
**Glass-reinforced thermosetting plastics
(GRP) pipes — Determination of the long-
term specific ring relaxation stiffness
under wet conditions and calculation of
the wet relaxation factor**

AMENDMENT 1

*Tubes en plastiques thermodurcissables renforcés de verre (PRV) —
Détermination de la rigidité annulaire spécifique à long terme en
relaxation, en conditions mouillées, et calcul du facteur de relaxation au
mouillé*

AMENDEMENT 1

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO 14828:2003 was prepared by Technical Committee ISO/TC 138, *Plastics pipes, fittings and valves for the transport of fluids*, Subcommittee SC 6, *Reinforced plastics pipes and fittings for all applications*.

Glass-reinforced thermosetting plastics (GRP) pipes — Determination of the long-term specific ring relaxation stiffness under wet conditions and calculation of the wet relaxation factor

AMENDMENT 1

Page 1, Clause 2

Replace the dated Normative references to ISO 7685 and ISO 10928 with the following undated references:

ISO 7685, *Plastics piping systems — Glass-reinforced thermosetting plastics (GRP) pipes — Determination of initial specific ring stiffness*

ISO 10928, *Plastics piping systems — Glass-reinforced thermosetting plastics (GRP) pipes and fittings — Methods for regression analysis and their use*

Page 4, Clause 4

Following the third paragraph, replace item a) of the Note with: “a) the method for measuring the initial specific ring stiffness, i.e. constant load or constant deflection (see 3.4)”;

Page 8, 11.1

Replace the last sentence with: “For each test piece, analyse the stiffness versus time data in accordance with ISO 10928”.
