Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 10457 was prepared by Technical Committee ISO/TC 72, *Textile machinery and machinery for dry-cleaning and industrial laundering*, Subcommittee SC 4, *Dyeing and finishing machinery and accessories*.

This second edition cancels and replaces the first edition (ISO 10457:1991), which has been technically revised.

Textile machinery — Dyeing and finishing machines — Nominal speeds

1 Scope

This International Standard specifies nominal speeds for dyeing and finishing machines, with the aim of simplifying the choice of the drive units and facilitating the combination of individual machines in a production plant.

2 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

2.1

nominal speed

maximum production speed of the machine or plant

2.2

production speed

speed of the fabric, measured at the exit of the machine

2.3

difference speed

difference between the local speed of the fabric and the production speed, expressed as a percentage of the production speed

EXAMPLE Overfeed at a shrinkage/stretch.

2.4

local speed

speed of the fabric measured at any point other than the exit of the machine

3 Nominal speeds

The range of nominal speeds is given in Table 1.

Table 1 — Nominal speeds, in metres per minute

5	10	20	30	40	50	60	80	100	125	150	200	250	300	400	500	600
