ISO 10303-236:2006(E) and Application modules

ISO 10303 (STEP) supports many different product information exchange and sharing scenarios which contain common information requirements.

The STEP application modules contain reusable data models for key collections of product information within ISO 10303, which can be combined to support information exchange for different business scenarios. By reusing these models, users will save the cost of remodelling common information structures, and can be assured of interoperable data exchange processes.

This CD-ROM contains

- ISO 10303-236:2006 which specifies the use of the integrated resources necessary for the scope and information requirements for furniture catalog and interior design;
- 6 application modules in HTML format, forming part of the ISO 10303 (STEP) series of documents. Each application module is published as a separate part: 436, 1351, 1352, 1353, 1354 and 1355.

The application modules will also be used in other STEP parts currently under development, and are available for developers to use as core information models for product data.

All parts are first editions.

Installation

This publication has been packaged as a zipped file. Do NOT open the file from the CD-ROM, but save it in the desired location in your local environment. Once the file has been saved in your local environment, click on the saved file to unzip its contents. For compound documents (e.g. HTML documents comprising several files or folders, documents that have been subdivided owing to the total file size, etc.), in order for the links between documents to function properly, the file and folder names must be maintained and the files stored in the same folder.

Consult the Readme file for detailed information specific to this publication.
