relationship_for_specification_category (see 5.2.3.119).

5.2.2.1.89 product_concept_feature_category_usage

A **product_concept_feature_category_usage** is a type of **group_assignment** that assigns a **product_concept_feature_category** to a **product_class**. The **product_concept_feature_category_usage** specifies if the usage of one or more of the grouped **product_concept_feature** instances is mandatory or optional for all products of that **product_class**.

ISO 10303-212:2001(E)

NOTE See application object definition for `Class_category_association` (see 4.2.40) for more information.

EXPRESS specification:

```
*)
ENTITY product_concept_feature_category_usage
  SUBTYPE OF (group_assignment);
  items : SET [1:?] OF category_usage_item;
WHERE
  WR1: 'ELECTROTECHNICAL_DESIGN.PRODUCT_CONCEPT_FEATURE_CATEGORY'
      IN TYPEOF(SELF.assigned_group);
  WR2: SELF.role.name IN ['mandatory category usage',
                          'optional category usage'];
END_ENTITY;
(*
```

Attribute definitions:

items: the set of items to which the **product_concept_feature_category** is assigned.

Formal Propositions:

WR1: The **product_concept_feature_category_usage** shall reference as its **assigned_group** a **group** that is of type **product_concept_feature_category**.

WR2: The **product_concept_feature_category_usage** shall reference as its **role** a **group_role** that has a **name** of either 'mandatory category usage' or 'optional category usage'.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_concept_feature_category_usage** entity:

- `group_assignment_subtype_exclusiveness` (see 5.2.3.67);
- `restrict_effectivity_assignment_for_class_category_usage` (see 5.2.3.115).

5.2.2.1.90 product_identification

A **product_identification** is a type of **configuration_item** and **characterized_object** that identifies a manufacturable object, or expected as so, which is defined with respect to the **product_class** it is a member of.

EXPRESS specification:

```
*)
ENTITY product_identification
  SUBTYPE OF (configuration_item,characterized_object);
WHERE
  WR1: SIZEOF ( QUERY ( cd <* USEDIN ( SELF ,
      'ELECTROTECHNICAL_DESIGN.CONFIGURATION_DESIGN.CONFIGURATION' )
      |
      ( 'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION_FORMATION' IN
```

```

    TYPEOF ( cd. design ) ) AND ( SIZEOF ( QUERY ( prpc <*
    USEDIN ( cd. design\product_definition_formation.
    of_product ,

'ELECTROTECHNICAL_DESIGN.PRODUCT_RELATED_PRODUCT_CATEGORY.PRODUCTS'
    ) | prpc. name IN ['part' , 'raw material' , 'tool'] ) ) >0
    ) ) ) <=1;
WR2: 'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_CLASS' IN TYPEOF (
    SELF.item_concept ) ;
WR3: NOT ( 'ELECTROTECHNICAL_DESIGN.'+ 'CONFIGURABLE_ITEM' IN
    TYPEOF
    ( SELF ) ) OR ( 'ELECTROTECHNICAL_DESIGN.'+
    'PRODUCT_SPECIFICATION' IN TYPEOF ( SELF ) ) ;
END_ENTITY;
(*

```

Formal propositions:

WR1: Each **product_identification** shall be referenced as the **configuration** by at most one instance of **configuration_design** that references as **design** a **product_definition_formation** which references as **of_product** a **product** which is contained in the **of_products** set of a **product_related_product_category** with a **name** of either 'part', 'raw material', or 'tool'.

WR2: Each **product_identification** shall reference as its **item_concept** a **product_class**.

WR3: If a **product_identification** is of type **configurable_item** it shall also be of type **product_specification**. If a **product_identification** is of type **product_specification** it shall also be of type **configurable_item**.

5.2.2.1.91 product_specification

A **product_specification** is a type of **configurable_item** and **characterized_object** that is a characterization of a manufacturable product for which one or more associated **product_concept_features** enhance the characterization provided for the associated **product_class**.

NOTE See application object definition for Product_specification (see 4.2.269) for more information.

EXPRESS specification:

```

*)
ENTITY product_specification
    SUBTYPE OF (product_identification,configurable_item);
END_ENTITY;
(*

```

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_specification** entity:

— **characterized_object_subtype_exclusiveness** (see 5.2.3.6).

ISO 10303-212:2001(E)

5.2.2.1.92 reference_grid_layout

A **reference_grid_layout** is a symbol that presents the layout or format for a reference grid of a drawing sheet or a drawing view.

NOTE See application object definition for Reference_grid_layout (see 4.2.284) for more information.

EXPRESS specification:

```
*)
ENTITY reference_grid_layout
  SUBTYPE OF (draughting_symbol_representation);
WHERE
  WR1:  SIZEOF(QUERY(rr <* USEDIN(SELF,
                                'ELECTROTECHNICAL_DESIGN.' +

                                 IN TYPEOF(rr.rep_2))
                                )) = 1;
END_ENTITY;
(*
```

Formal propositions:

WR1: Each **reference_grid_layout** shall participate as the **rep_1** in exactly one **representation_relationship** with a **name** of 'reference grid' where the **rep_2** is a **reference_grid_representation**.

5.2.2.1.93 reference_grid_representation

A **reference_grid_representation** is a type of **representation** that defines a grid reference system in accordance with IEC 1082-1.

NOTE See application object definition for Reference_grid (see 4.2.283) for more information.

EXPRESS specification:

```
*)
ENTITY reference_grid_representation
  SUBTYPE OF (representation);

(*

```

Formal Propositions:

WR1: The **retention** shall be referenced as the **assigned_action** by at least one instance of **applied_action_assignment** that has a **role** with **name** 'retention'.

WR2: The **retention** shall be contained in the set of **items** of exactly one **applied_time_interval_assignment** that references as its **role** a **time_interval_role** with a **name** of 'minimum retention period', and shall be contained in the set of **items** of exactly one **applied_time_interval_assignment** that references as its **role** a **time_interval_role** with a **name** of 'maximum retention period'. Both **applied_time_interval_assignment** instances shall reference as **assigned_time_interval** a **time_interval_with_bounds** that has its **primary_bound** and either one of **secondary_bound** or **duration** attributes instantiated. Both **applied_time_interval_assignment** instances shall have the same **primary_bound**.

WR3: The **retention** shall not be referenced by an **action_relationship**.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **retention** entity:

- **action_subtype_exclusiveness** (see 5.2.3.1);
- **dependent_instantiable_retention** (see 5.2.3.42);
- **retention_requires_retention_assignment** (see 5.2.3.144).

5.2.2.1.95 routed_segment

A **routed_segment** is a type of **shape_aspect** that specifies a portion of a routing path that has a well defined course.

EXPRESS specification:

```

*)
ENTITY routed_segment
  SUBTYPE OF (installation_segment);
WHERE
  WR1:  SIZEOF(QUERY(sar <* USEDIN(SELF, 'ELECTROTECHNICAL_DESIGN.'
+
'SHAPE_ASPECT_RELATIONSHIP.' +

        item_element ) ;
  WR2:value_range_wr2 ( item_element ) ;
  WR3:value_range_wr3 ( item_element ) ;
END_ENTITY;
(*
```

Formal propositions:

WR1: The **value_range** shall have a **set_representation_item** as its **item_element**. This **set_representation_item** shall have exactly two **representation_items** of the same type in its set that are either **measure_representation_items** or **value_representation_items**.

WR2: One of the **representation_items** in the set specified by **item_element** shall have a **name** of 'upper limit', and the other a **name** of 'lower limit'.

WR3: If the set specified by **item_element** consists of **measure_representation_items**, then the **measure_representation_items** shall point to the same instance of **named_unit** or **derived_unit** as their respective **unit_component**.

5.2.2.2 electrotechnical_design imported entity modifications

5.2.2.2.1 action

The base definition of the **action** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **action** entity:

- action_subtype_exclusiveness (see 5.2.3.1);
- restrict_version_assignment_for_action.

5.2.2.2.2 action_directive

The base definition of the **action_directive** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **action_directive** entity:

- dependent_instantiable_action_directive (see 5.2.3.12);
- restrict_version_assignment_for_action_directive (see 5.2.3.134).

5.2.2.2.3 action_method

The base definition of the **action_method** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **action_method** entity:

- restrict_version_assignment_for_action_method.

5.2.2.2.4 action_relationship

The base definition of the **action_relationship** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **action_relationship** entity:

- action_relationship_constraint.

5.2.2.2.5 action_request_status

The base definition of the **action_request_status** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **action_relationship** entity:

— **versioned_action_request_requires_status** (see 5.2.3.162).

5.2.2.2.6 address

The base definition of the **address** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **address** entity:

— **dependent_instantiable_address** (see 5.2.3.13).

5.2.2.2.7 annotation_occurrence

The base definition of the **annotation_occurrence** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **annotation_occurrence** entity:

— **subtype_mandatory_annotation_occurrence** (see 5.2.3.151).

5.2.2.2.8 annotation_occurrence_relationship

The base definition of the **annotation_occurrence_relationship** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Informal propositions:

The following additional informal propositions apply:

IP1: Instances of **annotation_occurrence_relationship** with the name ‘detached representation reference’ are used to establish references between different presentations, i.e. between **annotation_occurrences**, for a specific object that are located at different parts of a diagram. The **related_annotation_occurrence** specifies the presentation the **annotation_occurrence_relationship** is a part of. The presentation specified by the **relating_annotation_occurrence** is the one that is referenced by the **annotation_occurrence_relationship**.

5.2.2.2.9 **annotation_text_occurrence**

The base definition of the **annotation_text_occurrence** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **annotation_text_occurrence** entity:

— **restrict_language_assignment_for_annotation_text_occurrence** (see 5.2.3.121).

5.2.2.2.10 **application_context**

The base definition of the **application_context** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **application_context** entity:

— **application_protocol_definition_required** (see 5.2.3.2).

5.2.2.2.11 **approval**

The base definition of the **approval** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **approval** entity:

— **approval_requires_approval_assignment** (see 5.2.3.4).

5.2.2.2.12 **approval_person_organization**

The base definition of the **approval_person_organization** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **approval_person_organization** entity:

— **approval_person_organization_requires_date_time** (see 5.2.3.3).

5.2.2.2.13 **approval_role**

The base definition of the **approval_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **approval_role** entity:

— `dependent_instantiable_approval_role` (see 5.2.3.14).

5.2.2.2.14 **approval_status**

The base definition of the **approval_status** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **approval_status** entity:

— `dependent_instantiable_approval_status` (see 5.2.3.15);

— `restrict_class_system_assignment_for_approval_status` (see 5.2.3.107).

5.2.2.2.15 **assembly_component_usage**

The base definition of the **assembly_component_usage** entity is given in ISO 10303-44. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **assembly_component_usage** entity:

— `assembly_component_usage_reference_designation_constraint` (see 5.2.3.5);

— `selected_instance_usage_requires_representation` (see 5.2.3.146).

5.2.2.2.16 **attribute_value_role**

The base definition of the **attribute_value_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **attribute_value_role** entity:

— `dependent_instantiable_attribute_value_role` (see 5.2.3.16).

5.2.2.2.17 **bounded_curve**

The base definition of the **bounded_curve** entity is given in ISO 10303-42. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **bounded_curve** entity:

ISO 10303-212:2001(E)

— subtype_mandatory_bounded_curve (see 5.2.3.152).

5.2.2.2.18 camera_image

The base definition of the **camera_image** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **camera_image** entity:

- restrict_camera_image_in_view (see 5.2.3.106);
- subtype_mandatory_camera_image (see 5.2.3.153).

5.2.2.2.19 camera_model

The base definition of the **camera_model** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **camera_model** entity:

- subtype_mandatory_camera_model (see 5.2.3.154).

5.2.2.2.20 classification_role

The base definition of the **classification_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **classification_role** entity:

- dependent_instantiable_classification_role (see 5.2.3.17).

5.2.2.2.21 colour_rgb

The base definition of the **colour_rgb** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **colour_rgb** entity:

- dependent_instantiable_colour_rgb (see 5.2.3.18).

5.2.2.2.22 compound_representation_item

The base definition of the **compound_representation_item** entity is given in ISO 10303-43. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **compound_representation_item** entity:

— representation_item_subtype_exclusiveness (see 5.2.3.97).

5.2.2.2.23 concept_feature_operator

The base definition of the **concept_feature_operator** entity is given in ISO 10303-44. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **concept_feature_operator** entity:

— restrict_concept_feature_operator (see 5.2.3.112).

5.2.2.2.24 configuration_design

The base definition of the **configuration_design** entity is given in ISO 10303-44. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **configuration_design** entity:

— configuration_design_constraint (see 5.2.3.10);

— restrict_configuration_design_for_product_class (see 5.2.3.113).

5.2.2.2.25 configuration_item

The base definition of the **configuration_item** entity is given in ISO 10303-44. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **configuration_item** entity:

— restrict_version_assignment_for_configuration_item (see 5.2.3.137).

5.2.2.2.26 curve

The base definition of the **curve** entity is given in ISO 10303-42. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **curve** entity:

ISO 10303-212:2001(E)

- dependent_instantiable_curve_style (see 5.2.3.19);
- subtype_mandatory_curve (see 5.2.3.155).

5.2.2.2.27 curve_style_font

The base definition of the **curve_style_font** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **curve_style_font** entity:

- curve_font_usage (see 5.2.3.11).

5.2.2.2.28 date

The base definition of the **date** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **date** entity:

- dependent_instantiable_date (see 5.2.3.20);
- subtype_mandatory_date (see 5.2.3.156).

5.2.2.2.29 date_and_time

The base definition of the **date_and_time** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **date_and_time** entity:

- dependent_instantiable_date_and_time (see 5.2.3.21).

5.2.2.2.30 date_role

The base definition of the **date_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **date_role** entity:

- dependent_instantiable_date_role (see 5.2.3.22).

5.2.2.2.31 **date_time_role**

The base definition of the **date_time_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **date_time_role** entity:

— `dependent_instantiable_date_time_role` (see 5.2.3.23).

5.2.2.2.32 **derived_unit**

The base definition of the **derived_unit** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **derived_unit** entity:

— `dependent_instantiable_derived_unit` (see 5.2.3.24).

5.2.2.2.33 **descriptive_representation_item**

The base definition of the **descriptive_representation_item** entity is given in ISO 10303-45. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **descriptive_representation_item** entity:

— `representation_item_subtype_exclusiveness` (see 5.2.3.97);

— `restrict_language_assignment_for_descriptive_representation_item`.

5.2.2.2.34 **document_usage_role**

The base definition of the **document_usage_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **document_usage_role** entity:

— `dependent_instantiable_document_usage_role` (see 5.2.3.25).

5.2.2.2.35 **draughting_callout**

The base definition of the **draughting_callout** entity is given in ISO 10303-101. The following modifications apply to this part of ISO 10303.

ISO 10303-212:2001(E)

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **draughting_callout** entity:

— subtype_mandatory_draughting_callout (see 5.2.3.157).

5.2.2.2.36 draughting_subfigure_representation

The base definition of the **draughting_subfigure_representation** entity is given in ISO 10303-504. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **draughting_subfigure_representation** entity:

— draughting_subfigure_representation_layers (see 5.2.3.51).

5.2.2.2.37 draughting_title

The base definition of the **draughting_title** entity is given in ISO 10303-101. The following modifications apply to this part of ISO 10303.

Informal propositions:

The following additional informal propositions apply:

IP1: The values of the attribute **language** shall be specified according to the language codes defined in ISO 639-2.

5.2.2.2.38 drawing_revision

The base definition of the **drawing_revision** entity is given in ISO 10303-101. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **drawing_revision** entity:

— drawing_revision_requires_document_designation;

— restrict_draughting_title_for_drawing_revision.

5.2.2.2.39 drawing_sheet_revision

The base definition of the **drawing_sheet_revision** entity is given in ISO 10303-101. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **drawing_sheet_revision** entity:

- `drawing_sheet_annotation_layers` (see 5.2.3.53);
- `presentation_view_presented_once` (see 5.2.3.79);
- `drawing_sheet_revision_requires_document_designation`;
- `restrict draughting_title_for_drawing_sheet_revision` (see 5.2.3.114);
- `sheets_belong_to_one_drawing` (see 5.2.3.149).

5.2.2.2.40 `drawing_sheet_revision_usage`

The base definition of the `drawing_sheet_revision_usage` entity is given in ISO 10303-101. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the `drawing_sheet_revision_usage` entity:

- `sheets_belong_to_one_drawing` (see 5.2.3.149).

5.2.2.2.41 `effectivity`

The base definition of the `effectivity` entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the `effectivity` entity:

- `restrict_effectivity_usage` (see 5.2.3.117);
- `restrict_version_assignment_for_effectivity` (see 5.2.3.139).

5.2.2.2.42 `effectivity_context_role`

The base definition of the `effectivity_context_role` entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the `effectivity_context_role` entity:

- `dependent_instantiable_effectivity_context_role`.

5.2.2.2.43 `effectivity_relationship`

The base definition of the `effectivity_relationship` entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

ISO 10303-212:2001(E)

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **effectivity_relationship** entity:

— `restrict_effectivity_for_effectivity_relationship` (see 5.2.3.116).

5.2.2.2.44 event_occurrence

The base definition of the **event_occurrence** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **event_occurrence** entity:

— `event_occurrence_requires_event_occurrence_assignment` (see 5.2.3.59).

5.2.2.2.45 event_occurrence_assignment

The base definition of the **event_occurrence_assignment** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **event_occurrence_assignment** entity:

— `event_occurrence_requires_event_occurrence_assignment` (see 5.2.3.59).

5.2.2.2.46 executed_action

The base definition of the **executed_action** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **executed_action** entity:

— `executed_action_requires_status` (see 5.2.3.60).

5.2.2.2.47 external_identification_assignment

The base definition of the **external_identification_assignment** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **external_identification_assignment** entity:

— `identification_assignment_subtype_exclusiveness` (see 5.2.3.71).

5.2.2.2.48 externally_defined_curve_font

The base definition of the **externally_defined_curve_font** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **externally_defined_curve_font** entity:

— curve_font_usage (see 5.2.3.11).

5.2.2.2.49 externally_defined_item

The base definition of the **externally_defined_item** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **externally_defined_item** entity:

— externally_defined_item_subtype_exclusiveness (see 5.2.3.63).

5.2.2.2.50 externally_defined_item_relationship

The base definition of the **externally_defined_item_relationship** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **externally_defined_item_relationship** entity:

— externally_defined_item_relationship_constraint (see 5.2.3.62).

5.2.2.2.51 externally_defined_symbol

The base definition of the **externally_defined_symbol** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **externally_defined_symbol** entity:

— dependent_instantiable_externally_defined_symbol (see 5.2.3.26).

ISO 10303-212:2001(E)

5.2.2.2.52 externally_defined_text_font

The base definition of the **externally_defined_text_font** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **externally_defined_text_font** entity:

— text_font_usage (see 5.2.3.160).

5.2.2.2.53 fill_area_style

The base definition of the **fill_area_style** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **fill_area_style** entity:

— dependent_instantiable_fill_area_style (see 5.2.3.27).

5.2.2.2.54 fill_area_style_colour

The base definition of the **fill_area_style_colour** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **fill_area_style_colour** entity:

— dependent_instantiable_fill_area_style_colour (see 5.2.3.28).

5.2.2.2.55 fill_area_style_tile_symbol_with_style

The base definition of the **fill_area_style_tile_symbol_with_style** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **fill_area_style_tile_symbol_with_style** entity:

— fill_area_style_tile_symbol_constraint (see 5.2.3.64).

5.2.2.2.56 general_property

The base definition of the **general_property** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **general_property** entity:

- **general_property_constraint** (see 5.2.3.65);
- **restrict_property_value_format_for_general_property** (see 5.2.3.127);
- **restrict_version_assignment_for_general_property** (see 5.2.3.140).

5.2.2.2.57 geometric_representation_context

The base definition of the **geometric_representation_context** entity is given in ISO 10303-42. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **geometric_representation_context** entity:

- **dimensionality_is_two_or_three** (see 5.2.3.49).

5.2.2.2.58 geometric_representation_item

The base definition of the **geometric_representation_item** entity is given in ISO 10303-42. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **geometric_representation_item** entity:

- **representation_item_subtype_exclusiveness** (see 5.2.3.97).

5.2.2.2.59 global_unit_assigned_context

The base definition of the **global_unit_assigned_context** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **global_unit_assigned_context** entity:

- **global_length_and_angle_units_2d_or_3d** (see 5.2.3.66).

5.2.2.2.60 global_uncertainty_assigned_context

The base definition of the **global_uncertainty_assigned_context** entity is given in ISO 10303-43. The following modifications apply to this part of ISO 10303.

Associated global rules:

ISO 10303-212:2001(E)

The following global rules defined in this part of ISO 10303 apply to the **global_uncertainty_assigned_context** entity:

— **restrict_uncertainty_in_global_uncertainty_assigned_context** (see 5.2.3.133).

5.2.2.2.61 **group_relationship**

The base definition of the **group_relationship** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **group_relationship** entity:

— **group_relationship_constraint** (see 5.2.3.68);

— **restrict_group_relationship_for_general_classification_hierarchy** (see 5.2.3.118);

— **restrict_group_relationship_for_specification_category** (see 5.2.3.119).

5.2.2.2.62 **identification_assignment_relationship**

The base definition of the **identification_assignment_relationship** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **identification_assignment_relationship** entity:

— **identification_assignment_relationship_constraint** (see 5.2.3.70).

5.2.2.2.63 **identification_role**

The base definition of the **identification_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **identification_role** entity:

— **dependent_instantiable_identification_role** (see 5.2.3.29).

5.2.2.2.64 **mapped_item**

The base definition of the **mapped_item** entity is given in ISO 10303-43. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **mapped_item** entity:

- drawing_sheet_layout_usage (see 5.2.3.54);
- reference_grid_layout_usage (see 5.2.3.94);
- representation_item_subtype_exclusiveness (see 5.2.3.97).

5.2.2.2.65 **measure_representation_item**

The base definition of the **measure_representation_item** entity is given in ISO 10303-45. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **measure_representation_item** entity:

- representation_item_subtype_exclusiveness (see 5.2.3.97).

5.2.2.2.66 **measure_with_unit**

The base definition of the **measure_with_unit** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **measure_with_unit** entity:

- dependent_instantiable_measure_with_unit (see 5.2.3.30).

5.2.2.2.67 **named_unit**

The base definition of the **named_unit** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **named_unit** entity:

- dependent_instantiable_named_unit (see 5.2.3.31).

5.2.2.2.68 **object_role**

The base definition of the **object_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **object_role** entity:

- dependent_instantiable_object_role (see 5.2.3.32);
- restrict_applied_action_assignment (see 5.2.3.101);

ISO 10303-212:2001(E)

- restrict_applied_action_request_assignment (see 5.2.3.102);
- restrict_applied_organizational_project_assignment (see 5.2.3.105).

5.2.2.2.69 organization_role

The base definition of the **organization_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **organization_role** entity:

- dependent_instantiable_organization_role (see 5.2.3.33).

5.2.2.2.70 organizational_project_role

The base definition of the **organizational_project_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **organizational_project_role** entity:

- dependent_instantiable_organizational_project_role (see 5.2.3.34).

5.2.2.2.71 path

The base definition of the **path** entity is given in ISO 10303-42. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **path** entity:

- restrict_version_assignment_for_path (see 5.2.3.141).

5.2.2.2.72 person

The base definition of the **person** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **person** entity:

- dependent_instantiable_person (see 5.2.3.35);
- person_requires_person_and_organization (see 5.2.3.73).

5.2.2.2.73 person_and_organization_role

The base definition of the **person_and_organization_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **person_and_organization_role** entity:

— `dependent_instantiable_person_and_organization_role` (see 5.2.3.36).

5.2.2.2.74 pre_defined_colour

The base definition of the **pre_defined_colour** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **pre_defined_colour** entity:

— `dependent_instantiable_pre_defined_colour` (see 5.2.3.37).

5.2.2.2.75 pre_defined_curve_font

The base definition of the **pre_defined_curve_font** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **pre_defined_curve_font** entity:

— `curve_font_usage` (see 5.2.3.11);

— `subtype_mandatory_pre_defined_curve_font` (see 5.2.3.158).

5.2.2.2.76 pre_defined_item

The base definition of the **pre_defined_item** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **pre_defined_item** entity:

— `pre_defined_item_subtype_exclusiveness` (see 5.2.3.75).

5.2.2.2.77 pre_defined_symbol

The base definition of the **pre_defined_symbol** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

ISO 10303-212:2001(E)

The following global rules defined in this part of ISO 10303 apply to the **pre_defined_symbol** entity:

- `dependent_instantiable_pre_defined_symbol` (see 5.2.3.38);
- `subtype_mandatory_pre_defined_symbol` (see 5.2.3.159).

5.2.2.2.78 **pre_defined_text_font**

The base definition of the **pre_defined_text_font** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **pre_defined_text_font** entity:

- `text_font_usage` (see 5.2.3.160).

5.2.2.2.79 **precision_qualifier**

The base definition of the **precision_qualifier** entity is given in ISO 10303-45. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **precision_qualifier** entity:

- `dependent_instantiable_precision_qualifier` (see 5.2.3.39).

5.2.2.2.80 **presentation_representation**

The base definition of the **presentation_representation** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **presentation_representation** entity:

- `draughting_model_annotation_layers` (see 5.2.3.50).

5.2.2.2.81 **presentation_size**

The base definition of the **presentation_size** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **presentation_size** entity:

- `presentation_size_constraint` (see 5.2.3.77).

5.2.2.2.82 presentation_style_by_context

The base definition of the **presentation_style_by_context** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **presentation_style_by_context** entity:

- dependent_instantiable_presentation_style_by_context (see 5.2.3.40);
- presentation_style_by_context_constraint (see 5.2.3.78).

5.2.2.2.83 presentation_view

The base definition of the **presentation_view** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **presentation_view** entity:

- drawing_view_annotation_layers (see 5.2.3.56);
- presentation_view_presented_once (see 5.2.3.79).

5.2.2.2.84 presented_item

The base definition of the **presented_item** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **presented_item** entity:

- presented_item_subtype_exclusiveness (see 5.2.3.80).

5.2.2.2.85 product

The base definition of the **product** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product** entity:

- product_requires_category (see 5.2.3.86);
- product_requires_version (see 5.2.3.88);
- restrict_identification_assignment_for_product (see 5.2.3.120);

ISO 10303-212:2001(E)

— restrict_product_category_name.

5.2.2.2.86 product_concept

The base definition of the **product_concept** entity is given in ISO 10303-44. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_concept** entity:

— restrict_version_assignment_for_product_concept (see 5.2.3.142).

5.2.2.2.87 product_concept_feature

The base definition of the **product_concept_feature** entity is given in ISO 10303-44. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_concept_feature** entity:

— product_concept_feature_requires_category (see 5.2.3.81);

— restrict_version_assignment_for_product_concept_feature (see 5.2.3.143).

5.2.2.2.88 product_definition

The base definition of the **product_definition** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition** entity:

— complex_product_requires_product_definition (see 5.2.3.9);

— physical_instance_requires_product_definition (see 5.2.3.74);

— product_definition_constraint (see 5.2.3.82);

— restrict_alternative_definition (see 5.2.3.100).

5.2.2.2.89 product_definition_context

The base definition of the **product_definition_context** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition_context** entity:

- product_definition_context_constraint (see 5.2.3.84);

5.2.2.2.90 product_definition_context_association

The base definition of the **product_definition_context_association** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition_context_association** entity:

- product_definition_context_association_constraint (see 5.2.3.83);

5.2.2.2.91 product_definition_formation

The base definition of the **product_definition_formation** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition_formation** entity:

- complex_product_requires_product_definition (see 5.2.3.9);
- physical_instance_requires_product_definition (see 5.2.3.74);
- product_requires_version (see 5.2.3.88).

5.2.2.2.92 product_definition_substitute

The base definition of the **product_definition_substitute** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition_substitute** entity:

- restrict_product_definition_substitute (see 5.2.3.125).

5.2.2.2.93 product_definition_relationship

The base definition of the **product_definition_relationship** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

ISO 10303-212:2001(E)

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition_relationship** entity:

— **product_definition_relationship_constraint** (see 5.2.3.85).

5.2.2.2.94 product_related_product_category

The base definition of the **product_related_product_category** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_related_product_category** entity:

— **product_requires_category** (see 5.2.3.86).

5.2.2.2.95 property_definition

The base definition of the **property_definition** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **property_definition** entity:

— **property_definition_constraint** (see 5.2.3.89);

— **property_definition_subtype_exclusiveness**.

5.2.2.2.96 property_definition_relationship

The base definition of the **property_definition_relationship** entity is given in ISO 10303-45. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition_relationship** entity:

— **property_definition_relationship_constraint** (see 5.2.3.90).

Informal propositions:

The following additional informal propositions apply:

IP1: Instances of **property_definition_relationship** with the **name** ‘encountered object sequence’ are used to specify the order of the items encountered along the path represented by an **installation_route**. The association to the **installation_route** is established by the **relating_property_definition** that has the **name** ‘route requirements’ and that is the **property_definition** of an **installation_route**. The **related_property_definition** shall be the

property_definition of an instance of either **connectivity_definition**, **installation_location**, **product_component**, **product_definition**, or **signal** representing an item that may be encountered along the path. It shall have the **name** ‘route characteristics’. The ordering of the encountered items is identified by the **description** (‘first element’, ‘second element’, etc.) of these **property_definition_relationships**.

5.2.2.2.97 **property_definition_representation**

The base definition of the **property_definition_representation** entity is given in ISO 10303-45. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **product_definition_representation** entity:

— **property_definition_representation_constraint** (see 5.2.3.91).

5.2.2.2.98 **representation**

The base definition of the **representation** entity is given in ISO 10303-43. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **representation** entity:

- **representation_constraint** (see 5.2.3.95);
- **representation_subtype_exclusiveness** (see 5.2.3.99);
- **restrict_language_assignment_for_representation**;
- **restrict_representation_for_document_content_property** (see 5.2.3.128);
- **restrict_representation_for_document_creation_property** (see 5.2.3.129);
- **restrict_representation_for_document_format_property** (see 5.2.3.130);
- **restrict_representation_for_document_properties** (see 5.2.3.131);
- **restrict_representation_for_document_size_property** (see 5.2.3.132).

Informal propositions:

The following additional informal propositions apply:

IP1: Instances of **representation** with a **name** of either ‘reference grid column representation’ or ‘reference grid row representation’ contain in its set of **items** a number of **descriptive_representation_items** representing an ordered list. The ordering of the items is identified by the **name** of the **descriptive_representation_items** (‘first element’, ‘second element’, etc.).

ISO 10303-212:2001(E)

5.2.2.2.99 representation_item

The base definition of the **representation_item** entity is given in ISO 10303-43. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **representation_item** entity:

- representation_item_constraint (see 5.2.3.96);
- representation_item_subtype_exclusiveness (see 5.2.3.97).

5.2.2.2.100 representation_relationship

The base definition of the **representation_relationship** entity is given in ISO 10303-43. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **representation_relationship** entity:

- representation_relationship_constraint (see 5.2.3.98).

Informal propositions:

The following additional informal propositions apply:

IP1: If a **representation_relationship** has a **name** of ‘note representation set’ then the **rep_1** is the representation of a **Set_of_notes** (see 4.2.305). The **rep_2** of such a relationship is a constituent of the **Set_of_notes** (see 4.2.305) referenced by the **rep_1**. All those **representations** referenced in the role of **rep_2** by such relationships referencing the same **representation** in the role of **rep_1** are grouped into that **Set_of_notes** (see 4.2.305).

5.2.2.2.101 security_classification

The base definition of the **security_classification** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **security_classification** entity:

- security_classification_requires_security_classification_assignment.

5.2.2.2.102 security_classification_level

The base definition of the **security_classification_level** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **security_classification_level** entity:

— **dependent_instantiable_security_classification_level** (see 5.2.3.43).

5.2.2.2.103 shape_aspect

The base definition of the **shape_aspect** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **shape_aspect** entity:

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

5.2.2.2.104 shape_aspect_relationship

The base definition of the **shape_aspect_relationship** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **shape_aspect_relationship** entity:

— **shape_aspect_relationship_constraint** (see 5.2.3.147);

— **shape_aspect_subtype_exclusiveness** (see 5.2.3.148).

Informal propositions:

The following additional informal propositions apply:

IP1: Instances of **shape_aspect_relationship** with the **name** ‘arrangement sequence’ are used to specify the order of the constituents composing a course along which a piece of equipment is routed. The **relating_shape_aspect** of such a **shape_aspect_relationship** representing the equipment that is routed along the course shall be either an instance of **connectivity_definition** or an instance of **shape_aspect** that is associated to a **product_definition** with a **name** of either ‘conceptual definition’, ‘functional occurrence’, ‘part occurrence’, or ‘physical occurrence’. The **related_shape_aspect** of such a **shape_aspect_relationship** representing the course constituent shall be an instance of either **free_segment**, or **routed_segment**. The ordering of the course constituents is identified by the **description** (‘first element’, ‘second element’, etc.) of these **shape_aspect_relationships**.

IP2: Instances of **shape_aspect_relationship** with the **name** ‘course sequence’ are used to specify the order of the constituents composing a course represented by a **routed_segment**. Each constituent of the course is associated to the **routed_segment** by such a **shape_aspect_relationship** where the **routed_segment** is the **relating_shape_aspect**. The **related_shape_aspect** representing the constituent shall be an instance of either **installation_node**, **installation_route**, **installation_section**,

ISO 10303-212:2001(E)

or **installation_section_interface**. The ordering of the course constituents is identified by the **description** ('first element', 'second element', etc.) of these **shape_aspect_relationships**.

IP3: Instances of **shape_aspect_relationship** with the **name** 'route course sequence' are used to specify the order of the constituents composing a course represented by an **installation_route**. Each constituent of the course is associated to the **installation_route** by such a **shape_aspect_relationship** where the **installation_route** is the **relating_shape_aspect**. The **related_shape_aspect** representing the constituent shall be an instance of either **installation_node**, **installation_section**, or **installation_section_interface**. The ordering of the course constituents is identified by the **description** ('first element', 'second element', etc.) of these **shape_aspect_relationships**.

5.2.2.2.105 symbol_colour

The base definition of the **symbol_colour** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **symbol_colour** entity:

— **dependent_instantiable_symbol_colour** (see 5.2.3.44).

5.2.2.2.106 text_style_for_defined_font

The base definition of the **text_style_for_defined_font** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **text_style_for_defined_font** entity:

— **dependent_instantiable_text_style_for_defined_font** (see 5.2.3.46).

5.2.2.2.107 text_style

The base definition of the **text_style** entity is given in ISO 10303-46. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **text_style** entity:

— **dependent_instantiable_text_style** (see 5.2.3.45).

5.2.2.2.108 time_interval_role

The base definition of the **time_interval_role** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **time_interval_role** entity:

— **dependent_instantiable_time_interval_role** (see 5.2.3.47).

5.2.2.2.109 type_qualifier

The base definition of the **type_qualifier** entity is given in ISO 10303-42. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **type_qualifier** entity:

— **dependent_instantiable_type_qualifier** (see 5.2.3.48).

5.2.2.2.110 topological_representation_item

The base definition of the **topological_representation_item** entity is given in ISO 10303-42. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **topological_representation_item** entity:

— **representation_item_subtype_exclusiveness** (see 5.2.3.97).

5.2.2.2.111 versioned_action_request

The base definition of the **versioned_action_request** entity is given in ISO 10303-41. The following modifications apply to this part of ISO 10303.

Associated global rules:

The following global rules defined in this part of ISO 10303 apply to the **versioned_action_request** entity:

— **versioned_action_request_requires_date_person_organization**;

— **versioned_action_request_requires_status** (see 5.2.3.162).

5.2.3 electrotechnical_design rule definitions**5.2.3.1 action_subtype_exclusiveness**

The **action_subtype_exclusiveness** rule specifies that each instance of **action** shall be an instance of at most one of its subtypes **executed_action**, or **retention**.

EXPRESS specification:

*)

ISO 10303-212:2001(E)

```
RULE action_subtype_exclusiveness FOR
    (action);
WHERE
    WR1:  SIZEOF(QUERY(a <* action |
                    SIZEOF(TYPEOF(a) *
                    [ 'ELECTROTECHNICAL_DESIGN.EXECUTED_ACTION',
                    'ELECTROTECHNICAL_DESIGN.RETENTION' ]
                    ) > 1 )
    ) = 0;
END_RULE;
(*
```

Argument definitions:

action: the set of all instances of **action** entities.

Formal propositions:

WR1: Each instance of **action** shall be an instance of at most one of its subtypes **executed_action**, or **retention**.

5.2.3.2 application_protocol_definition_required

The **application_protocol_definition_required** rule ensures that at least one **application_protocol_definition** is specified that provides the designator 'electrotechnical_design' of this application protocol.

EXPRESS specification:

```
*)
RULE application_protocol_definition_required FOR
    (application_context);
WHERE
    WR1: SIZEOF ( QUERY ( ac <* application_context | ( SIZEOF (
        QUERY ( apd <* USEDIN ( ac ,
        'ELECTROTECHNICAL_DESIGN.APPLICATION_PROTOCOL_DEFINITION.APPLICATION
        ,
        ) | apd. application_interpreted_model_schema_name
        ='electrotechnical_design' ) ) >0 ) ) ) >0;
END_RULE;
(*
```

Argument definitions:

application_context: the set of all instances of **application_context**.

Formal propositions:

WR1: At least one instance of **application_context** shall be referred by one instance of **application_protocol_definition** which contains the instance of **application_context** as its

application attribute and has a **application_interpreted_model_schema_name** of 'electrotechnical_design'.

5.2.3.3 approval_person_organization_requires_date_time

The **approval_person_organization_requires_date_time** rule specifies that each instance of **approval_person_organization** shall be referenced by exactly one of either **applied_date_assignment** or **applied_date_and_time_assignment** where the assigned date or date and time specifies the sign off date of the approval. This rule enforces the requirement for every Approval (see 4.2.23), that in case the approving person or organization is specified, also the sign off date of the Approval (see 4.2.23) has to be given.

EXPRESS specification:

```
*)
RULE approval_person_organization_requires_date_time FOR
  (approval_person_organization);
WHERE
  WR1: SIZEOF ( QUERY ( apo <* approval_person_organization | (
    SIZEOF ( QUERY ( u <* USEDIN ( apo ,
      'ELECTROTECHNICAL_DESIGN.'+'APPLIED_DATE_ASSIGNMENT.'+ 'ITEMS' )
    |
      ( u.role.name = 'sign off' ) ) ) + SIZEOF ( QUERY (
      u <* USEDIN ( apo ,
        'ELECTROTECHNICAL_DESIGN.'+
        'APPLIED_DATE_AND_TIME_ASSIGNMENT.'+
        'ITEMS' ) | ( u.role.name = 'sign off' ) ) ) ) <>1 ) )
    =0;
END_RULE;
(*
```

Argument definitions:

approval_person_organization: the set of all instances of **approval_person_organization**.

Formal propositions:

WR1: There shall be exactly one instance of either **applied_date_assignment** or **applied_date_and_time_assignment** associated to an **approval_person_organization** where the name of **date_role** / **date_time_role** is 'sign off'.

5.2.3.4 approval_requires_approval_assignment

The **approval_requires_approval_assignment** rule specifies that each instance of **approval** is referenced by at least one instance of **approval_assignment** as the **assigned_approval**. This rule enforces the requirement for every approval to be applied at least once.

EXPRESS specification:

```
*)
RULE approval_requires_approval_assignment FOR
  (approval);
WHERE
```

ISO 10303-212:2001(E)

```
WR1: SIZEOF ( QUERY ( a <* approval | SIZEOF ( USEDIN ( a ,
    'ELECTROTECHNICAL_DESIGN.APPROVAL_ASSIGNMENT.ASSIGNED_APPROVAL'
)
    ) =0 ) ) =0;
END_RULE;
(*
```

Argument definitions:

approval: the set of all instances of **approval**.

Formal propositions:

WR1: Each instance of **approval** shall be referenced at least once as the **assigned_approval** by an instance of **approval_assignment**.

5.2.3.5 assembly_component_usage_reference_designation_constraint

The **assembly_component_usage_reference_designation_constraint** rule constrains the value of the **reference_designator** and the number of associated instances of **object_reference_designation** for instances of **assembly_component_usage**.

EXPRESS specification:

```
*)
RULE assembly_component_usage_reference_designation_constraint FOR
    (assembly_component_usage);
WHERE
    WR1:  SIZEOF(QUERY(assy_rel <*

      'ELECTROTECHNICAL_DESIGN.'+'PRODUCT_RELATED_PRODUCT_CATEGORY.'+
      'PRODUCTS' ) | prpc. name = 'alternative solution' ) ) =1 )
    AND ( SIZEOF ( QUERY ( pd <* USEDIN ( pdf ,
      'ELECTROTECHNICAL_DESIGN.'+'PRODUCT_DEFINITION.'+ 'FORMATION' )
    |
    pd. frame_of_reference.name = 'alternative definition' ) )
    <>1 ) ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

product_definition: the set of all instances of **product_definition**.

product_definition_formation: the set of all instances of **product_definition_formation**.

product_related_product_category: the set of all instances of **product_related_product_category**.

Formal propositions:

WR1: Each instance of **product_definition_formation** which has an associated **of_product** that is referenced by a **product_related_product_category** with a **name** of 'functionality', 'conceptual definition', or 'alternative solution', is referenced as **formation** by exactly one instance of **product_definition** that references as its **frame_of_reference** a **product_definition_context** with a **name** of 'functional definition', 'conceptual definition', or 'alternative definition', respectively.

5.2.3.10 configuration_design_constraint

The **configuration_design_constraint** rule ensures that each instance of **configuration_design** satisfies the **configuration_design_correlation** function that correlates the **names** of a **configuration_design** to elements of product data.

EXPRESS specification:

```
*)
RULE configuration_design_constraint FOR
    (configuration_design);
WHERE
    WR1:  SIZEOF(QUERY(cd <* configuration_design |
                    NOT(configuration_design_correlation(cd)) )
              ) = 0;
END_RULE;
(*
```

Argument definitions:

configuration_design: the set of all instances of the **configuration_design** entity.

Formal propositions:

WR1: For each instance of **configuration_design**, the **configuration_design_correlation** function that correlates the **names** of a **configuration_design** to elements of product data shall be satisfied.

5.2.3.11 curve_font_usage

The **curve_font_usage** rule ensures that each **curve_style_font**, **pre_defined_curve_font**, and **externally_defined_curve_font** shall define the curve font of at least one **curve_style**.

NOTE The definition of this rule is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
RULE curve_font_usage FOR
    (curve_style_font,
```

ISO 10303-212:2001(E)

```
externally_defined_curve_font,  
pre_defined_curve_font);  
WHERE  
WR1: SIZEOF ( QUERY ( csf <* curve_style_font | ( SIZEOF (  
    USEDIN ( csf , 'ELECTROTECHNICAL_DESIGN.CURVE_STYLE.CURVE_FONT'  
    )  
    ) =0 ) ) ) =0;  
WR2: SIZEOF ( QUERY ( pdcf <* pre_defined_curve_font | ( SIZEOF  
    ( USEDIN ( pdcf ,  
    'ELECTROTECHNICAL_DESIGN.CURVE_STYLE.CURVE_FONT' ) ) =0 ) ) )  
=0;  
WR3: SIZEOF ( QUERY ( edcf <* externally_defined_curve_font |  
    NOT ( SIZEOF ( USEDIN ( edcf ,  
    'ELECTROTECHNICAL_DESIGN.'+'CURVE_STYLE.'+ 'CURVE_FONT' ) ) ) >=1  
    )  
    ) ) =0;  
END_RULE;  
(*
```

Argument definitions:

curve_style_font: the set of all instances of the **curve_style_font** entity.

externally_defined_curve_font: the set of all instances of the **externally_defined_curve_font** entity.

pre_defined_curve_font: the set of all instances of the **pre_defined_curve_font** entity.

Formal propositions:

WR1: Each **curve_style_font** shall participate in the definition of at least one **curve_style**.

WR2: Each **externally_defined_curve_font** shall participate in the definition of at least one **curve_style**.

WR3: Each **pre_defined_curve_font** shall participate in the definition of at least one **curve_style**.

5.2.3.12 dependent_instantiable_action_directive

The **dependent_instantiable_action_directive** rule specifies that each instance of **action_directive** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)  
RULE dependent_instantiable_action_directive FOR  
    (action_directive);  
WHERE  
WR1: SIZEOF ( QUERY ( a <* action_directive | NOT ( SIZEOF (  
    USEDIN ( a , '' ) ) ) >0 ) ) ) =0;  
END_RULE;  
(*
```

Argument definitions:

action_directive: identifies the set of all instances of **action_directive**.

Formal propositions:

WR1: For each instance of **action_directive**, there shall be a reference to the **action_directive** instance from an attribute of another entity.

5.2.3.13 dependent_instantiable_address

The **dependent_instantiable_address** rule specifies that all instances of **address** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_address FOR
  (address);
WHERE
  WR1:  SIZEOF(QUERY(a <* address |
                    NOT(SIZEOF(USEDIN (a, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

address: the set of all instances of **address**.

Formal propositions:

WR1: For each instance of **address**, there shall be a reference to the **address** instance from an attribute of another entity.

5.2.3.14 dependent_instantiable_approval_role

The **dependent_instantiable_approval_role** rule specifies that all instances of **approval_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_approval_role FOR
  (approval_role);
WHERE
  WR1:  SIZEOF(QUERY(a <* approval_role |
                    NOT(SIZEOF(USEDIN (a, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

approval_role: the set of all instances of **approval_role**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **approval_role**, there shall be a reference to the **approval_role** instance from an attribute of another entity.

5.2.3.15 **dependent_instantiable_approval_status**

The **dependent_instantiable_approval_status** rule specifies that all instances of **approval_status** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_approval_status FOR
    (approval_status);
WHERE
    WR1:  SIZEOF(QUERY(a <* approval_status |
                    NOT(SIZEOF(USEDIN (a, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

approval_status: the set of all instances of **approval_status**.

Formal propositions:

WR1: For each instance of **approval_status**, there shall be a reference to the **approval_status** instance from an attribute of another entity.

5.2.3.16 **dependent_instantiable_attribute_value_role**

The **dependent_instantiable_attribute_value_role** rule specifies that each instance of **attribute_value_role** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_attribute_value_role FOR
    (attribute_value_role);
WHERE
    WR1:  SIZEOF ( QUERY ( a <* attribute_value_role | NOT ( SIZEOF
                    ( USEDIN ( a , '' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

attribute_value_role: identifies the set of all instances of **attribute_value_role**.

Formal propositions:

WR1: For each instance of **attribute_value_role**, there shall be a reference to the **attribute_value_role** instance from an attribute of another entity.

5.2.3.17 dependent_instantiable_classification_role

The **dependent_instantiable_classification_role** rule specifies that all instances of **classification_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_classification_role FOR
  (classification_role);
WHERE
  WR1: SIZEOF(QUERY(c <* classification_role |
    NOT(SIZEOF(USEDIN (c, 'r')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

classification_role: the set of all instances of **classification_role**.

Formal propositions:

WR1: For each instance of **classification_role**, there shall be a reference to the **classification_role** instance from an attribute of another entity.

5.2.3.18 dependent_instantiable_colour_rgb

The **dependent_instantiable_colour_rgb** rule specifies that each instance of **colour_rgb** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_colour_rgb FOR
  (colour_rgb);
WHERE
  WR1: SIZEOF ( QUERY ( c <* colour_rgb | NOT ( SIZEOF ( USEDIN (
    c , 'r' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

colour_rgb: identifies the set of all instances of **colour_rgb**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **colour_rgb**, there shall be a reference to the **colour_rgb** instance from an attribute of another entity.

5.2.3.19 **dependent_instantiable_curve_style**

The **dependent_instantiable_curve_style** rule specifies that each instance of **curve_style** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_curve_style FOR
    (curve_style);
WHERE
    WR1: SIZEOF ( QUERY ( c <* curve_style | NOT ( SIZEOF ( USEDIN
        ( c , ' ' ) ) > 0 ) ) ) = 0;
END_RULE;
(*
```

Argument definitions:

curve_style: identifies the set of all instances of **curve_style**.

Formal propositions:

WR1: For each instance of **curve_style**, there shall be a reference to the **curve_style** instance from an attribute of another entity.

5.2.3.20 **dependent_instantiable_date**

The **dependent_instantiable_date** rule specifies that all instances of **date** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_date FOR
    (date);
WHERE
    WR1: SIZEOF(QUERY(d <* date |
        NOT(SIZEOF(USEDIN(d, ' ')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

date: the set of all instances of **date**.

Formal propositions:

WR1: For each instance of **date**, there shall be a reference to the **date** instance from an attribute of another entity.

5.2.3.21 dependent_instantiable_date_and_time

The **dependent_instantiable_date_and_time** rule specifies that all instances of **date_and_time** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_date_and_time FOR
  (date_and_time);
WHERE
  WR1:  SIZEOF(QUERY(d <* date_and_time |
                    NOT (SIZEOF(USEDIN(d, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

date_and_time: the set of all instances of **date_and_time**.

Formal propositions:

WR1: For each instance of **date_and_time**, there shall be a reference to the **date_and_time** instance from an attribute of another entity.

5.2.3.22 dependent_instantiable_date_role

The **dependent_instantiable_date_role** rule specifies that all instances of **date_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_date_role FOR
  (date_role);
WHERE
  WR1:  SIZEOF(QUERY(d <* date_role |
                    NOT (SIZEOF(USEDIN(d, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

date_role: the set of all instances of **date_role**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **date_role**, there shall be a reference to the **date_role** instance from an attribute of another entity.

5.2.3.23 **dependent_instantiable_date_time_role**

The **dependent_instantiable_date_time_role** rule specifies that all instances of **date_time_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_date_time_role FOR
    (date_time_role);
WHERE
    WR1:  SIZEOF(QUERY(d <* date_time_role |
                    NOT (SIZEOF(USEDIN(d, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

date_time_role: the set of all instances of **date_time_role**.

Formal propositions:

WR1: For each instance of **date_time_role**, there shall be a reference to the **date_time_role** instance from an attribute of another entity.

5.2.3.24 **dependent_instantiable_derived_unit**

The **dependent_instantiable_derived_unit** rule specifies that all instances of **derived_unit** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_derived_unit FOR
    (derived_unit);
WHERE
    WR1:  SIZEOF(QUERY(d <* derived_unit |
                    NOT (SIZEOF(USEDIN (d, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

derived_unit: the set of all instances of **derived_unit**.

Formal propositions:

WR1: For each instance of **derived_unit**, there shall be a reference to the **derived_unit** instance from an attribute of another entity.

5.2.3.25 dependent_instantiable_document_usage_role

The **dependent_instantiable_document_usage_role** rule specifies that all instances of **document_usage_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_document_usage_role FOR
  (document_usage_role);
WHERE
  WR1:  SIZEOF(QUERY(d <* document_usage_role |
                    NOT(SIZEOF(USEDIN(d, 'r')) > 0))) = 0;
END_RULE;
(*
```

Argument definitions:

document_usage_role: the set of all instances of **document_usage_role**.

Formal propositions:

WR1: For each instance of **document_usage_role**, there shall be a reference to the **document_usage_role** instance from an attribute of another entity.

5.2.3.26 dependent_instantiable_externally_defined_symbol

The **dependent_instantiable_externally_defined_symbol** rule specifies that each instance of **externally_defined_symbol** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_externally_defined_symbol FOR
  (externally_defined_symbol);
WHERE
  WR1:  SIZEOF ( QUERY ( e <* externally_defined_symbol | NOT (
                    SIZEOF ( USEDIN ( e , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

externally_defined_symbol: identifies the set of all instances of **externally_defined_symbol**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **externally_defined_symbol**, there shall be a reference to the **externally_defined_symbol** instance from an attribute of another entity.

5.2.3.27 **dependent_instantiable_fill_area_style**

The **dependent_instantiable_fill_area_style** rule specifies that each instance of **fill_area_style** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_fill_area_style FOR
    (fill_area_style);
WHERE
    WR1: SIZEOF ( QUERY ( f <* fill_area_style | NOT ( SIZEOF (
        USEDIN ( f , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

fill_area_style: identifies the set of all instances of **fill_area_style**.

Formal propositions:

WR1: For each instance of **fill_area_style**, there shall be a reference to the **fill_area_style** instance from an attribute of another entity.

5.2.3.28 **dependent_instantiable_fill_area_style_colour**

The **dependent_instantiable_fill_area_style_colour** rule specifies that each instance of **fill_area_style_colour** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_fill_area_style_colour FOR
    (fill_area_style_colour);
WHERE
    WR1: SIZEOF ( QUERY ( f <* fill_area_style_colour | NOT (
        SIZEOF ( USEDIN ( f , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

fill_area_style_colour: identifies the set of all instances of **fill_area_style_colour**.

Formal propositions:

WR1: For each instance of **fill_area_style_colour**, there shall be a reference to the **fill_area_style_colour** instance from an attribute of another entity.

5.2.3.29 dependent_instantiable_identification_role

The **dependent_instantiable_identification_role** rule specifies that all instances of **identification_role** are dependent on the usage to define another entity.

EXPRESS specification:

```

*)
RULE dependent_instantiable_identification_role FOR
  (identification_role);
WHERE
  WR1:  SIZEOF(QUERY(i <* identification_role |
                    NOT(SIZEOF(USEDIN (i, 'r')) > 0 ))) = 0;
END_RULE;
(*

```

Argument definitions:

identification_role: the set of all instances of **identification_role**.

Formal propositions:

WR1: For each instance of **identification_role**, there shall be a reference to the **identification_role** instance from an attribute of another entity.

5.2.3.30 dependent_instantiable_measure_with_unit

The **dependent_instantiable_measure_with_unit** rule specifies that all instances of **measure_with_unit** are dependent on the usage to define another entity.

EXPRESS specification:

```

*)
RULE dependent_instantiable_measure_with_unit FOR
  (measure_with_unit);
WHERE
  WR1:  SIZEOF(QUERY(m <* measure_with_unit |
                    NOT(SIZEOF(USEDIN (m, 'r')) > 0 ))) = 0;
END_RULE;
(*

```

Argument definitions:

measure_with_unit: the set of all instances of **measure_with_unit**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **measure_with_unit**, there shall be a reference to the **measure_with_unit** instance from an attribute of another entity.

5.2.3.31 **dependent_instantiable_named_unit**

The **dependent_instantiable_named_unit** rule specifies that all instances of **named_unit** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_named_unit FOR
    (named_unit);
WHERE
    WR1:  SIZEOF(QUERY(n <* named_unit |
                        NOT(SIZEOF(USEDIN(n, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

named_unit: Identifies the set of all instances of **named_unit**.

Formal propositions:

WR1: For each instance of **named_unit**, there shall be a reference to the **named_unit** instance from an attribute of another entity.

5.2.3.32 **dependent_instantiable_object_role**

The **dependent_instantiable_object_role** rule specifies that all instances of **object_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_object_role FOR
    (object_role);
WHERE
    WR1:  SIZEOF(QUERY(o <* object_role |
                        NOT(SIZEOF(USEDIN(o, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

object_role: the set of all instances of **object_role**.

Formal propositions:

WR1: For each instance of **object_role**, there shall be a reference to the **object_role** instance from an attribute of another entity.

5.2.3.33 dependent_instantiable_organization_role

The **dependent_instantiable_organization_role** rule specifies that all instances of **organization_role** are dependent on the usage to define another entity.

EXPRESS specification:

```

*)
RULE dependent_instantiable_organization_role FOR
  (organization_role);
WHERE
  WR1:  SIZEOF(QUERY(o <* organization_role |
                NOT(SIZEOF(USEDIN(o, 'T')) > 0 ))) = 0;
END_RULE;
(*

```

Argument definitions:

organization_role: Identifies the set of all instances of **organization_role**.

Formal propositions:

WR1: For each instance of **organization_role**, there shall be a reference to the **organization_role** instance from an attribute of another entity.

5.2.3.34 dependent_instantiable_organizational_project_role

The **dependent_instantiable_organizational_project_role** rule specifies that each instance of **organizational_project_role** is dependent on the usage to define another entity.

EXPRESS specification:

```

*)
RULE dependent_instantiable_organizational_project_role FOR
  (organizational_project_role);
WHERE
  WR1:  SIZEOF ( QUERY ( o <* organizational_project_role | NOT (
                SIZEOF ( USEDIN ( o , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*

```

Argument definitions:

organizational_project_role: identifies the set of all instances of **organizational_project_role**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **organizational_project_role**, there shall be a reference to the **organizational_project_role** instance from an attribute of another entity.

5.2.3.35 **dependent_instantiable_person**

The **dependent_instantiable_person** rule specifies that all instances of **person** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_person FOR
    (person);
WHERE
    WR1:  SIZEOF(QUERY(p <* person |
                    NOT (SIZEOF(USEDIN(p, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

person: Identifies the set of all instances of **person**.

Formal propositions:

WR1: For each instance of **person**, there shall be a reference to the **person** instance from an attribute of another entity.

5.2.3.36 **dependent_instantiable_person_and_organization_role**

The **dependent_instantiable_person_and_organization_role** rule specifies that all instances of **person_and_organization_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_person_and_organization_role FOR
    (person_and_organization_role);
WHERE
    WR1:  SIZEOF(QUERY(p <* person_and_organization_role |
                    NOT (SIZEOF(USEDIN(p, '')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

person_and_organization_role: Identifies the set of all instances of **person_and_organization_role**.

Formal propositions:

WR1: For each instance of **person_and_organization_role**, there shall be a reference to the **person_and_organization_role** instance from an attribute of another entity.

5.2.3.37 dependent_instantiable_pre_defined_colour

The **dependent_instantiable_pre_defined_colour** rule specifies that each instance of **pre_defined_colour** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_pre_defined_colour FOR
  (pre_defined_colour);
WHERE
  WR1: SIZEOF ( QUERY ( p <* pre_defined_colour | NOT ( SIZEOF (
    USEDIN ( p , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

pre_defined_colour: identifies the set of all instances of **pre_defined_colour**.

Formal propositions:

WR1: For each instance of **pre_defined_colour**, there shall be a reference to the **pre_defined_colour** instance from an attribute of another entity.

5.2.3.38 dependent_instantiable_pre_defined_symbol

The **dependent_instantiable_pre_defined_symbol** rule specifies that each instance of **pre_defined_symbol** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_pre_defined_symbol FOR
  (pre_defined_symbol);
WHERE
  WR1: SIZEOF ( QUERY ( p <* pre_defined_symbol | NOT ( SIZEOF (
    USEDIN ( p , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

pre_defined_symbol: identifies the set of all instances of **pre_defined_symbol**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **pre_defined_symbol**, there shall be a reference to the **pre_defined_symbol** instance from an attribute of another entity.

5.2.3.39 dependent_instantiable_precision_qualifier

The **dependent_instantiable_precision_qualifier** rule specifies that each instance of **precision_qualifier** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_precision_qualifier FOR
    (precision_qualifier);
WHERE
    WR1: SIZEOF ( QUERY ( p <* precision_qualifier | NOT ( SIZEOF (
        USEDIN ( p , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

precision_qualifier: identifies the set of all instances of **precision_qualifier**.

Formal propositions:

WR1: For each instance of **precision_qualifier**, there shall be a reference to the **precision_qualifier** instance from an attribute of another entity.

5.2.3.40 dependent_instantiable_presentation_style_by_context

The **dependent_instantiable_presentation_style_by_context** rule specifies that each instance of **presentation_style_by_context** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_presentation_style_by_context FOR
    (presentation_style_by_context);
WHERE
    WR1: SIZEOF ( QUERY ( p <* presentation_style_by_context | NOT
        ( SIZEOF ( USEDIN ( p , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

presentation_style_by_context: identifies the set of all instances of **presentation_style_by_context**.

Formal propositions:

WR1: For each instance of **presentation_style_by_context**, there shall be a reference to the **presentation_style_by_context** instance from an attribute of another entity.

5.2.3.41 dependent_instantiable_product_definition_context_role

The **dependent_instantiable_product_definition_context_role** rule specifies that each instance of **product_definition_context_role** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_product_definition_context_role FOR
    (product_definition_context_role);
WHERE
    WR1: SIZEOF ( QUERY ( p <* product_definition_context_role |
        NOT ( SIZEOF ( USEDIN ( p , '' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

product_definition_context_role: identifies the set of all instances of **product_definition_context_role**.

Formal propositions:

WR1: For each instance of **product_definition_context_role**, there shall be a reference to the **product_definition_context_role** instance from an attribute of another entity.

5.2.3.42 dependent_instantiable_retention

The **dependent_instantiable_retention** rule specifies that each instance of **retention** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_retention FOR
    (retention);
WHERE
    WR1: SIZEOF ( QUERY ( r <* retention | NOT ( SIZEOF ( USEDIN (
        r , '' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

retention: identifies the set of all instances of **retention**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: For each instance of **retention**, there shall be a reference to the **retention** instance from an attribute of another entity.

5.2.3.43 **dependent_instantiable_security_classification_level**

The **dependent_instantiable_security_classification_level** rule specifies that all instances of **security_classification_level** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_security_classification_level FOR
    (security_classification_level);
WHERE
    WR1:  SIZEOF(QUERY(s <* security_classification_level |
        NOT(SIZEOF(USEDIN(s, '')) > 0))) = 0;
END_RULE;
(*
```

Argument definitions:

security_classification_level: the set of all instances of **security_classification_level**.

Formal propositions:

WR1: For each instance of **security_classification_level**, there shall be a reference to the **security_classification_level** instance from an attribute of another entity.

5.2.3.44 **dependent_instantiable_symbol_colour**

The **dependent_instantiable_symbol_colour** rule specifies that each instance of **symbol_colour** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_symbol_colour FOR
    (symbol_colour);
WHERE
    WR1:  SIZEOF ( QUERY ( s <* symbol_colour | NOT ( SIZEOF (
        USEDIN ( s , '' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

symbol_colour: identifies the set of all instances of **symbol_colour**.

Formal propositions:

WR1: For each instance of **symbol_colour**, there shall be a reference to the **symbol_colour** instance from an attribute of another entity.

5.2.3.45 dependent_instantiable_text_style

The **dependent_instantiable_text_style** rule specifies that each instance of **text_style** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_text_style FOR
    (text_style);
WHERE
    WR1: SIZEOF ( QUERY ( t <* text_style | NOT ( SIZEOF ( USEDIN (
        t , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

text_style: identifies the set of all instances of **text_style**.

Formal propositions:

WR1: For each instance of **text_style**, there shall be a reference to the **text_style** instance from an attribute of another entity.

5.2.3.46 dependent_instantiable_text_style_for_defined_font

The **dependent_instantiable_text_style_for_defined_font** rule specifies that each instance of **text_style_for_defined_font** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_text_style_for_defined_font FOR
    (text_style_for_defined_font);
WHERE
    WR1: SIZEOF ( QUERY ( t <* text_style_for_defined_font | NOT (
        SIZEOF ( USEDIN ( t , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

text_style_for_defined_font: identifies the set of all instances of **text_style_for_defined_font**.

Formal propositions:

WR1: For each instance of **text_style_for_defined_font**, there shall be a reference to the **text_style_for_defined_font** instance from an attribute of another entity.

5.2.3.47 dependent_instantiable_time_interval_role

The **dependent_instantiable_time_interval_role** rule specifies that all instances of **time_interval_role** are dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_time_interval_role FOR
    (time_interval_role);
WHERE
    WR1:  SIZEOF(QUERY(t <* time_interval_role |
                    NOT(SIZEOF(USEDIN(t, ' ')) > 0 ))) = 0;
END_RULE;
(*
```

Argument definitions:

time_interval_role: the set of all instances of **time_interval_role**.

Formal propositions:

WR1: For each instance of **time_interval_role**, there shall be a reference to the **time_interval_role** instance from an attribute of another entity.

5.2.3.48 dependent_instantiable_type_qualifier

The **dependent_instantiable_type_qualifier** rule specifies that each instance of **type_qualifier** is dependent on the usage to define another entity.

EXPRESS specification:

```
*)
RULE dependent_instantiable_type_qualifier FOR
    (type_qualifier);
WHERE
    WR1:  SIZEOF ( QUERY ( t <* type_qualifier | NOT ( SIZEOF (
                    USEDIN ( t , ' ' ) ) >0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

type_qualifier: identifies the set of all instances of **type_qualifier**.

Formal propositions:

WR1: For each instance of **type_qualifier**, there shall be a reference to the **type_qualifier** instance from an attribute of another entity.

5.2.3.49 dimensionality_is_two_or_three

The **dimensionality_is_two_or_three** rule ensures that all **representations** with an associated **geometric_representation_context** are defined in a twodimensional or threedimensional coordinate system.

EXPRESS specification:

```

*)
RULE dimensionality_is_two_or_three FOR
  (geometric_representation_context);
WHERE
  WR1:  SIZEOF(QUERY(g <* geometric_representation_context |
                    NOT((g.coordinate_space_dimension = 2)
                       OR
                       (g.coordinate_space_dimension = 3))
                    )) = 0;
END_RULE;
(*

```

Argument definitions:

geometric_representation_context: the set of all instances of **geometric_representation_context**.

Formal Propositions:

WR1: Each **geometric_representation_context** shall have a **coordinate_space_dimension** equal to two or three.

5.2.3.50 draughting_model_annotation_layers

The **draughting_model_annotation_layers** rule ensures that every **annotation_occurrence** that is an item in a draughting model is assigned to at least one layer.

EXPRESS specification:

```

*)
RULE draughting_model_annotation_layers FOR
  (presentation_representation);
WHERE
  WR1:  SIZEOF(QUERY(pr <* presentation_representation |
                    NOT(SIZEOF(QUERY(ao <* QUERY(it <* pr\representation.items
                    |
                    ('ELECTROTECHNICAL_DESIGN.ANNOTATION_OCCURRENCE'
                    IN TYPEOF(it))) |
                    NOT(SIZEOF(USEDIN(ao, 'ELECTROTECHNICAL_DESIGN.' +
                    'PRESENTATION_LAYER_ASSIGNMENT.'
                    +
                    'ASSIGNED_ITEMS')) >= 1)
                    )) = 0)
                    )) = 0;
END_RULE;
(*

```

ISO 10303-212:2001(E)

Argument definitions:

presentation_representation: the set of all instances of the **presentation_representation** entity.

Formal propositions:

WR1: Every item of each **presentation_representation** that is an **annotation_occurrence** shall be one of the **assigned_items** of at least one **presentation_layer_assignment**.

5.2.3.51 draughting_subfigure_representation_layers

The **draughting_subfigure_representation_layers** rule ensures that every **annotation_occurrence** that is an item in a **draughting_subfigure_representation** is assigned to at least one layer.

NOTE The definition of this rule is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
RULE draughting_subfigure_representation_layers FOR
  (draughting_subfigure_representation);
WHERE
  WR1: SIZEOF(QUERY(dsr <* draughting_subfigure_representation |
    NOT(SIZEOF(QUERY (item <* dsr\representation.items |
      ('ELECTROTECHNICAL_DESIGN.ANNOTATION_OCCURRENCE'
        IN TYPEOF(item))
      AND
        (SIZEOF(USEDIN(item, 'ELECTROTECHNICAL_DESIGN.' +
          'PRESENTATION_LAYER_ASSIGNMENT.'
          +
            'ASSIGNED_ITEMS')) = 0 )
        )) = 0 )
    )) = 0;
END_RULE;
(*
```

Argument definitions:

draughting_subfigure_representation: the set of all instances of the **draughting_subfigure_representation** entity.

Formal propositions:

WR1: Every item of each **draughting_subfigure_representation** that is an **annotation_occurrence** shall be one of the **assigned_items** of at least one **presentation_layer_assignment**.

5.2.3.52 drawing_revision_document_designation_constraint

The **drawing_revision_document_designation_constraint** rule ensures that each instance of **drawing_revision** is referenced only by instances of **item_designation_assignment** that are not instances of **object_reference_designation_assignment**, **signal_designation_assignment**, or **terminal_designation_assignment**. At most one instance of **document_designation_assignment**

that has an associated **identification_role** with a **description** of 'primary' shall reference each instance of **drawing_revision**.

EXPRESS specification:

```

*)
RULE drawing_revision_document_designation_constraint FOR
  (drawing_revision);
WHERE
  WR1:  SIZEOF(QUERY(d <* drawing_revision |
                    SIZEOF(QUERY(des <* USEDIN(d,
                                'ELECTROTECHNICAL_DESIGN.' +
                                'ITEM_DESIGNATION_ASSIGNMENT.'
+
                                'ITEMS') |
                    SIZEOF(TYPEOF(des) *
                    ['ELECTROTECHNICAL_DESIGN.' +
'OBJECT_REFERENCE_DESIGNATION_ASSIGNMENT',
                    'ELECTROTECHNICAL_DESIGN.' +
                    'SIGNAL_DESIGNATION_ASSIGNMENT',
                    'ELECTROTECHNICAL_DESIGN.' +
                    'TERMINAL_DESIGNATION_ASSIGNMENT']
                    ) > 0 )
                    ) > 0 )
        ) = 0;
  WR2:  SIZEOF(QUERY(d <* drawing_revision |
                    SIZEOF(QUERY(des <* USEDIN(d,
                                'ELECTROTECHNICAL_DESIGN.' +

    'ELECTROTECHNICAL_DESIGN.'+'RELATIVE_EVENT_OCCURRENCE.'+
    'BASE_EVENT' ) ) =0 ) AND ( SIZEOF ( USEDIN ( eo ,
    'ELECTROTECHNICAL_DESIGN.'+'EVENT_OCCURRENCE_ASSIGNMENT.'+

```

```

    'ASSIGNED_EVENT_OCCURRENCE' ) ) =0 ) ) ) =0;
END_RULE;
(*)

```

Argument definitions:

event_occurrence: the set of all instances of **event_occurrence**.

event_occurrence_assignment: the set of all instances of **event_occurrence_assignment**.

relative_event_occurrence: the set of all instances of **relative_event_occurrence**.

Formal propositions:

WR1: Each **event_occurrence** that is not used as a **base_event** by an instance of **relative_event_occurrence** shall be used at least once as the **assigned_event_occurrence** of an instance of **event_occurrence_assignment**.

5.2.3.60 executed_action_requires_status

The **executed_action_requires_status** rule ensures that each instance of **executed_action** is referenced by exactly one instance of the **action_status** entity.

EXPRESS specification:

```

*)
RULE executed_action_requires_status FOR
    (executed_action);
WHERE
    WR1: SIZEOF ( QUERY ( ea <* executed_action | SIZEOF ( USEDIN (
        ea , 'ELECTROTECHNICAL_DESIGN.'+'ACTION_STATUS.'+'
        'ASSIGNED_ACTION' ) ) <>1 ) ) ) =0;
END_RULE;
(*)

```

Argument definitions:

executed_action: the set of all instances of **executed_action** entities.

Formal propositions:

WR1: Each instance of **executed_action** shall be referenced by exactly one instance of **action_status** as the **assigned_action**.

5.2.3.61 externally_defined_class_with_known_source_requirement

The **externally_defined_class_with_known_source_requirement** rule specifies that each instance of **externally_defined_class** which references as the **source** a **known_source** is contained in the set of **items** of exactly one **applied_organization_assignment** which references as its **role** an **organization_role** with a **name** of 'class supplier'. This rule enforces the requirement for every **class_reference** to have a **supplier**.

ISO 10303-212:2001(E)

EXPRESS specification:

```
*)
RULE externally_defined_class_with_known_source_requirement FOR
    (externally_defined_class);
WHERE
    WR1: SIZEOF ( QUERY ( edc <* externally_defined_class | (

        source ) ) AND ( SIZEOF ( QUERY ( aoa <* USEDIN ( edc ,
        'ELECTROTECHNICAL_DESIGN.APPLIED_ORGANIZATION_ASSIGNMENT.ITEMS'
    )
        | aoa. role.name = 'class supplier' ) ) =0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

externally_defined_class: the set of all instances of **externally_defined_class**.

Formal propositions:

WR1: Each instance of **externally_defined_class** which references as the **source** a **known_source** shall be member in the set of **items** of an **applied_organization_assignment**. This **organization_assignment** shall reference as its **role** an **organization_role** with a **name** of 'class supplier'.

5.2.3.62 externally_defined_item_relationship_constraint

The **externally_defined_item_relationship_constraint** rule ensures that each instance of **externally_defined_item_relationship** satisfies the **externally_defined_item_relationship_correlation** function that correlates the **names** of a **externally_defined_item_relationship** to elements of product data.

EXPRESS specification:

```
*)
RULE externally_defined_item_relationship_constraint FOR
    (externally_defined_item_relationship);
WHERE
    WR1: SIZEOF(QUERY(e <* externally_defined_item_relationship |
        NOT(externally_defined_item_relationship_correlation(e)) )
    ) = 0;
END_RULE;
(*
```

Argument definitions:

externally_defined_item_relationship: the set of all instances of the **externally_defined_item_relationship** entity.

Formal propositions:

WR1: For each instance of **externally_defined_item_relationship**, the **externally_defined_item_relationship_correlation** function that correlates the names of a **externally_defined_item_relationship** to elements of product data shall be satisfied.

5.2.3.63 externally_defined_item_subtype_exclusiveness

The **externally_defined_item_subtype_exclusiveness** rule specifies that each instance of **externally_defined_item** shall be an instance of at most one of its subtypes **externally_defined_class**, **externally_defined_curve_font**, **externally_defined_general_property**, **externally_defined_hatch_style**, **externally_defined_symbol**, **externally_defined_text_font**, or **externally_defined_tile_style**.

EXPRESS specification:

```

*)
RULE externally_defined_item_subtype_exclusiveness FOR
    (externally_defined_item);
WHERE
    WR1:  SIZEOF(QUERY(e <* externally_defined_item |
                SIZEOF(TYPEOF(e) *
                    ['ELECTROTECHNICAL_DESIGN.' +

'ELECTROTECHNICAL_DESIGN.'+ 'PRESENTATION_VIEW'] ) =1 ) ) ) =0
)
) ) =0 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

presentation_layer_assignment: the set of all instances of **presentation_layer_assignment**.

Formal propositions:

WR1: Every **point** that is one of the **assigned_items** of a **presentation_layer_assignment** shall also be a member of the set of **items** of a **shape_representation**.

WR2: Every **curve** that is one of the **assigned_items** of a **presentation_layer_assignment** shall also be a member of the set of **items** of a **shape_representation**.

WR3: Every **annotation_occurrence** that is one of the **assigned_items** of a **presentation_layer_assignment** shall also be a member of the set of **items** of an **draughting_subfigure_representation**, **draughting_model**, **presentation_area**, or **presentation_view**.

5.2.3.77 presentation_size_constraint

The **presentation_size_constraint** rule ensures that each **presentation_size** is used only to specify the size of a **drawing_sheet_revision**.

NOTE The definition of this rule is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
RULE presentation_size_constraint FOR
(presentation_size);
WHERE
WR1: SIZEOF(QUERY(ps <* presentation_size |
```

```

NOT('ELECTROTECHNICAL_DESIGN.DRAWING_SHEET_REVISION'
    IN TYPEOF(ps.unit))) = 0;
END_RULE;
(*

```

Argument definitions:

presentation_size: the set of all instances of the **presentation_size** entity.

Formal propositions:

WR1: Each **presentation_size** shall specify a **drawing_sheet_revision** as the **unit**.

5.2.3.78 presentation_style_by_context_constraint

The **presentation_style_by_context_constraint** rule specifies that only **presentation_view** provides a context for the assignment of style and that exactly one style is assigned within the context.

NOTE The definition of this rule is identical to the definition in ISO 10303-202.

EXPRESS specification:

```

*)
RULE presentation_style_by_context_constraint FOR
    (presentation_style_by_context);
WHERE
    WR1: SIZEOF(QUERY(psbcc <* presentation_style_by_context |
        NOT('ELECTROTECHNICAL_DESIGN.PRESENTATION_VIEW'
            IN TYPEOF(psbcc.style_context))
        )) = 0;
    WR2: SIZEOF(QUERY(psbcc <* presentation_style_by_context |
        NOT(SIZEOF(psbcc.presentation_style_assignment.styles) = 1)
        )) = 0;
END_RULE;
(*

```

Argument definitions:

presentation_style_by_context: the set of all instances of the **presentation_style_by_context** entity.

Formal propositions:

WR1: The **style_context** of each **presentation_style_by_context** shall be **presentation_view**.

WR2: Each **presentation_style_by_context** shall assign exactly one style.

5.2.3.79 presentation_view_presented_once

The **presentation_view_presented_once** rule ensures that a **presentation_view** is presented in a **drawing_sheet_revision**.

ISO 10303-212:2001(E)

NOTE The definition of this rule is identical to the definition in ISO 10303-202.

EXPRESS specification:

```
*)
RULE presentation_view_presented_once FOR
  (drawing_sheet_revision,
   presentation_view);
WHERE
  WR1: SIZEOF(QUERY(pv <* presentation_view |

  WR1: SIZEOF(QUERY(p <* presented_item |
    SIZEOF(TYPEOF(p) *
    ['ELECTROTECHNICAL_DESIGN.' +
    'APPLIED_PRESENTED_ITEM',
    'ELECTROTECHNICAL_DESIGN.' +
    'DRAUGHTING_PRESENTED_ITEM']
    ) > 1 )
  ) = 0;
END_RULE;
```

(*

Argument definitions:

presented_item: the set of all instances of **presented_item** entities.

Formal propositions:

WR1: Each instance of **presented_item** shall be an instance of at most one of its subtypes **applied_presented_item** or **draughting_presented_item**.

5.2.3.81 product_concept_feature_requires_category

The **product_concept_feature_requires_category** rule specifies that each instance of **product_concept_feature** is contained in the set of **items** of exactly one **applied_group_assignment** which has as the **role** an **object_role** with a **name** of 'specification category member' and which references as the **assigned_group** a **product_concept_feature_category**. This rule enforces the requirement for every **specification** to have one **Specification_category** (see 4.2.324).

EXPRESS specification:

```

*)
RULE product_concept_feature_requires_category FOR
  (product_concept_feature,
   product_concept_feature_category);
WHERE
  WR1: SIZEOF ( QUERY ( pcf <* product_concept_feature | SIZEOF (
    QUERY ( aga <* USEDIN ( pcf ,
      'ELECTROTECHNICAL_DESIGN.'+'APPLIED_GROUP_ASSIGNMENT.'+ 'ITEMS '
    )
    | ( aga.role.name = 'specification category member' ) AND
      ( 'ELECTROTECHNICAL_DESIGN.'+
        'PRODUCT_CONCEPT_FEATURE_CATEGORY'
        IN TYPEOF ( aga.assigned_group ) ) ) ) <>1 ) ) =0;
END_RULE;
(*

```

Argument definitions:

product_concept_feature: the set of all instances of **product_concept_feature**.

product_concept_feature_category: the set of all instances of **product_concept_feature_category**.

Formal propositions:

WR1: Each instance of **product_concept_feature** is contained in the set of **items** of exactly one **applied_group_assignment** which has as the **role** an **object_role** with a **name** of 'specification category member' and which references as the **assigned_group** a **product_concept_feature_category**.

5.2.3.82 product_definition_constraint

The **product_definition_constraint** rule ensures that each instance of **product_definition** satisfies the **product_definition_correlation** function that correlates the **names** of a **product_definition** as well as the **names** of the **application_context_element** associated to a **product_definition** to elements of product data.

EXPRESS specification:

```

*)
RULE product_definition_constraint FOR
  (product_definition);
WHERE
  WR1:  SIZEOF(QUERY(p <* product_definition |
                NOT(product_definition_correlation(p)) )
          ) = 0;
END_RULE;
(*

```

Argument definitions:

product_definition: the set of all instances of the **product_definition** entity.

Formal propositions:

WR1: For each instance of **product_definition**, the **product_definition_correlation** function that correlates the **names** of a **product_definition** as well as the **names** of the **application_context_element** associated to a **product_definition** to elements of product data shall be satisfied.

5.2.3.83 product_definition_context_association_constraint

The **product_definition_context_association_constraint** rule ensures that each instance of **product_definition_context_association** satisfies the **product_definition_context_association_correlation** function that correlates the **names** of a **product_definition_context_association** to elements of product data.

EXPRESS specification:

```

*)
RULE product_definition_context_association_constraint FOR
  (product_definition_context_association);

      'ELECTROTECHNICAL_DESIGN.'+ 'KNOWN_SOURCE' IN TYPEOF ( edgp.
      source ) ) AND ( SIZEOF ( QUERY ( edir <* USEDIN ( edgp ,
      'ELECTROTECHNICAL_DESIGN.'+'EXTERNALLY_DEFINED_ITEM_RELATIONSHIP.'+
      'RELATING_ITEM' ) | ( edir. name = 'name_scope' ) AND (
      'ELECTROTECHNICAL_DESIGN.'+ 'EXTERNALLY_DEFINED_CLASS' IN
      TYPEOF
      ( edir. related_item ) ) AND ( 'ELECTROTECHNICAL_DESIGN.'+
      'KNOWN_SOURCE' IN TYPEOF ( edir. related_item.source ) ) )
      ) <>1 ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

externally_defined_general_property: the set of all instances of **externally_defined_general_property**.

Formal propositions:

WR1: Each instance of **externally_defined_general_property** that has as its source a **known_source** is referenced as the **relating_item** by exactly one instance of **externally_defined_item_relationship** which has a **name** of 'name_scope' and which references as the **related_item** an **externally_defined_class** that has as its source a **known_source**.

5.2.3.93 property_reference_requires_version

The **property_reference_requires_version** rule specifies that each instance of **externally_defined_general_property** that has as its source a **known_source** is contained in the set of **items** of exactly one **applied_external_identification_assignment** which references as its **role** an **identification_role** with a **name** of 'version'. This rule enforces the requirement for every **Property_reference** (see 4.2.275) to have a version.

EXPRESS specification:

```
*)
RULE property_reference_requires_version FOR
  (externally_defined_general_property);
WHERE
  WR1: SIZEOF ( QUERY ( edgp <*
    externally_defined_general_property | (
      'ELECTROTECHNICAL_DESIGN.'+ 'KNOWN_SOURCE' IN TYPEOF ( edgp.
      source ) ) AND ( SIZEOF ( QUERY ( edir <* USEDIN ( edgp ,
      'ELECTROTECHNICAL_DESIGN.'+
      'APPLIED_EXTERNAL_IDENTIFICATION_ASSIGNMENT.'+
      'ITEMS' ) | ( edir. role.name = 'version' ) ) ) <>1 ) ) )
```

```

    =0;
END_RULE;
(*

```

Argument definitions:

externally_defined_general_property: the set of all instances of **externally_defined_general_property**.

Formal propositions:

WR1: Each instance of **externally_defined_general_property** that has as its **source** a **known_source** is contained in the set of **items** of exactly one **applied_external_identification_assignment** which references as its **role** an **identification_role** with a **name** of 'version'.

5.2.3.94 reference_grid_layout_usage

The **reference_grid_layout_usage** rule ensures that a **reference_grid_layout** is mapped as one of the items of either a **drawing_sheet_revision** or a **presentation_view**.

EXPRESS specification:

```

*)
RULE reference_grid_layout_usage FOR
    (mapped_item);
WHERE
    WR1:  SIZEOF(QUERY(rgl <* QUERY(mi <* mapped_item |
        'ELECTROTECHNICAL_DESIGN.' +
        'REFERENCE_GRID_LAYOUT'
        IN
        TYPEOF(mi\mapped_item.mapping_source.
            mapped_representation) ) |
        NOT(SIZEOF(USEDIN(rgl, ''))
            =
            SIZEOF(QUERY(items <* USEDIN(rgl,
                'ELECTROTECHNICAL_DESIGN.' +
                'REPRESENTATION.' +
                'ITEMS') |
                SIZEOF(TYPEOF(items) *
                ['ELECTROTECHNICAL_DESIGN.' +
                'DRAWING_SHEET_REVISION',
                'ELECTROTECHNICAL_DESIGN.' +
                'PRESENTATION_VIEW']
            ) = 1 ) ) ) )
    ) = 0;
END_RULE;
(*

```

Argument definitions:

mapped_item: the set of all instances of the **mapped_item** entity.

ISO 10303-212:2001(E)

Formal propositions:

WR1: Each **mapped_item** that is the mapping of a **reference_grid_layout** shall be one of the items in either a **drawing_sheet_revision** or a **presentation_view**.

5.2.3.95 **representation_constraint**

The **representation_constraint** (see 5.2.3.95) rule ensures that each instance of **representation** satisfies the **representation_correlation** function that correlates the **names** of a **representation** to elements of product data.

EXPRESS specification:

```
*)
RULE representation_constraint FOR
  (representation);
WHERE
  WR1:  SIZEOF(QUERY(r <* representation |
                    NOT(representation_correlation(r)) )
            ) = 0;
END_RULE;
(*
```

Argument definitions:

representation: the set of all instances of the **representation** entity.

Formal propositions:

WR1: For each instance of **representation**, the **representation_correlation** function that correlates the **names** of a **representation** to elements of product data shall be satisfied.

5.2.3.96 **representation_item_constraint**

The **representation_item_constraint** rule ensures that each instance of **representation_item** satisfies the **representation_item_correlation** function that correlates the **names** of a **representation_item** to elements of product data.

EXPRESS specification:

```
*)
RULE representation_item_constraint FOR
  (representation_item);
WHERE
  WR1:  SIZEOF(QUERY(r <* representation_item |
                    NOT(representation_item_correlation(r)) )
            ) = 0;
END_RULE;
(*
```

Argument definitions:

representation_item: the set of all instances of the **representation_item** entity.

Formal propositions:

WR1: For each instance of **representation_item**, the **representation_item_correlation** function that correlates the **names** of a **representation_item** to elements of product data shall be satisfied.

5.2.3.97 representation_item_subtype_exclusiveness

The **representation_item_subtype_exclusiveness** rule specifies constraints restricting the complex instantiations allowed for instances of **representation_item**.

EXPRESS specification:

```

*)
RULE representation_item_subtype_exclusiveness FOR
  (representation_item);
WHERE
  WR1:  SIZEOF(QUERY(r <* representation_item |
    SIZEOF(TYPEOF(r) *
      ['ELECTROTECHNICAL_DESIGN.COMPOUND_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.DESRIPTIVE_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.GEOMETRIC_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.MEASURE_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.VALUE_REPRESENTATION_ITEM']
    ) > 1
  )) = 0;
  WR2:  SIZEOF(QUERY(r <* representation_item |
    SIZEOF(TYPEOF(r) *
      ['ELECTROTECHNICAL_DESIGN.COMPOUND_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.DESRIPTIVE_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.MEASURE_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.TOPOLOGICAL_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.VALUE_REPRESENTATION_ITEM']
    ) > 1
  )) = 0;
  WR3:  SIZEOF(QUERY(r <* representation_item |
    SIZEOF(TYPEOF(r) *
      ['ELECTROTECHNICAL_DESIGN.COMPOUND_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.DESRIPTIVE_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.MAPPED_ITEM',
'ELECTROTECHNICAL_DESIGN.MEASURE_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.TOPOLOGICAL_REPRESENTATION_ITEM',
'ELECTROTECHNICAL_DESIGN.VALUE_REPRESENTATION_ITEM']
    ) > 1
  )) = 0;
END_RULE;
(*

```

Argument definitions:

ISO 10303-212:2001(E)

representation_item: the set of all instances of **representation_item** entities.

Formal propositions:

WR1: Each instance of **representation_item** shall be an instance of at most one of its subtypes **compound_representation_item**, **descriptive_representation_item**, **geometric_representation_item**, **measure_representation_item**, or **value_representation_item**.

WR2: Each instance of **representation_item** shall be an instance of at most one of its subtypes **compound_representation_item**, **descriptive_representation_item**, **measure_representation_item**, **topological_representation_item**, or **value_representation_item**.

WR3: Each instance of **representation_item** shall be an instance of at most one of its subtypes **compound_representation_item**, **descriptive_representation_item**, **mapped_item**, **measure_representation_item**, **topological_representation_item**, or **value_representation_item**.

5.2.3.98 representation_relationship_constraint

The **representation_relationship_constraint** rule ensures that each instance of **representation_relationship** satisfies the **representation_relationship_correlation** function that correlates the **names** of a **representation_relationship** to elements of product data.

EXPRESS specification:

```
*)
RULE representation_relationship_constraint FOR
  (representation_relationship);
WHERE
  WR1:  SIZEOF(QUERY(r <* representation_relationship |
                    NOT(representation_relationship_correlation(r)) )
            ) = 0;
END_RULE;
(*
```

Argument definitions:

representation_relationship: the set of all instances of the **representation_relationship** entity.

Formal propositions:

WR1: For each instance of **representation_relationship**, the **representation_relationship_correlation** function that correlates the **names** of a **representation_relationship** to elements of product data shall be satisfied.

5.2.3.99 representation_subtype_exclusiveness

The **representation_subtype_exclusiveness** rule specifies that each instance of **representation** shall be an instance of at most one of its subtypes **draughting_model**, **note_representation**, **presentation_representation**, **reference_grid_representation**, or **shape_representation**.

EXPRESS specification:

```
*)
```

```

RULE representation_subtype_exclusiveness FOR
  (representation);
WHERE
  WR1:  SIZEOF(QUERY(r <* representation |
          SIZEOF(TYPEOF(r) *
                ['ELECTROTECHNICAL_DESIGN.' +
                 'DRAUGHTING_MODEL',
                 'ELECTROTECHNICAL_DESIGN.' +
                 'NOTE_REPRESENTATION',
                 'ELECTROTECHNICAL_DESIGN.' +
                 'PRESENTATION_REPRESENTATION',
                 'ELECTROTECHNICAL_DESIGN.' +
                 'REFERENCE_GRID_REPRESENTATION',
                 'ELECTROTECHNICAL_DESIGN.' +
                 'SHAPE_REPRESENTATION']
          ) > 1 )
        ) = 0;
END_RULE;
(*

```

Argument definitions:

representation: the set of all instances of **representation** entities.

Formal propositions:

WR1: Each instance of **representation** shall be an instance of at most one of its subtypes **draughting_model**, **note_representation**, **presentation_representation**, **reference_grid_representation**, or **shape_representation**.

5.2.3.100 restrict_alternative_definition

The **restrict_alternative_definition** rule specifies the restrictions that apply to **product_definitions** which reference as **frame_of_reference** a **product_definition_context** with a **name** of 'alternative definition'.

EXPRESS specification:

```

*)
RULE restrict_alternative_definition FOR
  (product_definition,
   product_definition_context);
WHERE
  WR1: SIZEOF ( QUERY ( pd <* product_definition | ( pd.
    frame_of_reference.name = 'alternative definition' ) AND (
    SIZEOF ( QUERY ( pdr <* USEDIN ( pd ,
    'ELECTROTECHNICAL_DESIGN.'+'PRODUCT_DEFINITION_RELATIONSHIP.'+
    'RELATED_PRODUCT_DEFINITION' ) | pdr.name =
    'solution alternative definition' ) ) <>1 ) ) ) =0;
  WR2: SIZEOF ( QUERY ( pd <* product_definition | ( pd.
    frame_of_reference.name = 'alternative definition' ) AND
    NOT ( pd.name IN ['technical' , 'supplier' , 'final' ,
    'technical supplier' , 'technical final' , 'supplier final'
    , 'technical supplier final' , ''] ) ) ) =0;

```

ISO 10303-212:2001(E)

```
WR3: SIZEOF ( QUERY ( pd <* product_definition | ( pd.
  frame_of_reference.name = 'alternative definition' ) AND (
  pd.name IN ['supplier', 'technical supplier',
  'supplier final', 'technical supplier final' ] ) AND (
  SIZEOF ( QUERY ( aoa <* USEDIN ( pd ,
  'ELECTROTECHNICAL_DESIGN.'+'APPLIED_ORGANIZATION_ASSIGNMENT.'+
  'ITEMS' ) | aoa.role.name = 'supplier' ) ) <>1 ) ) ) =0;
WR4: SIZEOF ( QUERY ( pd <* product_definition | ( pd.
  frame_of_reference.name = 'alternative definition' ) AND (

Argument definitions:

ISO 10303-212:2001(E)

applied_organizational_project_assignment: the set of all instances of **applied_organizational_project_assignment**

object_role: the set of all instances of **object_role**

Formal propositions:

WR1: If the **role** has a **name** of 'affecting project', only items of type **product_concept** shall be in the set of **items**.

WR2: If the **role** has a **name** of 'work program', only items of type **executed_action** shall be in the set of **items**.

5.2.3.106 restrict_camera_image_in_view

The **restrict_camera_image_in_view** rule ensures that each **camera_image** is contained in exactly one **presentation_view** and that each **presentation_view** contains at most one **camera_image**. For more information see definition of application objects **Model_image** and **View**.

EXPRESS specification:

```
*)
RULE restrict_camera_image_in_view FOR
  (camera_image,
   presentation_view);
WHERE
  WR1: SIZEOF ( QUERY ( ci <* camera_image | ( SIZEOF ( QUERY ( r
    <* USEDIN ( ci , 'ELECTROTECHNICAL_DESIGN.REPRESENTATION.ITEMS '
  )
    | ( 'ELECTROTECHNICAL_DESIGN.'+ 'PRESENTATION_VIEW' IN TYPEOF ( r
  ) ) ) ) ) <>1 ) ) =0;
  WR2: SIZEOF ( QUERY ( pv <* presentation_view | ( SIZEOF (
    QUERY ( ri <* pv\ representation.items |
    'ELECTROTECHNICAL_DESIGN.'+ 'CAMERA_IMAGE' IN TYPEOF ( ri ) ) )
  )
  >1 ) ) =0;
END_RULE;
(*
```

Argument definitions:

camera_image: the set of all instances of **camera_image**.

presentation_view: the set of all instances of **presentation_view**.

Formal propositions:

WR1: Each **camera_image** shall be included in exactly one **presentation_view**.

WR2: Each **presentation_view** shall contain at most one **camera_image**.

5.2.3.107 restrict_class_system_assignment_for_approval_status

The **restrict_class_system_assignment_for_approval_status** rule specifies that each instance of **approval_status** shall be referenced by at most one instance of **applied_classification_assignment** that specifies the classification system for the **approval_status**.

EXPRESS specification:

```

*)
RULE restrict_class_system_assignment_for_approval_status FOR
  (applied_classification_assignment,
   approval_status);
WHERE
  WR1: SIZEOF ( QUERY ( ent <* approval_status | SIZEOF ( QUERY (

    frame_of_reference.name<> 'physical occurrence' ) ) ) ) =0;
  WR6: SIZEOF ( QUERY ( cd <* configuration_design | ( cd.name =
    'physical instance basis' ) AND ( NOT (
    'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_IDENTIFICATION' IN TYPEOF
    (
    cd.configuration ) ) ) ) ) =0;
END_RULE;
(*

```

Argument definitions:

configuration_design: the set of all instances of **configuration_design**.

ISO 10303-212:2001(E)

product_class: the set of all instances of **product_class**.

Formal propositions:

WR1: Each instance of **configuration_design** which has a **name** of 'functionality' shall reference as **design** a **product_definition** which references as its **frame_of_reference** a **product_definition_context** with a **name** of 'functional definition'.

WR2: Each instance of **configuration_design** which has a **name** of 'realization' shall reference as **design** a **product_definition** which references as its **frame_of_reference** a **product_definition_context** with a **name** of 'conceptual definition'.

WR3: Each instance of **configuration_design** which has a **name** of 'functionality' or 'realization' shall reference as **configuration** a **configuration_item** which references as its **item_concept** a **product_class**.

WR4: Each instance of **configuration_design** which has as **design** a **product_definition** which references as its **frame_of_reference** a **product_definition_context** with a **name** of 'design constraint definition' shall reference as **configuration** a **configuration_item** which has a **name** of 'design constraint usage' and which references as its **item_concept** a **product_class**.

WR5: Each instance of **configuration_design** which has a **name** of 'physical instance basis' shall reference as **design** a **product_definition** which references as its **frame_of_reference** a **product_definition_context** with a **name** of 'physical occurrence'.

WR6: Each instance of **configuration_design** which has a **name** of 'physical instance basis' shall reference as **configuration** a **configuration_item** of type **product_identification**.

5.2.3.114 **restrict draughting title for drawing sheet revision**

The **restrict draughting title for drawing sheet revision** rule ensures that each instance of **drawing_sheet_revision** can be referenced by at most one instance of **draughting_title**.

EXPRESS specification:

```
*)
RULE restrict_draughting_title_for_drawing_sheet_revision FOR
    (drawing_sheet_revision);
WHERE
    WR1:  SIZEOF(QUERY(d <* drawing_sheet_revision |

            'DRAUGHTING_TITLE.' +
            'ITEMS')
        ) > 1
    )) = 0;
END_RULE;
(*
```

Argument definitions:

drawing_sheet_revision: the set of all instances of **drawing_sheet_revision** entities.

Formal propositions:

WR1: Each instance of **drawing_sheet_revision** shall be referenced by at most one instance of **draughting_title** in the role of **items**.

5.2.3.115 restrict_effectivity_assignment_for_class_category_usage

The **restrict_effectivity_assignment_for_class_category_usage** rule restricts the usage of **product_concept_feature_category_usage** objects in an **applied_effectivity_assignment**.

EXPRESS specification:

```

*)
RULE restrict_effectivity_assignment_for_class_category_usage FOR
  (applied_effectivity_assignment,
   product_concept_feature_category_usage);
WHERE
  WR1: SIZEOF ( QUERY ( aea <* applied_effectivity_assignment | (
    ( SIZEOF ( QUERY ( i <* aea.items | (
      'ELECTROTECHNICAL_DESIGN.'+
      'PRODUCT_CONCEPT_FEATURE_CATEGORY_USAGE' IN TYPEOF ( i ) )
    ) ) >0 ) OR ( SIZEOF ( QUERY ( i <* aea.items | (
      'ELECTROTECHNICAL_DESIGN.'+
      'PRODUCT_CONCEPT_FEATURE_CATEGORY_USAGE' IN TYPEOF ( i ) )
    ) ) <> SIZEOF ( aea.items ) ) ) AND ( ( SIZEOF ( TYPEOF (
      aea.assigned_effectivity ) ) >1 ) OR ( aea.
      assigned_effectivity.id<> 'class usage' ) OR ( SIZEOF (
      QUERY ( cueca <* USEDIN ( aea ,
        'ELECTROTECHNICAL_DESIGN.'+'EFFECTIVITY_CONTEXT_ASSIGNMENT.'+
        'ASSIGNED_EFFECTIVITY_ASSIGNMENT' ) |
        'ELECTROTECHNICAL_DESIGN.'+
        'CLASS_USAGE_EFFECTIVITY_CONTEXT_ASSIGNMENT' IN TYPEOF (
          cueca ) ) ) =0 ) ) ) ) =0;
END_RULE;
(*

```

Argument definitions:

applied_effectivity_assignment: the set of all instances of **applied_effectivity_assignment**.

product_concept_feature_category_usage: the set of all instances of **product_concept_feature_category_usage**.

Formal propositions:

WR1: An **applied_effectivity_assignment** which has a **product_concept_feature_category_usage** in its set of **items** may only have other **product_concept_feature_category_usage** objects in its set of **items**. It shall have an **assigned_effectivity** which is not of an **effectivity** subtype and which has an **id** of 'class usage' and it shall be the **assigned_effectivity_assignment** of a **class_usage_effectivity_context_assignment**.

5.2.3.116 restrict_effectivity_for_effectivity_relationship

The **restrict_effectivity_for_effectivity_relationship** rule restricts the types of **effectivity** that may participate in an **effectivity_relationship**.

EXPRESS specification:

```
*)
RULE restrict_effectivity_for_effectivity_relationship FOR
  (effectivity_relationship);
WHERE
  WR1: SIZEOF ( QUERY ( er <* effectivity_relationship | ( SIZEOF
    ( ['ELECTROTECHNICAL_DESIGN.'+ 'LOT_EFFECTIVITY' ,
      'ELECTROTECHNICAL_DESIGN.'+ 'SERIAL_NUMBERED_EFFECTIVITY' ,
      'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION_EFFECTIVITY'])*
    TYPEOF ( er. relating_effectivity ) ) >0 ) OR ( SIZEOF (
    ['ELECTROTECHNICAL_DESIGN.'+ 'LOT_EFFECTIVITY' ,
      'ELECTROTECHNICAL_DESIGN.'+ 'SERIAL_NUMBERED_EFFECTIVITY' ,
      'ELECTROTECHNICAL_DESIGN.'+ 'PRODUCT_DEFINITION_EFFECTIVITY'])*
    TYPEOF ( er. related_effectivity ) ) >0 ) ) =0;
END_RULE;
(*
```

Argument definitions:

effectivity_relationship: the set of all instances of **effectivity_relationship**.

Formal propositions:

WR1: The **relating_effectivity** and the **related_effectivity** of an **effectivity_relationship** may not be of type **lot_effectivity**, **serial_numbered_effectivity**, or **product_definition_effectivity**

5.2.3.117 restrict_effectivity_usage

The **restrict_effectivity_usage** rule enforces the usage of an **effectivity** that is not a **dated_effectivity** or a **time_interval_based_effectivity** by at least one instance of **applied_effectivity_assignment** or **effectivity_relationship**.

EXPRESS specification:

```
*)
RULE restrict_effectivity_usage FOR
  (configured_effectivity_assignment,
  effectivity);
WHERE
  WR1: SIZEOF ( QUERY ( e <* effectivity | ( SIZEOF (

                    ) > 1 )
                    ) = 0;
```

```
END_RULE;
(*
```

Argument definitions:

representation: the set of all instances of **representation** entities.

Formal propositions:

WR1: Each instance of **representation** shall be referenced by at most one instance of **language_assignment** in the role of **items**.

5.2.3.124 restrict_product_category_for_product

The **restrict_product_category_for_product** rule enforces the existence of a **product_related_product_category** with a **name** of 'accessory', 'conceptual product', 'document', 'functionality', 'other', 'part', 'requirement', 'software', or 'technical system' for each **product** 'accessory', 'conceptual product', 'document', 'functionality', 'other', 'part', 'requirement', 'software', or 'technical system'

EXPRESS specification:

```
*)
RULE restrict_product_category_for_product FOR
  (product);
WHERE
  WR1: SIZEOF ( QUERY ( p <* product | SIZEOF ( QUERY ( prpc <*
    USEDIN ( p ,
      'ELECTROTECHNICAL_DESIGN.'+'PRODUCT_RELATED_PRODUCT_CATEGORY.'+
      'PRODUCTS' ) | prpc.name IN ['conceptual product' , 'document'
    ,
      'functionality' , 'part' , 'physically realized product',
      'alternative solution' , 'requirement' ,
      'technical system' , 'accessory' , 'software'] ) ) =0 ) )
    =0;
  WR2: SIZEOF ( QUERY ( p <* product | SIZEOF ( QUERY ( prpc <*
    USEDIN ( p ,
      'ELECTROTECHNICAL_DESIGN.'+'PRODUCT_RELATED_PRODUCT_CATEGORY.'+
      'PRODUCTS' ) | prpc.name IN ['conceptual product' , 'document'
    ,
      'functionality' , 'part' , 'physically realized product',
      'alternative solution' , 'requirement' ,
      'technical system' ] ) ) >1 ) ) =0;
END_RULE;
(*
```

Argument definitions:

product: the set of all instances of **product**.

ISO 10303-212:2001(E)

Formal propositions:

WR1: Each instance of **product** shall be referenced by a **product_related_product_category** with a **name** of either 'conceptual product', 'document', 'functionality', 'part', 'physically realized product', 'alternative solution', 'requirement', 'technical system', 'accessory', 'software'.

WR2: Each instance of **product** shall be referenced by at most one **product_related_product_category** with a **name** of 'conceptual product', 'document', 'functionality', 'part', 'physically realized product', 'alternative solution', 'requirement', 'technical system'.

5.2.3.125 restrict_product_definition_substitute

The **restrict_product_definition_substitute** rule specifies the restrictions that apply to the usage of **product_definition_substitute**.

EXPRESS specification:

```
*)
RULE restrict_product_definition_substitute FOR
  (product_definition_substitute);
WHERE
  WR1: SIZEOF ( QUERY ( pds <* product_definition_substitute | (
    SIZEOF ( USEDIN ( pds ,
      'ELECTROTECHNICAL_DESIGN.'+'APPLIED_EFFECTIVITY_ASSIGNMENT.'+
      'ITEMS' ) ) =0 ) ) ) =0;
  WR2: SIZEOF ( QUERY ( pds <* product_definition_substitute |
    pds.substitute_definition.frame_of_reference.name<>
    'part occurrence' ) ) =0;
  WR3: SIZEOF ( QUERY ( pds <* product_definition_substitute | (
    ( 'ELECTROTECHNICAL_DESIGN.'+ 'ASSEMBLY_COMPONENT_USAGE' IN
    TYPEOF ( pds.context_relationship ) ) AND ( SIZEOF (
    USEDIN ( pds.context_relationship ,
      'ELECTROTECHNICAL_DESIGN.'+'PRODUCT_DEFINITION_OCCURRENCE_RELATIONSH
      IP.'+
      'OCCURRENCE_USAGE' ) ) =0 ) ) AND ( (
      'ELECTROTECHNICAL_DESIGN.'+
      'PRODUCT_DEFINITION_RELATIONSHIP' IN TYPEOF ( pds.
      context_relationship ) ) AND ( pds.
      context_relationship.related_product_definition.
      frame_of_reference.name<> 'part occurrence' ) ) ) ) =0;
END_RULE;
(*
```

Argument definitions:

product_definition_substitute: the set of all instances of **product_definition_substitute**.

Formal propositions:

WR1: For each instance of **product_definition_substitute** there shall be at least one instance of **applied_effectivity_assignment** that contains the instance in its set of **items**. This rule enforces the

requirement for every instance of `Replaced_usage_relationship` to have at least one Effectivity (see 4.2.127) applied to it specifying the start of the validity of the replacement.

WR2: Each instance of `product_definition_substitute` shall reference as `substitute_definition` a `product_definition` which references as `frame_of_reference` a `product_definition_context` with a name of 'part occurrence'.

WR3: Each instance of `product_definition_substitute` shall reference as `context_relationship` an `assembly_component_usage` which is referenced as `occurrence_usage` by a `product_definition_occurrence_relationship`, or shall reference as `context_relationship` a `product_definition_relationship` with a `related_product_definition` which references as its `frame_of_reference` a `product_definition_context` with a name of 'part occurrence'.

5.2.3.126 restrict_properties_of_document_file

The `restrict_properties_of_document_file` rule specifies the restrictions that apply for properties of `digital_files`.

EXPRESS specification:

```

*)
RULE restrict_properties_of_document_file FOR
  (document_file);
WHERE
  WR1: SIZEOF ( QUERY ( df <* document_file | SIZEOF ( QUERY ( pd
    <* USEDIN ( df ,
      'ELECTROTECHNICAL_DESIGN.'+'PROPERTY_DEFINITION.'+ 'DEFINITION'
    )
    | pd. name = 'document property' ) ) >1 ) ) =0;
  WR2: SIZEOF ( QUERY ( df <* document_file | SIZEOF ( QUERY ( rt
    <* df. representation_types | ( 'ELECTROTECHNICAL_DESIGN.'+
      'DOCUMENT_REPRESENTATION_TYPE' IN TYPEOF ( rt ) ) AND ( rt.
      name IN [ 'digital' , 'physical' ] ) ) ) =0 ) ) =0;
END_RULE;
(*

```

Argument definitions:

document_file: the set of all instances of `document_file`.

Formal propositions:

WR1: Each instance of `document_file` shall be referenced as `definition` by at most one `property_definition` with a name of 'document property'.

WR2: Each instance of `document_file` shall reference as `representation_types` an instance of `document_representation_type` with a name of either 'digital', or 'physical'.

5.2.3.127 restrict_property_value_format_for_general_property

The `restrict_property_value_format_for_general_property` rule ensures that each instance of `general_property` can be referenced by at most one instance of

ISO 10303-212:2001(E)

property_definition_representation where the **used_representation** has a **name** of 'property value format'.

EXPRESS specification:

```
*)
RULE restrict_property_value_format_for_general_property FOR
  (general_property);
WHERE
  WR1:  SIZEOF(QUERY(gp <* general_property |
                SIZEOF(QUERY(pdr <*
                USEDIN(gp,
                'ELECTROTECHNICAL_DESIGN.' +
                'PROPERTY_DEFINITION_REPRESENTATION.'
+
                'DEFINITION') |
                pdr.used_representation.name
                = 'property value format')
                ) > 2 )
        ) = 0;
END_RULE;
(*
```

Argument definitions:

general_property: the set of all instances of the **general_property** entity.

Formal Propositions:

WR1: Each instance of **general_property** shall be referenced by at most one instance of **property_definition_representation** where the **used_representation** has a **name** of 'property value format'.

5.2.3.128 restrict_representation_for_document_content_property

The **restrict_representation_for_document_content_property** rule specifies the restrictions that apply for **representations** with a **name** of 'document content'.

EXPRESS specification:

```
*)
RULE restrict_representation_for_document_content_property FOR
  (representation,
  representation_item);
WHERE
  WR1:  SIZEOF ( QUERY ( r <* representation | ( r.name =

      'ITEMS') |
      i.role.name = 'version')
    ) > 1 )
  ) = 0;
END_RULE;
(*
```

Argument definitions:

product_concept_feature: the set of all instances of **product_concept_feature** entities.

Formal Propositions:

WR1: Each instance of **product_concept_feature** shall be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version'.

5.2.3.144 retention_requires_retention_assignment

The **retention_requires_retention_assignment** rule specifies that each instance of **retention** is referenced by at least one instance of **applied_action_assignment** as the **assigned_action**, where the role of this **applied_action_assignment** is 'retention'.

This rule enforces the requirement for every instance of **Retention_period** (see 4.2.289) to be applied at least once.

EXPRESS specification:

```
*)
RULE retention_requires_retention_assignment FOR
  (retention);
WHERE
  WR1: SIZEOF ( QUERY ( r <* retention | SIZEOF ( QUERY ( aa <*
    USEDIN ( r , 'ELECTROTECHNICAL DESIGN.'+'ACTION ASSIGNMENT.'+
    'ASSIGNED_ACTION' ) | ( 'ELECTROTECHNICAL DESIGN.'+
    'APPLIED_ACTION_ASSIGNMENT' IN TYPEOF ( aa ) ) AND ( aa.
    role.name = 'retention' ) ) ) =0 ) ) =0;
END_RULE;
(*
```

Argument definitions:

retention: the set of all instances of **retention**.

Formal propositions:

WR1: Each instance of **retention** shall be referenced at least once as the **assigned_action** by an instance of **applied_action_assignment**, where the **name** of the **object_role** of this **applied_action_assignment** is 'retention'.

5.2.3.145 security_classification_requires_security_classification_assignment

The **security_classification_requires_security_classification_assignment** rule specifies that each instance of **security_classification** is referenced by at least one instance of **security_classification_assignment** as the **assigned_security_classification**.

This rule enforces the requirement for every **Security_classification** (see 4.2.301) to be applied at least once.

EXPRESS specification:

```
*)
RULE
security_classification_requires_security_classification_assignment
FOR
    (security_classification);
WHERE
    WR1: SIZEOF ( QUERY ( sc <* security_classification | SIZEOF (
        USEDIN ( sc ,
            'ELECTROTECHNICAL_DESIGN.'+'SECURITY_CLASSIFICATION_ASSIGNMENT.'+
            'ASSIGNED_SECURITY_CLASSIFICATION' ) ) =0 ) ) =0;
END_RULE;
(*
```

Argument definitions:

security_classification: the set of all instances of **security_classification**.

Formal propositions:

WR1: Each instance of **security_classification** shall be used at least once as the **assigned_security_classification** by an instance of **security_classification_assignment**.

5.2.3.146 selected_instance_usage_requires_representation

The **selected_instance_usage_requires_representation** rule specifies that each instance of **assembly_component_usage** which has a **name** of 'selected instance usage' shall be represented by a **representation** with a **name** of 'selection criteria' containing two **representation_items** describing the constraints the quantity of the **related_product_definition** depends on.

EXPRESS specification:

```
*)
RULE selected_instance_usage_requires_representation FOR
    (assembly_component_usage,
    representation);
WHERE
    WR1: SIZEOF ( QUERY ( acr <* assembly_component_usage | ( acr.
        name = 'selected instance usage' ) AND ( SIZEOF ( QUERY (
        pd <* USEDIN ( acr ,
```

```

'ELECTROTECHNICAL_DESIGN.'+'PROPERTY_DEFINITION.'+ 'DEFINITION'
)
| ( pdr. name = 'occurrence selection' ) AND ( SIZEOF (
QUERY ( pdr <* USEDIN ( pd ,

'ELECTROTECHNICAL_DESIGN.'+'PROPERTY_DEFINITION_REPRESENTATION.'+
'DEFINITION' ) | ( pdr. used_representation.name =
'selection criteria' ) AND ( SIZEOF ( pdr.
used_representation.items ) =2 ) AND ( SIZEOF ( QUERY ( i
<* pdr. used_representation.items | ( SIZEOF (
['ELECTROTECHNICAL_DESIGN.'+ 'MEASURE_REPRESENTATION_ITEM' ,
'ELECTROTECHNICAL_DESIGN.'+ 'VALUE_RANGE']* TYPEOF ( i ) ) =1 )
AND ( i.name = 'selection quantity' ) ) ) =1 ) AND ( SIZEOF
( QUERY ( i <* pdr. used_representation.items | (
'ELECTROTECHNICAL_DESIGN.'+ 'DESCRIPTIVE_REPRESENTATION_ITEM'
IN
TYPEOF ( i ) ) AND ( i.name = 'selection control' ) ) ) =1
) ) ) >0 ) ) ) =0 ) ) ) =0;
END_RULE;
(*

```

Argument definitions:

assembly_component_usage: the set of all instances of **assembly_component_usage**.

representation: the set of all instances of **representation**.

Formal propositions:

WR1: Each instance of **assembly_component_relationship** which has a **name** of 'selected instance usage' shall be referenced by a **property_definition** which has a **name** of 'occurrence selection', and which is referenced as **definition** by a **property_definition_representation** which has as **used_representation** a **representation** which has a **name** of 'selection criteria' and which contains exactly two **representation_items** in its set of **items**. One of these **representation_items** shall be of type **measure_representation_item** or **value_range** and shall have a **name** of 'selection quantity'. The other one of these **representation_items** shall be of type **descriptive_representation_item** and shall have a **name** of 'selection control'.

5.2.3.147 shape_aspect_relationship_constraint

The **shape_aspect_relationship_constraint** rule ensures that each instance of **shape_aspect_relationship** satisfies the **shape_aspect_relationship_correlation** function that correlates the **names** of a **shape_aspect_relationship** to elements of product data.

EXPRESS specification:

```

*)
RULE shape_aspect_relationship_constraint FOR
  (shape_aspect_relationship);
WHERE
  WR1:  SIZEOF(QUERY(s <* shape_aspect_relationship |
          NOT(shape_aspect_relationship_correlation(s) )
          ) = 0;
END_RULE;

```

ISO 10303-212:2001(E)

(*

Argument definitions:

shape_aspect_relationship: the set of all instances of the **shape_aspect_relationship** entity.

Formal propositions:

WR1: For each instance of **shape_aspect_relationship**, the **shape_aspect_relationship_correlation** function that correlates the **names** of a **shape_aspect_relationship** to elements of product data shall be satisfied.

5.2.3.148 **shape_aspect_subtype_exclusiveness**

The **shape_aspect_subtype_exclusiveness** rule specifies that each instance of **shape_aspect** shall be an instance of at most one of its subtypes **connectivity_definition**, **equipment_marking**, **installation_location**, **installation_node**, **installation_route**, **installation_section**, **installation_section_end**, **installation_section_interface**, **installation_segment**, **interface**, **terminal**.

EXPRESS specification:

```
*)
RULE shape_aspect_subtype_exclusiveness FOR
    (shape_aspect);
WHERE
    WR1: SIZEOF(QUERY(s <* shape_aspect |
        SIZEOF(TYPEOF(s) *

WR1: Each **pre_defined_curve_font** shall be a **draughting_pre_defined_curve_font**.

5.2.3.159 subtype_mandatory_pre_defined_symbol

The **subtype_mandatory_pre_defined_symbol** rule ensures that all **pre_defined_symbol** entities are **pre_defined_geometrical_tolerance_symbol**, **pre_defined_dimension_symbol**, **pre_defined_point_marker_symbol**, or **pre_defined_terminator_symbol** entities.

NOTE The definition of this rule is identical to the definition in ISO 10303-201 and ISO 10303-202.

EXPRESS specification:

```
*)
RULE subtype_mandatory_pre_defined_symbol FOR
      (pre_defined_symbol);
WHERE
      WR1: SIZEOF(QUERY(pds <* pre_defined_symbol |
      NOT(SIZEOF(TYPEOF(pds) *
      ['ELECTROTECHNICAL_DESIGN.' +
      'PRE_DEFINED_GEOMETRICAL_TOLERANCE_SYMBOL',
      'ELECTROTECHNICAL_DESIGN.' +
      'PRE_DEFINED_DIMENSION_SYMBOL',
      'ELECTROTECHNICAL_DESIGN.' +
      'PRE_DEFINED_POINT_MARKER_SYMBOL',
      'ELECTROTECHNICAL_DESIGN.' +
      'PRE_DEFINED_TERMINATOR_SYMBOL']) = 1)
      )) = 0;
END_RULE;
(*
```

Argument definitions:

pre_defined_symbol: the set of all instances of the **pre_defined_symbol** entity.

Formal propositions:

WR1: Each **pre_defined_symbol** shall be either a **pre_defined_geometrical_tolerance_symbol**, **pre_defined_dimension_symbol**, **pre_defined_point_marker_symbol**, or **pre_defined_terminator_symbol**.

5.2.3.160 text_font_usage

The **text_font_usage** rule ensures that every **pre_defined_text_font** and **externally_defined_text_font** is used in the presentation of a **text_literal**.

EXPRESS specification:

```
*)
RULE text_font_usage FOR
  (externally_defined_text_font,
   pre_defined_text_font);
WHERE
  WR1: SIZEOF ( QUERY ( pdtf <* pre_defined_text_font | SIZEOF (
    USEDIN ( pdtf , 'ELECTROTECHNICAL_DESIGN.TEXT_LITERAL.FONT' ) )
    =0 ) ) =0;
  WR2: SIZEOF ( QUERY ( edtf <* externally_defined_text_font |
    SIZEOF ( USEDIN ( edtf ,
    'ELECTROTECHNICAL_DESIGN.TEXT_LITERAL.FONT' ) ) =0 ) ) =0;
END_RULE;
(*
```

Argument definitions:

externally_defined_text_font: the set of all instances of **externally_defined_text_font**.

pre_defined_text_font: the set of all instances of **pre_defined_text_font**.

Formal propositions:

WR1: Each **pre_defined_text_font** shall be the font for at least one **text_literal**.

WR2: Each **externally_defined_text_font** shall be the font for at least one **text_literal**.

5.2.3.161 versioned_action_request_requires_date_and_person_or_organization

The **versioned_action_request_requires_date_and_person_or_organization** rule specifies that each instance of **versioned_action_request** shall be referenced by at least two instances of either **applied_person_and_organization_assignment** or **applied_organization_assignment** that has a **role** with a **name** of 'requestor' and 'notified person or organization', respectively.

This rule enforces the requirement for every **Work_request** (see 4.2.365) to have at least one notified person or organization associated to it.

EXPRESS specification:

```
*)
```

ISO 10303-212:2001(E)

```
RULE
versioned_action_request_requires_date_and_person_or_organization
FOR
    (versioned_action_request);
WHERE
    WR1: SIZEOF ( QUERY ( va <* versioned_action_request | ( SIZEOF
        ( QUERY ( adapaoa <* USEDIN ( va ,
            'ELECTROTECHNICAL_DESIGN.'+
            'APPLIED_PERSON_AND_ORGANIZATION_ASSIGNMENT.'+
            'ITEMS' ) | adapaoa.role.name = 'requestor ' ) ) + SIZEOF (
        QUERY ( adaoa <* USEDIN ( va ,
            'ELECTROTECHNICAL_DESIGN.'+'APPLIED_ORGANIZATION_ASSIGNMENT.'+
            'ITEMS' ) | adaoa.role.name = 'requestor ' ) ) ) =0 ) ) =0;
    WR2: SIZEOF ( QUERY ( va <* versioned_action_request | ( SIZEOF
        ( QUERY ( adapaoa <* USEDIN ( va ,
            'ELECTROTECHNICAL_DESIGN.'+
            'APPLIED_PERSON_AND_ORGANIZATION_ASSIGNMENT.'+
            'ITEMS' ) | adapaoa.role.name =
            'notified person or organization' ) ) + SIZEOF ( QUERY (
        adaoa <* USEDIN ( va ,
            'ELECTROTECHNICAL_DESIGN.'+'APPLIED_ORGANIZATION_ASSIGNMENT.'+
            'ITEMS' ) | adaoa.role.name =
            'notified person or organization' ) ) ) =0 ) ) =0;
END_RULE;
(*
```

Argument definitions:

versioned_action_request: the set of all instances of **versioned_action_request**.

Formal propositions:

WR1: For each instance of **versioned_action_request** there shall be at least one instance of either **applied_person_and_organization_assignment**, or **applied_organization_assignment** that contains the instance of **versioned_action_request** in its set of **items** and has a **role** with a **name** of 'requestor'.

WR2: For each instance of **versioned_action_request** there shall be at least one instance of either **applied_person_and_organization_assignment**, or **applied_organization_assignment** that contains the instance of **versioned_action_request** in its set of **items** and has a **role** with a **name** of 'notified person or organization'.

5.2.3.162 versioned_action_request_requires_status

The **versioned_action_request_requires_status** rule ensures that each instance of **versioned_action_request** is referenced by exactly one instance of the **action_request_status** entity.

EXPRESS specification:

```
*)
RULE versioned_action_request_requires_status FOR
    (action_request_status,
    versioned_action_request);
WHERE
```

```

WR1:  SIZEOF(QUERY(ar <* versioned_action_request |
              (NOT(SIZEOF(QUERY(ars <* action_request_status |
                              (ar :=: ars.assigned_request) )
                              ) = 1 )) )
      ) = 0;
END_RULE;
(*

```

Argument definitions:

action_request_status: the set of all instances of **action_request_status** entities.

versioned_action_request: the set of all instances of **versioned_action_request** entities.

Formal propositions:

WR1: Each instance of **versioned_action_request** shall be referenced by exactly one instance of **action_request_status** as the **assigned_request**.

5.2.4 electrotechnical_design function definitions

5.2.4.1 acyclic_shape_aspect_relationship

The **acyclic_shape_aspect_relationship** function determines whether or not the given **shape_aspects** have been self-defined by the associations made in the specified **shape_aspect_relationship**. This function may be used to evaluate either a **shape_aspect_relationship** or any of its subtypes.

This function returns a value of TRUE if none of the elements of the **relatives** argument occur in the **relation** argument of the type which is given in the **specific_relation** argument. Otherwise it returns a value of FALSE.

EXPRESS specification:

```

*)
FUNCTION acyclic_shape_aspect_relationship
  (relation          : shape_aspect_relationship;
   relatives         : SET [1:?] OF shape_aspect;
   specific_relation : STRING) : LOGICAL;
LOCAL
  x : SET OF shape_aspect_relationship;
END_LOCAL;

IF relation.relating_shape_aspect IN relatives THEN
  RETURN (FALSE);
END_IF;
x := QUERY (sa <* bag_to_set
           (USEDIN (relation.relating_shape_aspect,
                   'PRODUCT_PROPERTY_DEFINITION_SCHEMA.' +
                   'SHAPE_ASPECT_RELATIONSHIP.' +
                   'RELATED_SHAPE_ASPECT')) |
           specific_relation IN TYPEOF (sa));
REPEAT i := 1 TO HIINDEX(x);
  IF NOT acyclic_shape_aspect_relationship

```

ISO 10303-212:2001(E)

```
(x[i],
  relatives + relation.relatng_shape_aspect,
  specific_relation) THEN
  RETURN (FALSE);
END_IF;
END_REPEAT;
RETURN (TRUE);
END_FUNCTION;
(*
```

Argument definitions:

relation: (input) the candidate **shape_aspect_relationship** to be checked.

relatives: (input) the set of **shape_aspects** which the function is searching for in the **relating_shape_aspect** parameter of the **relation** argument.

specific_relation: (input) the fully qualified name of a subtype of the **shape_aspect_relationship** entity.

5.2.4.2 applied_classification_assignment_correlation

The **applied_classification_assignment_correlation** function returns true if the **name** attribute value of the **classification_role** associated to instances of the **applied_classification_assignment** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

- An instance of **applied_classification_assignment** that has an associated **classification_role** with a **name** of ‘class system membership’ shall reference
 - a) in the role of the **assigned_class** an instance of **class_system**;
 - b) in the role of **items** only instances of **applied_identification_assignment**, **approval_status**, **class**, **colour_representation_item**, **equipment_marking**, **item_designation_assignment**, or **security_classification_level**.
- An instance of **applied_classification_assignment** that has an associated **classification_role** with a **name** of either ‘definitional’, ‘non definitional’, or ‘’ (empty string) shall reference
 - a) in the role of the **assigned_class** an instance of **class**;
 - b) in the role of **items** only instances of **assembly_component_usage**, **camera_model_d2**, **configuration_item**, **connectivity_definition**, **document**, **document_file**, **drawing_revision**, **drawing_sheet_revision**, **equipment_marking**, **installation_location**, **installation_section**, **installation_section_interface**, **item_designation_assignment**, **product**, **product_definition**, **product_definition_formation**, **product_definition_relationship**, **security_classification**, **signal**, **symbol_representation_map**, or **terminal**.
- An instance of **applied_classification_assignment** that has an associated **classification_role** with a **name** of ‘instance requirement’ shall reference in the role of the **assigned_class** an instance of

group with a **name** of 'product component with required instances' that is not instantiated as any of the subtypes.

— An instance of **applied_classification_assignment** that has an associated **classification_role** with a **name** of 'system composition' shall reference

- a) in the role of the **assigned_class** an instance of **class_system**;
- b) in the role of **items** only instances of **product_definition**;
- c) in the role of **items** only those instances of **product_definition** that have an associated **application_context_element** with a **name** of 'system definition'.

EXPRESS specification:

aga: the input **applied_group_assignment** to be checked.

5.2.4.6 applied_identification_assignment_correlation

The **applied_identification_assignment_correlation** function returns true if the **name** attribute value of the **identification_role** associated to instances of the **applied_identification_assignment** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

— An instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'alias' shall

a) reference in the role of **items** only instances of **approval_status**, **class_system**, **colour_representation_item**, **configuration_item**, **connectivity_definition**, **document_file**, **general_property**, **installation_node**, **installation_route**, **installation_section**, **installation_section_interface**, **notification**, **organization**, **path**, **process_variable**, **product**, **product_class**, **product_concept_feature**, **product_concept_feature_category**, **product_definition**, **property_definition**, **security_classification_level**, **terminal**, or **vertex**;

b) be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with the **name** 'version';

ISO 10303-212:2001(E)

- c) be referenced by at most one instance of **applied_organization_assignment** that has an associated **organization_role** with the **name** 'alias scope'.
- An instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'id' shall reference
- a) in the role of **items** only instances of **product**;
 - b) in the role of **items** only those instances of **product** that are referenced by exactly one instance of **product_related_product_category** with a **name** of 'accessory', 'other', 'part' or 'software'.
- An instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'inventory number' shall reference
- a) in the role of **items** only instances of **product_definition**;
 - b) in the role of **items** only those instances of **product_definition** that have an associated **application_context_element** with a **name** of 'physical instance'.
- An instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of 'version' shall reference
- a) in the role of **items** only instances of **action**, **action_directive**, **class**, **configuration_item**, **connectivity_definition**, **document_file**, **effectivity**, **general_property**, **identification_assignment**, **installation_location**, **installation_route**, **installation_section**, **installation_section_interface**, **notification**, **path**, **product_class**, **product_concept_feature**, **product_definition**, **representation**, or **signal**;
 - b) in the role of **items** only those instances of **effectivity** that are not instances of **lot_effectivity** or **serial_numbered_effectivity**;
 - c) in the role of **items** only those instances of **identification_assignment** that are instances of **applied_identification_assignment** or **item_designation_assignment**;
 - d) in the role of **items** only those instances of **applied_identification_assignment** that have an associated **identification_role** with a **name** of 'alias';
 - e) in the role of **items** only those instances of **item_designation_assignment** that have an associated **identification_role** with a **description** of 'alias'.

(*
```

Argument definitions:

apoa: the input **person_and_organization_assignment** to be checked.

5.2.4.9 aspect_ratio

The **aspect_ratio** function returns a **positive_ratio_measure** that is the ratio of length to height for a given **planar_box**.

NOTE The definition of this function is identical to the definition in ISO 10303-201, ISO 10303-202.

EXPRESS specification:

```
*)
FUNCTION aspect_ratio (p : planar_box) : positive_ratio_measure;
  RETURN (p.size_in_x / p.size_in_y);
END_FUNCTION;
(*
```

Argument definitions:

p: the input **planar_box** to be checked.

5.2.4.10 bag_to_set

This function converts BAGs into SETs.

NOTE The definition of this function is identical to the definition in ISO 10303-41.

EXPRESS specification:

```
*)
FUNCTION bag_to_set
  (the_bag : BAG OF GENERIC : intype) : SET OF GENERIC : intype;
LOCAL
  the_set : SET OF GENERIC : intype := [];
END_LOCAL;

 - a) have an associated **product** that is referenced by exactly one instance of **product_related_product_category** with a **name** of ‘document’;
 - b) be referenced only by those instances of **item_designation_assignment** that are not instances of **document_designation_assignment**, **signal_designation_assignment**, or **terminal_designation_assignment**;
 - c) be referenced by exactly one **object_reference_designation_assignment** that has an associated **identification_role** with the **description** ‘primary’.
- An instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional occurrence’ shall
 - a) have an associated **product** that is referenced by exactly one instance of **product_related_product_category** with a **name** of ‘functionality’;

- b) be referenced only by those instances of **item_designation_assignment** that are not instances of **document_designation_assignment**, **signal_designation_assignment**, or **terminal_designation_assignment**;
- c) be referenced by exactly one **object_reference_designation_assignment** that has an associated **identification_role** with the **description** 'primary';
- d) either participate as the **related_product_definition** in exactly one **product_definition_relationship** with the **name** 'definition usage' that is an instance of **product_definition_usage** where the **relating_product_definition** has an associated **application_context_element** with a **name** of 'functional definition' or shall be referenced by exactly one instance of **configuration_design** that has a **name** of 'occurrence usage definition'.
- An instance of **product_definition** that has an associated **application_context_element** with a **name** of 'part definition' shall have an associated **product** that is referenced by exactly one instance of **product_related_product_category** with a **name** of 'accessory', 'other', 'part' or 'software'.
- An instance of **product_definition** that has an associated **application_context_element** with a **name** of 'part occurrence' shall
- a) have an associated **product** that is referenced by exactly one instance of **product_related_product_category** with a **name** of 'accessory', 'other', 'part' or 'software';
- b) be referenced only by those instances of **item_designation_assignment** that are not instances of **document_designation_assignment**, **signal_designation_assignment**, or **terminal_designation_assignment**;
- c) be referenced by exactly one **object_reference_designation_assignment** that has an associated **identification_role** with the **description** 'primary';
- d) either participate as the **related_product_definition** in exactly one **product_definition_relationship** with the **name** 'definition usage' that is an instance of **product_definition_usage** where the **relating_product_definition** has an associated **application_context_element** with a **name** of 'part definition' or shall be referenced by exactly one instance of **configuration_design** that has a **name** of 'occurrence usage definition'.
- An instance of **product_definition** that has an associated **application_context_element** with a **name** of 'physical occurrence' shall
- a) have an associated **product** that is referenced by exactly one instance of **product_related_product_category** with a **name** of 'accessory', 'other', 'part' or 'software';
- b) either participate as the **related_product_definition** in exactly one **product_definition_relationship** with the **name** 'physical realization' that is an instance of **product_definition_usage** where the **relating_product_definition** has an associated **application_context_element** with a **name** of 'part definition' or shall be referenced by exactly one instance of **configuration_design** that has a **name** of 'physical instance basis'.

ISO 10303-212:2001(E)

- An instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘requirement definition’ shall have an associated **product** that is referenced by exactly one instance of **product_related_product_category** with a **name** of ‘requirement’.
- An instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘system definition’ shall
 - a) have an associated **product** that is referenced by exactly one instance of **product_related_product_category** with a **name** of ‘technical system’;
 - b) be referenced only by those instances of **item_designation_assignment** that are not instances of **document_designation_assignment**, **signal_designation_assignment**, or **terminal_designation_assignment**;
 - c) be referenced by exactly one **object_reference_designation_assignment** that has an associated **identification_role** with the **description** ‘primary’.
- An instance of **product_definition** that has a **name** of ‘physical instance’ shall
 - a) have an associated **application_context_element** with a **name** of ‘physical occurrence’;
 - b) be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of ‘inventory number’.
- An instance of **product_definition** that has a **name** of ‘quantified instance’ shall
 - a) have an associated **application_context_element** with a **name** of ‘part occurrence’;
 - b) be referenced by exactly one instance of **property_definition** that has a **name** of ‘occurrence quantity’.
- An instance of **product_definition** that has a **name** of ‘selected instance’ shall
 - a) have an associated **application_context_element** with a **name** of ‘part occurrence’;
 - b) be referenced by exactly one instance of **property_definition** that has a **name** of ‘occurrence selection control’.
- An instance of **product_definition** that has a **name** of ‘single instance’ shall have an associated **application_context_element** with a **name** of ‘functional occurrence’ or ‘part occurrence’.
- An instance of **product_definition** that has a **name** of ‘specified instance’ shall
 - a) have an associated **application_context_element** with a **name** of ‘functional occurrence’ or ‘part occurrence’;
 - b) be an instance of **specified_higher_usage_occurrence** if the associated **application_context_element** has a **name** of ‘functional occurrence’ or of ‘part occurrence’.
- An instance of **product_definition** that has a **name** of ‘final’, ‘supplier’, ‘technical’, ‘technical supplier’, ‘technical final’, ‘supplier final’, or ‘technical supplier final’ shall have an associated **application_context_element** with a **name** of ‘alternative definition’.

Argument definitions:

pd: the input **product_definition** to be checked.

5.2.4.21 product_definition_relationship_correlation

The **product_definition_relationship_correlation** function returns true if the **name** attribute value of the **product_definition_relationship** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

— An instance of **product_definition_relationship** with a **name** of ‘conceptual definition allocation’ shall reference

a) in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of either ‘functional occurrence’, ‘part occurrence’, or ‘physical occurrence’;

b) in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘conceptual definition’.

— An instance of **product_definition_relationship** with a **name** of either ‘dedicated function’ or ‘offered function’ shall reference

a) in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional definition’;

b) in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘conceptual definition’, ‘part definition’, ‘part occurrence’, or ‘physical occurrence’.

— An instance of **product_definition_relationship** with a **name** of ‘definition usage’ shall

a) be an instance of **product_definition_usage**;

b) either reference in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional definition’ and in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional occurrence’ or shall reference in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘part definition’ and in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘part occurrence’.

— An instance of **product_definition_relationship** with a **name** of ‘final specification’ shall reference

ISO 10303-212:2001(E)

a) in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'functional definition', 'part definition', or 'physical occurrence';

b) in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'alternative definition'.

— An instance of **product_definition_relationship** with a **name** of 'functional unit allocation' shall reference

a) in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'conceptual definition', 'part occurrence', or 'physical occurrence';

b) in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'functional occurrence'.

— An instance of **product_definition_relationship** with a **name** of 'physical occurrence usage' shall

a) be an instance of **assembly_component_usage**;

b) reference in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'physical occurrence';

c) reference in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'physical occurrence'.

— An instance of **product_definition_relationship** with a **name** of 'physical realization' shall

a) be an instance of **product_definition_usage**;

b) reference in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'physical occurrence';

c) reference in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'part definition'.

— An instance of **product_definition_relationship** with a **name** of 'preferred item allocation' shall reference

a) in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'functional definition' or 'part definition';

b) in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'functional occurrence'.

— An instance of **product_definition_relationship** with a **name** of 'quantified instance usage' shall

a) be an instance of **quantified_assembly_component_usage**;

- b) reference in the roles of both the **related_product_definition** and the **relating_product_definition** instances of **product_definition** that have an associated **application_context_element** with a **name** of 'part definition'.
- An instance of **product_definition_relationship** with a **name** of 'selected instance usage' shall
- a) be an instance of **assembly_component_usage**;
 - b) reference in the roles of both the **related_product_definition** and the **relating_product_definition** instances of **product_definition** that have an associated **application_context_element** with a **name** of 'part definition';
 - c) be referenced by exactly one instance of **property_definition** that has a **name** of 'occurrence selection control'.
- An instance of **product_definition_relationship** with a **name** of 'single instance usage' shall
- a) be an instance of **assembly_component_usage**;
 - b) reference in the roles of both the **related_product_definition** and the **relating_product_definition** either instances of **product_definition** that have an associated **application_context_element** with a **name** of 'functional definition' or instances of **product_definition** that have an associated **application_context_element** with a **name** of 'part definition'.
- An instance of **product_definition_relationship** with a **name** of 'solution alternative definition' shall reference
- a) in the role of the **related_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'alternative definition';
 - b) in the role of the **relating_product_definition** an instance of **product_definition** that has an associated **application_context_element** with a **name** of 'alternative definition', 'conceptual definition', or 'functional occurrence';
 - c) in the role of the **relating_product_definition** one of those instances of **product_definition** that have a **name** of 'single instance'.
- An instance of **product_definition_relationship** with a **name** of 'specified instance usage' shall
- a) be an instance of **assembly_component_usage**;
 - b) not be an instance of **specified_higher_usage_occurrence**;
 - c) reference in the roles of both the **related_product_definition** and the **relating_product_definition** either instances of **product_definition** that have an associated **application_context_element** with a **name** of 'functional definition' or instances of **product_definition** that have an associated **application_context_element** with a **name** of 'part definition'.

5.2.4.24 **property_definition_representation_correlation**

The **property_definition_representation_correlation** function returns true if the **name** attribute value of the **property_definition_representation** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

— An instance of **property_definition_representation** that has a **name** of ‘information content’ shall reference

- a) in the role of the **definition** an instance of **property_definition** that has a **name** of ‘information content’;
- b) in the role of the **used_representation** either an instance of **representation** that has a **name** of ‘property value’ or an instance of **note_representation**.

— An instance of **property_definition_representation** that has a **name** of ‘parameter association’ shall reference

- a) in the role of the **definition** an instance of **property_definition** that refers to an instance of **process_variable**;
- b) in the role of the **used_representation** an instance of **representation** that has a **name** of ‘signal value’.

— An instance of **property_definition_representation** that has a **name** of ‘trigger’ shall reference

- a) in the role of the **definition** an instance of **property_definition** that refers to an instance of **notification**;
- b) in the role of the **used_representation** an instance of **representation** that has a **name** of ‘signal value’.

pdr: the input **property_definition_representation** to be checked.

5.2.4.25 representation_correlation

The **representation_correlation** function returns true if the **name** attribute value of the **representation** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

- An instance of **representation** that has a **name** of ‘admitted qualifier’ shall
 - a) contain in its set of **items** exactly one element;
 - b) contain in its set of **items** an instance of **qualified_representation_item** that references in the role of the **qualifiers** only instances of **type_qualifier** with a **name** of either ‘nominal’, ‘specified’, or ‘typical’;
 - c) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘allowed units’ shall
 - a) reference in the role of the **context_of_items** an instance of **global_unit_assigned_context**;
 - b) be only the representation of instances of **general_property**;
 - c) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘cable pull information’ shall
 - a) be the representation of at least one instance of **shape_aspect_relationship**;
 - b) be the representation of only those instances of **shape_aspect_relationship** that have a **name** of ‘arrangement sequence’;
 - c) not be instantiated as any of its subtypes;
 - d) be referenced by at most one instance of **applied_identification_assignment** that has an associated **identification_role** with a **name** of ‘version’.
- An instance of **representation** that has a **name** of ‘direction range’ shall
 - a) contain in its set of **items** exactly two elements;
 - b) contain in its set of **items** only instances of **plane_angle_measure_with_unit**;
 - c) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘maximum angle’;
 - d) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘minimum angle’;

- e) participate as the **rep_1** in exactly one instance of **representation_relationship** that has a **name** of ‘connect area’;
 - f) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘final item characteristics’ shall
- a) contain in its set of **items** exactly two elements;
 - b) contain in its set of **items** only instances of **descriptive_representation_item**;
 - c) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘final item status’;
 - d) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘final specification’;
 - e) be the representation of instances of **product_definition** that have a **name** of either ‘final’, ‘supplier final’, ‘technical final’, or ‘technical supplier final’;
 - f) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘gis position’ shall
- a) contain in its set of **items** exactly seven elements;
 - b) contain in its set of **items** exactly one instance of **measure_representation_item** that has a **name** of ‘height’;
 - c) contain in its set of **items** exactly one instance of **measure_representation_item** that has a **name** of ‘scale’;
 - d) contain in its set of **items** exactly one instance of **measure_representation_item** that has a **name** of ‘x-axis delta x’;
 - e) contain in its set of **items** exactly one instance of **measure_representation_item** that has a **name** of ‘x-axis delta y’;
 - f) contain in its set of **items** exactly one instance of **measure_representation_item** that has a **name** of ‘x coordinate’;
 - g) contain in its set of **items** exactly one instance of **measure_representation_item** that has a **name** of ‘y coordinate’;
 - h) contain in its set of **items** exactly one instance of **descriptive_representation_item** that has a **name** of ‘zone’;
 - i) reference in the role of the **context_of_items** an instance of **geometric_representation_context**;
 - j) be the representation of instances of **installation_location**;

ISO 10303-212:2001(E)

k) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of ‘grid layout’ shall

a) contain in its set of **items** exactly three elements;

b) contain in its set of **items** only instances of **axis2_placement_2d** or **length_measure_with_unit**;

c) contain in its set of **items** exactly one instance of **length_measure_with_unit** that has a **name** of ‘delta x’;

d) contain in its set of **items** exactly one instance of **length_measure_with_unit** that has a **name** of ‘delta y’;

e) contain in its set of **items** exactly one instance of **axis2_placement_2d** that has a **name** of ‘grid origin’;

f) contain in its set of **items** an instance of **axis2_placement_2d** where the value for **ref_direction** is not present;

g) reference in the role of the **context_of_items** an instance of **geometric_representation_context** that is a 2D coordinate space;

h) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of ‘linear pattern location’ shall

a) contain in its set of **items** exactly two elements;

b) contain in its set of **items** only instances of **axis2_placement_3d** or **length_measure_with_unit**;

c) contain in its set of **items** exactly one instance of **length_measure_with_unit** that has a **name** of ‘pattern location distance’;

d) contain in its set of **items** exactly one instance of **axis2_placement_2d** that has a **name** of ‘pattern start location’;

e) reference in the role of the **context_of_items** an instance of **geometric_representation_context** that is a 3D coordinate space;

f) be the representation of instances of **equipment_marking**;

g) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of ‘marking location’ shall

a) contain in its set of **items** exactly one element;

b) contain in its set of **items** only instances of **axis2_placement_3d**;

- c) reference in the role of the **context_of_items** an instance of **geometric_representation_context** that is a 3D coordinate space;
 - d) be the representation of instances of **equipment_marking**;
 - e) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘notification message’ shall
- a) contain in its set of **items** exactly one element;
 - b) contain in its set of **items** only instances of **descriptive_representation_item**;
 - c) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘message text’;
 - d) be the representation of instances of **notification**;
 - e) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘property specification’ shall
- a) contain in its set of **items** at most three elements;
 - b) contain in its set of **items** only instances of **descriptive_representation_item**;
 - c) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘definition’;
 - d) contain in its set of **items** at most one **representation_item** that has a **name** of ‘note’;
 - e) contain in its set of **items** at most one **representation_item** that has a **name** of ‘remark’;
 - f) be the representation of exactly one instance of **general_property**;
 - g) be referenced by at most one instance of **language_assignment** that has an associated **classification_role** with a **name** of ‘language’ and that has an **assigned_class** with a **description** of ‘ISO 639-2 language code’;
 - h) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘property value’ shall
- a) contain in its set of **items** exactly one element;
 - b) be the representation of exactly one instance of **general_property**;
 - c) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘property value format’ shall
- a) contain in its set of **items** at most three elements;
 - b) contain in its set of **items** only instances of **descriptive_representation_item**;

ISO 10303-212:2001(E)

- c) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘value format’;
 - d) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘source document’;
 - e) be the representation of exactly one instance of **general_property**;
 - f) be referenced by at most one instance of **language_assignment** that has an associated **classification_role** with a **name** of ‘language’ and a **description** of ‘default’ and that has an **assigned_class** with a **description** of ‘ISO 639-2 language code’;
 - g) be the representation of exactly one instance of **general_property**;
 - h) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘quantity’ shall
- a) contain in its set of **items** exactly one element;
 - b) contain in its set of **items** only instances of **measure_representation_item**;
 - c) contain in its set of **items** exactly one **representation_item** that has a **name** of ‘quantity measure’;
 - d) be the representation of instances of **property_definition** with a **name** of ‘occurrence quantity’ that reference an instance of **product_definition** with a **name** of ‘quantified instance’;
 - e) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘schematic node connect area’ shall
- a) contain in its set of **items** only instances of **cartesian_point**, **composite_curve**, **polyline**, or **trimmed_curve**;
 - b) reference in the role of the **context_of_items** an instance of **geometric_representation_context** that is a 2D coordinate space;
 - c) not be instantiated as any of its subtypes.
- An instance of **representation** that has a **name** of ‘selection criteria’ shall
- a) contain in its set of **items** exactly two elements;
 - b) contain in its set of **items** only instances of **descriptive_representation_item** or **measure_representation_item**;
 - c) contain in its set of **items** exactly one instance of **descriptive_representation_item** that has a **name** of ‘selection control’;
 - d) contain in its set of **items** exactly one instance of either **compound_representation_item** or **measure_representation_item** that has a **name** of ‘selection quantity’;

e) be the representation of instances of **property_definition** with a **name** of ‘occurrence selection control’ that reference either an instance of **assembly_component_usage** with a **name** of ‘selected instance usage’ or an instance of **product_definition** with a **name** of ‘selected instance’;

f) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of ‘section interface parameters’ shall

a) contain in its set of **items** only instances of **area_measure_with_unit** or **ratio_measure_with_unit**;

b) contain in its set of **items** only instances of **area_measure_with_unit** that have a **name** of ‘cross section area’;

c) contain in its set of **items** only instances of **ratio_measure_with_unit** that have a **name** of ‘space factor’;

d) be the representation of instances of **installation_section_interface**;

e) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of ‘section parameters’ shall

a) contain in its set of **items** only instances of **area_measure_with_unit**, **length_measure_with_unit**, or **ratio_measure_with_unit**;

b) contain in its set of **items** only instances of **area_measure_with_unit** that have a **name** of ‘cross section area’;

c) contain in its set of **items** only instances of **length_measure_with_unit** that have a **name** of either ‘bending radius’ or ‘section length’;

d) contain in its set of **items** only instances of **ratio_measure_with_unit** that have a **name** of ‘space factor’;

e) be the representation of instances of **installation_section**;

f) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of ‘signal characteristics’ shall

a) contain in its set of **items** exactly one element;

b) contain in its set of **items** an instance of **descriptive_representation_item** that has a **name** of ‘signal level indicator’;

c) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of ‘signal value’ shall

a) have an associated **id_attribute**;

ISO 10303-212:2001(E)

- b) be the representation of exactly one instance of **signal**;
- c) be referenced by at most one instance of **property_definition_representation** that has a **name** of 'parameter association';
- d) not be instantiated as any of its subtypes.

— An instance of **representation** that has a **name** of 'supplier probability' shall

- a) contain in its set of **items** exactly one element;
- b) contain in its set of **items** only instances of **ratio_measure_with_unit**;
- c) contain in its set of **items** exactly one **representation_item** that has a **name** of 'probability rate';
- d) be the representation of instances of **product_definition** that have a **name** of either 'supplier', 'supplier final', 'technical supplier', or 'technical supplier final';
- e) not be instantiated as any of its subtypes.

Argument definitions:

rep: the input **representation** to be checked.

5.2.4.26 representation_item_correlation

The **representation_item_correlation** function returns true if the **name** attribute value of the **representation_item** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

ISO 10303-212:2001(E)

— An instance of **representation_item** with a **name** of ‘component colour’ shall be an instance of **colour_representation_item**.

— An instance of **representation_item** with a **name** of either ‘material specification’ or ‘mounting features specification’ shall

- a) be an instance of **descriptive_representation_item**;
- b) not be an instance of **colour_representation_item**.

— An instance of **representation_item** with a **name** of either ‘rated current’, ‘rated power’, or ‘rated voltage’ shall

- a) be an instance of **measure_representation_item** and **qualified_representation_item**;
- b) contain in its set of **qualifiers** at least one and at most two elements;
- c) contain in its set of **qualifiers** only instances of **type_qualifier**.

— An instance of **representation_item** with a **name** of either ‘body breadth’, ‘body height’, ‘body length’, ‘cross section area’, ‘mass’, ‘operating temperature’, ‘storage temperature’, or ‘outside diameter’

- a) shall be an instance of **measure_representation_item**;
- b) shall, if it is an instance of **qualified_representation_item**, contain in its set of **qualifiers** exactly one element that is an instance of **type_qualifier**.

— An instance of **representation_item** with a **name** of either ‘body breadth’, ‘body height’, ‘body length’, ‘component colour’, ‘cross section area’, ‘mass’, ‘material specification’, ‘operating temperature’, ‘storage temperature’, ‘mounting features specification’, ‘outside diameter’, ‘rated current’, ‘rated power’, or ‘rated voltage’ shall

- a) be referenced in the role of **items** by exactly one instance of **representation**;
- b) share its **name** with the instance of **general_property** that is associated to the referencing instance of **representation**.

5.2.4.27 **representation_relationship_correlation**

The **representation_relationship_correlation** function returns true if the **name** attribute value of the **representation_relationship** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

- An instance of **representation_relationship** with a **name** of ‘connect area’ shall
 - a) reference in the role of the **rep_1** an instance of **representation** that has a **name** of ‘direction range’;
 - b) reference in the role of the **rep_2** an instance of **representation** that has a **name** of ‘schematic node connect area’.
- An instance of **representation_relationship** with a **name** of either ‘definitional’, ‘non definitional’, or ‘’ (empty string) shall
 - a) reference in the role of the **rep_1** an instance of **representation** that has a **name** of ‘property value’;
 - b) reference in the role of the **rep_2** either an instance of **drawing_sheet_revision** or **note_representation** or an instance of **representation** that has either a **name** of ‘cable pull information’ or ‘signal value’ or that contains its set of **items** instances of **path** or **vertex**.
- An instance of **representation_relationship** with a **name** of ‘instance placement’ shall
 - a) be an instance of **shape_representation_relationship** and **representation_relationship_with_transformation**;
 - b) reference in the roles of the **rep_1** and the **rep_2** instances of **representation** that are representations of instances of **product_definition**;
 - c) reference in the role of the **rep_1** an instance of **representation** that represents a **product_definition** with a **name** of ‘single instance’;
 - d) reference in the role of the **rep_2** an instance of **representation** that represents a **product_definition** that has an associated **application_context_element** with a **name** of ‘conceptual definition’.
- An instance of **representation_relationship** with a **name** of ‘node area’ shall

ISO 10303-212:2001(E)

- a) reference in the role of the **rep_1** an instance of **draughting_symbol_representation**;
 - b) reference in the role of the **rep_2** an instance of **representation** that has a **name** of 'schematic node connect area'.
- An instance of **representation_relationship** with a **name** of 'note presentation reference' shall reference
- a) in the role of the **rep_1** an instance of **presentation_with_association**;
 - b) in the role of the **rep_2** an instance of **presentation_with_association**;
 - c) in the role of the **rep_2** an instance of **presentation_with_association** that participates as the **presentation** in a **presented_item_representation** where the **item** references an instance of **presented_item_with_association** that contains in its set of **items** an instance of **note_representation**.
- An instance of **representation_relationship** with a **name** of 'note representation set' shall reference in the roles of the **rep_1** and the **rep_2** instances of **note_representation**.
- An instance of **representation_relationship** with a **name** of 'reference grid' shall
- a) reference in the role of the **rep_1** an instance of **reference_grid_layout**;
 - b) reference in the role of the **rep_2** an instance of **reference_grid_representation**.
- An instance of **representation_relationship** with a **name** of 'schematic node ownership' shall reference in the roles of the **rep_1** and the **rep_2** instances of **representation** that contains in its set of **items** an instance of **annotation_symbol_occurrence**.
- An instance of **representation_relationship** with a **name** of 'schematic text ownership' shall
- a) reference in the role of the **rep_1** an instance of **annotation_text_occurrence**;
 - b) reference in the role of the **rep_2** an instance of **representation** that contains in its set of **items** an instance of **annotation_symbol_occurrence**.

rr: the input **representation_relationship** to be checked.

5.2.4.28 shape_aspect_relationship_correlation

The **shape_aspect_relationship_correlation** function returns true if the **name** attribute value of the **shape_aspect_relationship** entity is coordinated with other elements of product data required to satisfy the information requirements of this part of ISO 10303.

In particular, this function returns true, if the following constraints are satisfied:

— For an instance of **shape_aspect_relationship** with a **name** of ‘arrangement sequence’

- a) the **related_shape_aspect** shall be an instance of either **free_segment** or **routed_segment**;

- b) the **relating_shape_aspect** shall be either an instance of **connectivity_definition** or an instance of **shape_aspect** that is associated to a **product_definition** that has an associated **application_context_element** with a **name** of either ‘conceptual definition’, ‘functional occurrence’, ‘part occurrence’, or ‘physical occurrence’.
- For an instance of **shape_aspect_relationship** with a **name** of ‘connectivity’
- a) the **relating_shape_aspect** shall be an instance of **connectivity_definition**;
- b) the **related_shape_aspect** shall be an instance of **terminal**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘connectivity allocation’
- a) the **relating_shape_aspect** shall be an instance of **connectivity_definition** that is the **shape_aspect** of a **product_definition** that has an associated **application_context_element** with a **name** of ‘functional definition’;
- b) the **related_shape_aspect** shall be an instance of **connectivity_definition** that is the **shape_aspect** of a **product_definition** that has an associated **application_context_element** with a **name** of ‘part definition’.
- For an instance of **shape_aspect_relationship** with a **name** of ‘course sequence’
- a) the **related_shape_aspect** shall be an instance of either **installation_node**, **installation_route**, **installation_section**, or **installation_section_interface**;
- b) the **relating_shape_aspect** shall be an instance of **routed_segment**.
- An instance of **shape_aspect_relationship** with a **name** of ‘correspondence’ shall
- a) reference in the role of both the **related_shape_aspect** and the **relating_shape_aspect** instances of **terminal**;
- b) reference in the role of the **related_shape_aspect** a **shape_aspect** of an instance of **product_definition** that has a **name** of ‘single instance’.
- c) either reference in the role of the **relating_shape_aspect** a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional definition’ and in the role of the **related_shape_aspect** a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional occurrence’ or shall reference in the role of the **relating_shape_aspect** a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘part definition’ and in the role of the **related_shape_aspect** a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘part occurrence’.
- For an instance of **shape_aspect_relationship** with a **name** of ‘decomposition hierarchy’ both the **related_shape_aspect** and the **relating_shape_aspect** shall reference instances of **installation_location**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘node residence’

ISO 10303-212:2001(E)

- a) the **related_shape_aspect** shall be an instance of **installation_location**;
- b) the **relating_shape_aspect** shall be an instance of **installation_node**.

— For an instance of **shape_aspect_relationship** with a **name** of ‘external access’

- a) the **related_shape_aspect** shall be an instance of **terminal**;
- b) the **relating_shape_aspect** shall be an instance of **interface**;
- c) the **related_shape_aspect** shall be a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of either ‘functional definition’ or ‘part definition’;
- d) the **relating_shape_aspect** shall be a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of either ‘functional definition’ or ‘part definition’;
- e) the **relating_shape_aspect** shall be a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional definition’ if the **related_shape_aspect** is a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional definition’ and vice versa;
- f) the **relating_shape_aspect** shall be a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘part definition’ if the **related_shape_aspect** is a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘part definition’ and vice versa;

— For an instance of **shape_aspect_relationship** with a **name** of ‘preferred item terminal allocation’

- a) the **related_shape_aspect** shall be an instance of **terminal**;
- b) the **relating_shape_aspect** shall be an instance of **terminal**;
- c) the **relating_shape_aspect** shall be a **shape_aspect** of an instance of **product_definition** that has a **name** of ‘single instance’;
- d) the **related_shape_aspect** shall be a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of either ‘functional definition’ or ‘part definition’;
- f) the **relating_shape_aspect** shall be a **shape_aspect** of an instance of **product_definition** that has an associated **application_context_element** with a **name** of ‘functional occurrence’;
- g) there shall be exactly one instance of **property_definition_relationship** with a **name** of ‘item allocation’ where the **related_property_definition** references an instance of **property_definition** that refers to this instance of **shape_aspect_relationship**.

— For an instance of **shape_aspect_relationship** with a **name** of ‘route course sequence’

- a) the **related_shape_aspect** shall be an instance of either **installation_node**, **installation_section**, or **installation_section_interface**;

- b) the **relating_shape_aspect** shall be an instance of **installation_route**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘section end residence’
 - a) the **related_shape_aspect** shall be an instance of **installation_node**;
 - b) the **relating_shape_aspect** shall be an instance of **installation_section_end**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘section interface residence’
 - a) the **related_shape_aspect** shall be an instance of **installation_node**;
 - b) the **relating_shape_aspect** shall be an instance of **installation_section_interface**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘section join’
 - a) the **related_shape_aspect** shall be an instance of **installation_section_end**;
 - b) the **relating_shape_aspect** shall be an instance of **installation_section_interface**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘section termination’
 - a) the **related_shape_aspect** shall be an instance of **installation_section**;
 - b) the **relating_shape_aspect** shall be an instance of **installation_section_end**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘segment termination’
 - a) the **related_shape_aspect** shall be an instance of **installation_node**;
 - b) the **relating_shape_aspect** shall be an instance of **free_segment**.
- For an instance of **shape_aspect_relationship** with a **name** of ‘terminal allocation’
 - a) the **related_shape_aspect** shall be an instance of **terminal**;
 - b) the **relating_shape_aspect** shall be an instance of **terminal**;

6 Conformance requirements

Conformance to this part of ISO 10303 includes satisfying the requirements stated in this part, the requirements of the implementation methods supported, and the relevant requirements of the normative references.

An implementation shall support at least one of the following implementation methods:

- ISO 10303-21;
- ISO 10303-22.

Requirements with respect to implementation are specified in annex C.

The Protocol Information Conformance Statement (PICS) proforma lists the options or the combinations of options that may be included in the implementation. The PICS proforma is provided in annex D.

This part of ISO 10303 provides for a number of options that may be supported by an implementation. These options have been grouped into the following conformance classes:

- Class 1: Design_physical_characterization;
- Class 2: Design_characterization;
- Class 3: Spatial_arrangement;
- Class 4: Design_characterization_and_spatial_arrangement;
- Class 5: Spatial_arrangement_and_configuration_data;
- Class 6: Documented_design_characterization;
- Class 7: Documented_item_characterization;
- Class 8: Complete_system_characterization;
- Class 9: Product_structure_and_work_management_data;
- Class 10: Design_structure_and_work_management_data;
- Class 11: Location_information_and_work_management_data;
- Class 12: Design_structure_and_configuration_data;
- Class 13: Item_structure_and_configuration_data;
- Class 14: Documented_design_structure_and_configuration_data;
- Class 15: Documented_item_structure_and_configuration_data.

Support for a particular conformance class requires support of all the options specified in that class. All entities specified, either directly or indirectly, by required attributes of the required AIM entities shall be supported.

Conformance to a particular class requires that all AIM elements defined as part of that class be supported. Table 29 defines the classes to which each AIM element belongs.

Table 28 specifies the combinations of UoFs supporting each conformance class.

NOTE ISO 10303-312¹⁾ defines the abstract test suite to be used in the assessment of conformance. ISO 10303-32 describes the conformance assessment process.

The conformance classes are characterized as follows:

6.1 Design_physical_characterization (CC 1)

This data includes all of the information about the assembly structure of pieces of equipment, including its connectivity, classification information, properties and references to external documentation. Data about the organizations involved, approval status, date and time stamps is also included. References to shape information is part of the scope of this conformance class.

6.2 Design_characterization (CC 2)

The scope and content of CC 2 is additionally to the content of CC 1. It adds data about function hierarchy, functional connectivity, and the allocation between the physical and functional aspect of a product. Information about the design rationale is provided. The information flow within the system is also part of the scope of this conformance class.

6.3 Spatial_arrangement (CC 3)

The scope and content of CC 3 is additionally to the content of CC 1. It adds data about the arrangement of products. This includes information about routes and cabletrays, positioning data, and site information. Information about the design rationale is provided.

6.4 Design_characterization_and_spatial_arrangement (CC 4)

The scope and content of CC 4 is additionally to the content of CC 2. It adds data about the arrangement of products. This includes information about routes and cabletrays, positioning data, and site information. This conformance class provides a complete specification of a technical system that comprises the functional and physical aspects of a system including location related data. Work flow related information and configuration controlled design data are not in the scope of this conformance class.

6.5 Spatial_arrangement_and_configuration_data (CC 5)

The scope and content of CC 5 is additionally to the content of CC 3. It adds data for configuration controlled design, effectivity data, and work flow related information.

¹⁾ To be published.

6.6 Documented_design_characterization (CC 6)

The scope and content of CC 6 is additionally to the content of CC 2. It adds data that are needed for the pictorial representation of the systems design. Documentation that uses two-dimensional schematic diagrams is included in the scope of this conformance class.

6.7 Documented_item_characterization (CC 7)

The scope and content of CC 7 is additionally to the content of CC 4. It adds data that are needed for the pictorial representation of the systems design. Documentation that uses two-dimensional dimensioned drawings is included in the scope of this conformance class.

6.8 Complete_system_characterization (CC 8)

The scope and content of CC 8 is additionally to the content of CC 7. It adds work flow related information, effectivity_data, and configuration controlled design data. This conformance class comprises the full functionality of this part of ISO 10303.

6.9 Product_structure_and_work_management_data (CC 9)

This data includes all of the information about the assembly structure of pieces of equipment, including classification information, properties and references to external documentation. Data about the organizations involved, approval status, date and time stamps is also included. References to shape information and work flow related data is part of the scope of this conformance class. Connectivity information is not in the scope of this conformance class.

6.10 Design_structure_and_work_management_data (CC 10)

The scope and content of CC 10 is additionally to the content of CC 9. It adds data about function hierarchy and the allocation between the physical and functional aspect of a product. Information about the design rationale and the information flow within the system is not part of the scope of this conformance class.

6.11 Location_information_and_work_management_data (CC 11)

The scope and content of CC 11 is additionally to the content of CC 9. It adds data about the location of products. This includes positioning data and site information. Routing information is not part of the scope of this conformance class.

6.12 Design_structure_and_configuration_data (CC 12)

The scope and content of CC 12 is additionally to the content of CC 10. It adds configuration controlled design data.

6.13 Item_structure_and_configuration_data (CC 13)

The scope and content of CC 13 is additionally to the content of CC 12. It adds data about the location of products.

6.14 Documented_design_structure_and_configuration_data (CC 14)

The scope and content of CC 14 is additionally to the content of CC 12. It adds data that are needed for the pictorial representation of the system design. Documentation that uses two-dimensional schematic diagrams is included in the scope of this conformance class.

6.15 Documented_item_structure_and_configuration_data (CC 15)

The scope and content of CC 15 is additionally to the content of CC 13. It adds data that are needed for the pictorial representation of the system design. Documentation that uses two-dimensional dimensioned drawings is included in the scope of this conformance class.

Annex C

(normative)

Implementation method specific requirements

The implementation method defines what types of exchange behaviour are required with respect to this part of ISO 10303. Conformance to this part of ISO 10303 shall be realized in an exchange structure. The file format shall be encoded according to the syntax and EXPRESS language mapping defined in ISO 10303-21 and in the AIM defined in annex A of this part of ISO 10303. The header of the exchange structure shall identify use of this part of ISO 10303 by the schema name 'electrotechnical_design_and_installation'.

Annex D

(normative)

Protocol Implementation Conformance Statement (PICS) proforma

This clause lists the optional elements of this part of ISO 10303. An implementation may choose to support any combination of these optional elements. However, certain combinations of options are likely to be implemented together. These combinations are called conformance classes and are described in the subclauses of this annex.

This annex is in the form of a questionnaire. This questionnaire is intended to be filled out by the implementor and may be used in preparation for conformance testing by a testing laboratory. The completed PICS proforma is referred to as a PICS.

NOTE The framework for conformance testing is given in ISO 10303-31 (Conformance testing methodology and framework: General concepts) and ISO 103303-32 (Conformance testing methodology and framework: Requirements on testing laboratories and clients). Refer to Clause 6 of this part of ISO 10303 for the conformance requirements. Refer to ISO 10303-312¹ (Abstract test suite: Electrotechnical design and installation) for the test purposes and test cases relevant for the conformance testing of an ISO 10303-212 implementation.

A number of options are identified in this standard for possible use by conforming implementations. Some of these options may be dynamically (run-time) selected for use or non-use, for instance, OPTIONAL attributes of an entity. Others shall be statically (configuration-time) selected for use or non-use, such as a particular style of geometry as defined in a conformance class.

Questions:

For simplicity of reference, an identifier for the product or system with which the tested STEP implementation is packaged in or procured by is required.

1. Product or system identifier (or name): _____

A conforming implementation shall support at least one conformance class. Fifteen conformance classes are identified in this part of ISO 10303. Each class specifies a subset of ISO/IEC 10303-212 AIM constructs. These classes are identified in clause 6 of this part of ISO 10303.

2. Please indicate the classes for which conformance is claimed:

- Class 1: Design_physical_characterization
- Class 2: Design_characterization
- Class 3: Spatial_arrangement
- Class 4: Design_characterization_and_spatial_arrangement
- Class 5: Spatial_arrangement_and_configuration_data

¹ To be published.

ISO 10303-212:2001(E)

- Class 6: Documented_design_characterization
- Class 7: Documented_item_characterization
- Class 8: Complete_system_characterization
- Class 9: Product_structure_and_work_management_data
- Class 10: Design_structure_and_work_management_data
- Class 11: Location_information_and_work_management_data
- Class 12: Design_structure_and_configuration_data
- Class 13: Item_structure_and_configuration_data
- Class 14: Documented_design_structure_and_configuration_data
- Class 15: Documented_item_structure_and_configuration_data

Conformance to this part of ISO 10303 may be realized in one or more of several different implementation methods. The implementation methods define what types of implementation behaviour are required with respect to this part of ISO 10303.

3. Please indicate the claimed implementation forms:

- Implementation methods: Clear text encoding of the exchange structure (ISO 10303-21)
- Implementation methods: Standard data access interface specification (ISO 10303-22)

If the implementation receives data that do not comply with the requirements in this part of ISO 10303 for the selected conformance class(es), or with the requirements of the 20's series of parts of ISO 10303 for the selected implementation method, it shall execute a default response. A default response shall be statically set.

4. Default response: _____

A conforming implementation shall maintain the static options selected throughout subsequent dynamic assessment (testing) without required modification. In a user environment, a conforming implementation shall permanently maintain the provision of selected static options, or it shall provide users discretionary control over the changing and setting of the static options, or both (depending on the option).

5. Does the implementation under test (IUT) provide any user discretion over the changing and setting of the static options ?

Yes or No: _____

6. If yes, which ones ?

a) Conformance class(es): _____

b) Default response: _____

A statement of conformance shall include identification of at least one party deeming conformance for the implementation.

7. Evaluator(s) (tester or certifier or accreditor): _____

Annex E

(normative)

Information object registration

E.1 Document identification

In order to provide for unambiguous identification of an information object in an open system, the object identifier

{ iso standard 10303 part(212) version(0) }

is assigned to this part of ISO 10303. The meaning of this value is defined in ISO/IEC 8824-1, and is described in ISO 10303-1.

E.2 Schema identification

To provide for unambiguous identification of the schema specifications given in this application protocol Electrotechnical-design schema in an open information system, object identifiers are assigned as follows:

{ iso standard 10303 part(212) version(0) object(1) electrotechnical-design-schema }

is assigned to the Electrotechnical-design schema expanded schema (see annex A).

The meaning of these values is defined in ISO/IEC 8824-1, and is described in ISO 10303-1.

Annex F

(informative)

Application activity model

The application activity model (AAM) is provided as an aid to understanding the scope and information requirements defined in this application protocol. The model is presented as a set of figures that contain the activity diagrams and a set of definitions of the activities and their data. The application activity model is given in Figures F.1 through F.7. Activities and data flows that are out of scope are marked with an asterisk.

The viewpoint of the application activity model is that of the supplier of an electrotechnical system who has the responsibility of designing, implementing, and delivering an electrotechnical system. For the purpose of this part of ISO 10303 it is irrelevant whether or not the associated activities are performed by the supplier of the system himself or by subcontractors.

F.1 Application activity model definitions and abbreviations

The following terms are used in the application activity model. Terms marked with an asterisk are outside the scope of this application protocol.

The definitions given in this annex do not supersede the definitions given in the main body of the text.

F.1.1 Available components: the components that are available to be used in the electrotechnical industrial system.

EXAMPLE Due to delivery failures particular components cannot be used to implement a design at a given point in time. Those components are not part of the available components list.

NOTE See Figure F.6 for the context.

F.1.2 Budgets *: framework of estimated expenses with respect to time, finance, material, and labour.

NOTE See Figures F.2, F.3, and F.4 for the context.

F.1.3 Change request: any formal or informal request to modify an existing design or concept.

NOTE See Figures F.2, F.4, F.5, F.6, and F.7 for the context.

F.1.4 Components: parts or pieces of equipment used in the electrotechnical system.

NOTE See Figures F.1, F.2, and F.6 for the context.

F.1.5 Component test reports: Documents or data verifying tested characteristics of a component.

ISO 10303-212:2001(E)

NOTE 1 In many cases the test reports are produced by using specific testing or simulation systems. Even though test and simulation is out of scope of this part of ISO 10303 the test reports may be referenced by using the concepts of the external_reference UoF.

NOTE 2 See Figure F.6 for the context.

F.1.6 Conduct inquiry (AAM A11): the activities taken to investigate whether a vendor offers electrotechnical systems that meet the requirements of the customer.

NOTE See Figure F.3 for the context.

F.1.7 Contract: an agreement between two or more parties, intended to be enforceable by law.

NOTE See Figures F.2, F.3, and F.4 for the context.

F.1.8 Contracted list of requirements: list of requirements as laid down in the contract.

NOTE See Figures F.2, F.3, and F.4 for the context.

F.1.9 Contracted system: an electrotechnical system that represents the technical content of the contract.

NOTE See Figures F.2, F.3, and F.4 for the context.

F.1.10 Customer requirements: needs, specifications, or demands concerning design, operation, or any other aspect of the electrotechnical system as laid down by the customer.

NOTE See Figures F.1, F.2, and F.3 for the context.

F.1.11 Design requirements: the specific requirements the design must fulfill. These requirements are refinements of the more general contract requirements.

NOTE See Figure F.5 for the context.

F.1.12 Design system (AAM A31): the activities to develop a detailed design of the system based on the results of the conceptual design activities.

NOTE 1 This activity comprises all sub-activities needed to specify how a system needs to be implemented to meet the requirements laid down in the system's specification.

NOTE 2 See Figure F.5 for the context.

F.1.13 Detailed list of requirements: a document containing the complete set of requirements the electrotechnical system has to fulfill.

NOTE 1 This set of requirements includes the contracted list of requirements as a subset. This document does not reflect on the realization of those requirements.

NOTE 2 See Figure F.4 for the context.

F.1.14 Develop conceptual design (AAM A2): the sub-activities associated with transforming a customer's requirement or request from ideas to a conceptual design.

NOTE See Figure F.2 for the context.

F.1.15 Develop specification (AAM A24): the sub-activities associated with the process of making a specification.

NOTE See Figure F.4 for the context.

F.1.16 Develop system (AAM A3): the engineering activities that perform the detailed design and the analyses to verify aspects of performance of the design in its intended environment. The activities required to transform the conceptual design into an implementable electrotechnical system are within this activity.

NOTE See Figure F.2 for the context.

F.1.17 Do detailed planning (AAM A21): the sub-activities associated with the process of working out or updating detailed budgets, schedules, workloads and the like.

NOTE See Figure F.4 for the context.

F.1.18 Document system design (AAM A32): the activities needed to describe the specifics of the system.

NOTE See Figure F.5 for the context.

F.1.19 Documentation: documentation subsumes the information and data used to describe any aspect of the system.

NOTE 1 Parts of the documentation will be handed over to the customer as instruction manuals or training material.

NOTE 2 In many cases the documentation is produced by using desktop publishing systems. Even though the data created by those systems can be structured in a way that is not supported by this part of ISO 10303 such data may be referenced by using the concepts of the external_-reference UoF.

EXAMPLE Paper documents, SGML- files, Postscript- files, or mock-ups are examples for documentation.

NOTE 3 See Figure F.1, F.2, and F.5 for the context.

F.1.20 Electrotechnical system as delivered: an electrotechnical system that is in a state where the commissioning and the hand over to the customer has taken place.

NOTE See Figures F.1, F.2, and F.7 for the context.

F.1.21 Engineer electrotechnical system (AAM A0): the sub-activities to design, erect or validate an electrotechnical system.

ISO 10303-212:2001(E)

NOTE 1 In most cases subcontractors perform some of the related activities. This is due to the current business practice to set up contractual relationships between the organizational units that collaborate in the engineering of a system. This part of ISO 10303 supports the related data regardless whether or not the activity is performed by a subcontractor.

NOTE 2 See Figure F.1 for the context.

F.1.22 Erect system (AAM 42): any actions to be taken to assemble and to put up the equipment using the available components.

NOTE See Figure F.6 for the context.

F.1.23 Explanatory documents: any material or documentation intended to explain the design or technology of the system or any other related matter.

NOTE 1 In many cases explanatory documents are produced by using desktop publishing systems. Even though the data created by those systems may be structured in a way that is not supported by this part of ISO 10303 such data may be referenced by using the concepts of the external_reference UoF.

NOTE 2 See Figure F.3 for the context.

F.1.24 Function describing data: documents or data describing the function of an electrotechnical system or portions thereof, like circuit diagrams, function diagrams, signal lists.

NOTE See Figure F.5 for the context.

F.1.25 Functional overview: documents or data giving an overview about the functional building blocks and their structural breakdown.

NOTE See Figure F.4 for the context.

F.1.26 Guidelines *: principles or criteria guiding or directing the various activities throughout the process of designing the system.

NOTE See Figures F.2 and F.4 for the context.

F.1.27 Identify system (AAM A1): the sub-activities required to identify new electrotechnical systems.

NOTE 1 The activities can be initiated from within the enterprise or as the result of an external customer request or requirement.

NOTE 2 See Figure F.2 for the context.

F.1.28 Implement system (AAM A4): the activities associated with the process of realizing the system's design.

NOTE See Figure F.2 for the context.

F.1.29 Install system (AAM A51): any actions to be taken to achieve the product as installed - milestone.

NOTE 1 In many cases specific settings need to be performed to ensure that the system as a whole meets the functionality and performance requirements of the customer.

NOTE 2 See Figure F.7 for the context.

F.1.30 Instruction manuals: any documents and data used to inform the end-user how to operate or maintain the system.

NOTE 1 In many cases instruction manuals are produced by using desktop publishing systems. Even though the data created by those systems may be structured in a way that is not supported by this part of ISO 10303 such data may be referenced by using the concepts of the external_ -reference UoF.

NOTE 2 See Figure F.5 for the context.

F.1.31 List of allowed components: a list of the parts or products that are allowed to be used in the design of the system.

EXAMPLE Customer requirements or environmental considerations can lead to the exclusion of particular products from the list of allowed components.

NOTE See Figures F.2, F.4, and F.5 for the context.

F.1.32 List of available components: a list of those parts and products that are available for use in the design of the system.

EXAMPLE Due to delivery failures a particular motor was deleted from the list of available components. It was replaced by a substitute.

NOTE 2 See Figure F.5 for the context.

F.1.33 List of requirements: a relatively precise list of features, capabilities and other parameters specifying the desired design of the system.

NOTE See Figure F.3 for the context.

F.1.34 Location describing data: documents or data mainly describing the topographical or geometrical position of electrotechnical systems or portions thereof.

EXAMPLE Assembly drawings describing geometric placement of components and cable routing diagrams providing information about the cableways.

NOTE See Figure F.5 for the context.

F.1.35 Location-on-site data: data providing information about the location of facilities on site.

NOTE See Figures F.1, F.2, and F.5 for the context.

F.1.36 Make contract (AAM A13): the sub-activities that lead to a contractual agreement between customer and vendor of an electrotechnical system.

ISO 10303-212:2001(E)

NOTE See Figure F.3 for the context.

F.1.37 Make detailed list of requirements (AAM A22): the sub-activities that are associated to the process of detailing the initial list of requirements to work out a binding basis for the subsequent design process.

NOTE See Figure F.4 for the context.

F.1.38 Make offer (AAM A12): the sub-activities associated to the process of making an offer.

NOTE See Figure F.3 for the context.

F.1.39 Management issues *: data about the different activities throughout the completion of the design process of the system.

EXAMPLE Examples include plans and schedules concerning resources, personnel, cost, material, and time.

NOTE See Figures F.2 and F.4 for the context.

F.1.40 Material *: any material used in the process of designing and manufacturing the equipment.

NOTE See Figures F.1, F.2, and F.6 for the context.

F.1.41 Negotiated changes: any modification that is the result of consultations between customer and supplier.

NOTE See Figure F.3 for the context.

F.1.42 Offer *: proposal of the supplier to solve the customers requirements.

NOTE See Figure F.3 for the context.

F.1.43 Offered system: an electrotechnical system that represents the technical content of the offer.

NOTE See Figure F.3 for the context.

F.1.44 Order components from subcontractor (AAM A33): any action to be taken to procure the products required to implement the system.

NOTE See Figure F.5 for the context.

F.1.45 Orders to subcontractors: data about the ordered items and the related contracts.

EXAMPLE Examples include kind of ordered items, number, contractor, or identifier of the assigned contract.

NOTE See Figures F.2, F.5, and F.6 for the context.

F.1.46 Parts list: data on the items that make up the system.

NOTE See Figure F.5 for the context.

F.1.47 People and machines *: any people and machinery used to design or to manufacture the system.

EXAMPLE Examples include workers, engineers, managers, and machine-tools.

NOTE See Figure F.1 for the context.

F.1.48 Product describing data: the documentation or data that characterizes the equipment used in the system.

EXAMPLE The documentation may include information like the assembly hierarchy of products, bill-of-material, spare parts, label lists, assembly and installation instructions.

NOTE See Figure F.5 for the context.

F.1.49 Promotional material *: any material that supports the offer of the supplier and helps to convince the customer to buy the offered equipment.

NOTE See Figure F.3 for the context.

F.1.50 Put system into operation (AAM A5): the activities associated with the start-up and commissioning of the system.

NOTE See Figure F.2 for the context.

F.1.51 Receive ordered components (AAM A41): any actions to be taken to receive and to administer the procured components.

NOTE 1 This activity includes the sub-activities like an incoming inspection or a preparation of the components for their intended use.

NOTE 2 See Figure F.6 for the context.

F.1.52 Refined budgets *: reworked or updated budget information.

NOTE See Figures F.2 and F.4 for the context.

F.1.53 Select equipment from subcontractors (AAM A23): any actions to be taken to choose components, machinery and other apparatus from subcontractors that meet the requirements specified in the detailed list of requirements.

NOTE See Figure F.4 for the context.

F.1.54 Simulate designed system (AAM A34): simulation of a planned or existing electrotechnical system to verify or to improve the design.

NOTE See Figure F.5 for the context.

F.1.55 Specification: any detailed description of the particulars of some projected work together with directions to be followed by the implementor.

ISO 10303-212:2001(E)

NOTE 1 That includes data like functional description, dimensions or materials to be used. Specifications may contain schematic diagrams, tables or figures.

NOTE 2 See Figures F.2, F.4, and F.5 for the context.

F.1.56 Standards and rules *: any international, national or company standards and rules used during the design process of an electrotechnical system.

NOTE See Figure F.1 for the context.

F.1.57 System as built: the electrotechnical system is in this state when it is actually manufactured or constructed. Any change orders issued since release of the product-as-designed milestone are incorporated.

NOTE See Figures F.2, F.6, and F.7 for the context.

F.1.58 System as designed: the electrotechnical system is in this state when the conceptual design, according to the contractual requirements or according to the specification, is completed. The parts of the electrotechnical system are specified completely.

NOTE See Figures F.2, F.5, and F.6 for the context.

F.1.59 System as installed: the electrotechnical system is in this state when it is in place at the customers site, the process of doing the settings has taken place, and the system meets the requirements of the customer.

NOTE See Figure F.7 for the context.

F.1.60 Test (AAM A43): any actions to be taken to verify the ability of the electrotechnical system, or parts thereof, to satisfy the specified functionality and performance.

NOTE See Figure F.6 for the context.

F.1.61 Test reports: documents or data verifying tested characteristics of an item.

NOTE 1 In many cases test reports are produced by using desktop publishing systems. Even though the data created by those systems may be structured in a way that is not supported by this part of ISO 10303 such data may be referenced by using the concepts of the external_reference UoF.

NOTE 2 See Figures F.2, F.6, and F.7 for the context.

F.1.62 Test system (AAM A52): final inspection of the functionality and performance of the installed system to validate its ability to satisfy the requirements of the customer.

NOTE See Figure F.7 for the context.

F.1.63 Tests *: the data used to determine the ability of the design or its implementation to satisfy particular requirements.

EXAMPLE Examples include abstract test cases or executable test cases.

NOTE See Figures F.2, F.5, F.6, and F.7 for the context.

F.1.64 Training material: any documents and data used to educate the end-user.

NOTE 1 In many cases training material is produced by using desktop publishing systems. Even though the data created by those systems may be structured in a way that is not supported by this part of ISO 10303 such data may be referenced by using the concepts of the external_ -reference UoF.

NOTE 2 See Figure F.5 for the context.

F.2 Application activity model diagrams

The application activity model diagrams are given in Figures F.1 through F.7. The graphical form of the application activity model is presented in the IDEF0 activity modeling format. Activities and data flows that are out of scope are marked with asterisks.

ISO 10303-212:2001(E)

Table F.1 consists of five columns. The first column contains the name of the data class in the AAM. In the columns two, three and four the data classes are marked to be in scope or out of scope.

The classification "in scope - full support" means that corresponding application objects are provided in clause 4 of this part of ISO 10303.

The classification "in scope - reference only" means that the explicit description of the data is not specified by this part of ISO 10303, but it may be referenced to.

EXAMPLE 1 The data description of a documentation done with a desktop publishing system is not specified by this part of ISO 10303. The reference to this data, the knowledge about its existence and about its type, creator, etc, is supported by this part of ISO 10303.

Data classes classified as "out of scope" are not supported by this part of ISO 10303. In the figures data classes that are out of scope are marked with asterisk after its names.

The fifth column of Table F.1 lists the correspondence of the data classes to the UoFs specified in clause 4.

NOTE The table reflects the assignment of UoFs that is considered to be highly probable. Depending from the actual situation the data may contain information from other UoFs.

EXAMPLE 2 UoFs `organizational_data`, `properties`, `classification`, `item_designation`

Table F.1 - AAM - data classes

Data flow	In scope		Out of scope	UoF correspondence
	full support	reference only		
Available components	X			product_structure, physical_connectivity, properties, classification, properties, organizational_data
Budgets			X	
Change request	X			documentation, schematic_documentation, work_management, configuration_management, effectiveness, organizational_data
Components	X			product_structure, physical_connectivity, classification, properties, external_reference, organizational_data
Component test reports		X		documentation, schematic_documentation, external_reference, organizational_data
Contract	X			organizational_data
Contracted list of requirements	X			conditions, documentation, classification, organizational_data
Contracted system	X			all Units of Functionality
Customer requirements	X			conditions, documentation, external_reference, classification, properties
Design requirements	X			conditions, documentation, external_reference, classification, properties

Table F.1 - AAM - data classes (continued)

Data flow	In scope		Out of scope	UoF correspondence
	full support	reference only		
Detailed list of requirements	X			conditions, documentation, external_reference, classification, properties, organizational_data
Documentation	X			all Units of Functionality
Electrotechnical system as delivered	X			all Units of Functionality
Explanatory documents	X			documentation, dimensioned_documentation, schematic_document, external_reference, classification
Function describing data	X			function_structure, functional_connectivity, messages, properties, documentation, schematic_dedocumentation, dimensioned_documentation, external_reference, classification, effectivity
Functional overview	X			function_structure, functional_connectivity, messages, properties, classification
Guidelines			X	
Instruction manuals	X			documentation, dimensioned_documentation, schematic_documentation, external_reference, classification

Table F.1 - AAM - data classes (continued)

Data flow	In scope		Out of scope	UoF correspondence
	full support	reference only		
List of allowed components	X			product_structure, physical_connectivity, classification, effectivity
List of available components	X			product_structure, physical_connectivity, classification
List of requirements	X			conditions, documentation, external_reference, classification, schematic_documentation
Location describing data	X			installation, course, site, properties, documentation, dimensioned_documentation, properties, classification
Location-on-site data	X			installation, course, site, properties, documentation, dimensioned_documentation, properties, classification
Management issues			X	
Material			X	
Negotiated changes	X			conditions, configuration_management, documentation, properties, classification
Offer			X	
Offered system	X			all Units of Functionality
Orders to subcontractors	X			organizational_data
Parts list	X			product_structure, classification

Table F.1 - AAM - data classes (concluded)

Data flow	In scope		Out of scope	UoF correspondence
	full support	reference only		
People and machines			X	
Product describing data	X			product_structure, physical_connectivity, properties, documentation, properties, classification
Promotional material			X	
Refined budgets			X	
Specification	X			all Units of Functionality
Standards and rules			X	
System as built	X			all Units of Functionality
System as designed	X			all Units of Functionality
System as installed	X			all Units of Functionality
Test reports		X		documentation, classification, external_reference
Tests			X	
Training material	X			documentation, schematic_documentation, dimensioned_documentation, classification, external_reference

Annex G

(informative)

Application reference model

This annex provides the application reference model for this part of ISO 10303 and is given in figures G.1 through G.89. The application reference model is a graphical representation of the structure and constraints of the application objects specified in clause 4. The graphical form of the application reference model is presented EXPRESS-G. The application reference model is independent from any implementation method.

Annex J

(informative)

Computer interpretable listings

This annex references a listing of the complete EXPRESS schema specified in annex A of this part of ISO 10303 without comments or other explanatory text. It also references a listing of the EXPRESS entity names and corresponding short names as specified in annex B of this part of ISO 10303. These listings are available in computer-interpretable form and can be found at the following URLs:

EXPRESS: <http://www.mel.nist.gov/step/parts/part212/is/>

Short names: <http://www.mel.nist.gov/div826/subject/apde/snr/>

If there is difficulty accessing these sites contact ISO Central Secretariat or contact the ISO TC 184/SC4 Secretariat directly at: sc4sec@cme.nist.gov.

NOTE The information provided in computer-interpretable form at the above URLs is informative. The information that is contained in the body of this part of ISO 10303 is normative.
