Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this Amendment may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to International Standard ISO 11112:1995 was prepared by Technical Committee ISO/TC 127, *Earth-moving machinery*.

Earth-moving machinery — Operator's seat — Dimensions and requirements

AMENDMENT 1

Page 3, Table 1

Add a footnote number “11)” after the description for “fore and aft adjustment²⁾”, as follows:

“fore and aft adjustment²⁾ 11)”

At the bottom of Table 1, add the following table footnote:

“11) For compact machines (see ISO 6165:1997), either the fore and aft adjustment shall be at least ± 35 mm, or corresponding adjustment of frequently used operator's controls shall be provided.”

This amendment is proposed to allow a smaller fore and aft seat adjustment requirement for compact machines.

For additional clarity, add a footnote number “12)” after the description for “vertical adjustment²⁾”, as follows:

“vertical adjustment²⁾ 12)”

At the bottom of Table 1, add the following table footnote:

“12) For compact machines (see ISO 6165:1997), a vertical adjustment is not required.”
