## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

ISO 23748 was prepared by ACE/12/1 as EN 3748:2001 and was adopted (without modification other than those stipulated below) by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 10, *Aerospace fluid systems and components*.

The following are the modifications made in this International Standard:

- reference to ISO 3601-1 size codes in tables;
- correction in [Table 13](#) of value 90,27 to 91,27;
- addition of “static applications” in the title and scope;
- “according to European Standards” was removed in the scope;
- any reference to European Standards were removed.

# Aerospace series — O-ring grooves — Dimensions

## 1 Scope

This International Standard specifies the dimensions of grooves for use with O-rings for aerospace in static sealing applications:

- radial sealing: rod or bore mounted O-rings;
- axial sealing: internal or external pressure source.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

There are no normative references in this document.

## 3 Symbols

$b$	O-ring groove width
$d_1$	O-ring inside diameter
$d_2$	O-ring section diameter
$d_3$	O-ring groove diameter, rod mounted
$d_4$	bore diameter, rod mounted
$d_5$	rod outside diameter bore mounted
$d_6$	O-ring groove diameter bore mounted
$d_7$	O-ring groove outside diameter, internal pressure
$d_8$	O-ring groove inside diameter, external pressure
$d_9$	rod outside diameter, rod mounted
$d_{10}$	bore diameter, bore mounted
$h$	groove height
$R$	edge radius on groove
$r_1$	corner radius on groove
$t$	housing depth
$Z$	lead-in chamfer length

#### 4 Required characteristics

##### 4.1 Configuration — Dimensions — Tolerances

###### 4.1.1 General

Only recommended sizes are given in the tables.

Dimensions and tolerances are in millimetres. Surface roughness values are in micrometres.

###### 4.1.2 Radial sealing — Rod housing: Configuration code A

###### 4.1.2.1 General

This configuration corresponds to radial grooves in static applications, rod mounted. See [Figure 1](#) and [Tables 1](#) to [7](#).

#### Key

- 1 bore
- 2 rod
- a See [Table 1](#).
- b Groove diameter  $d_3 \leq 50$ : maximum run-out tolerance  $Y = 0,025$ .  
Groove diameter  $d_3 > 50$ : maximum run-out tolerance  $Y = 0,05$ .
- c No burrs permitted in this area.

Figure 1

Table 1

Surface		Roughness							
		$R_a$				$R_{max.}$			
		continuous pressure		with pressure variation		continuous pressure		with pressure variation	
		≤5 MPa	>5 MPa	≤5MPa	>5 MPa	≤5 MPa	>5 MPa	≤5 MPa	>5 MPa
Groove	Side surfaces	3,2	1,6	1,6	1,6	12,5	6,3	6,3	6,3

4.1.3 Radial sealing — Bore housing: Configuration code B

4.1.3.1 General

This configuration (not recommended) corresponds to radial grooves in static applications, bore mounted. See [Figure 2](#) and [Tables 8](#) to [14](#).

Key

- 1 rod
- 2 bore
- a See [Table 8](#).
- b Groove diameter  $d_6 \leq 50$ : maximum run-out tolerance  $Y = 0,025$ .  
Groove diameter  $d_6 > 50$ : maximum run-out tolerance  $Y = 0,05$ .
- c No burrs permitted in this area.

## 5 Designation

EXAMPLE

## 6 Drawing presentation

### 6.1 General

The recommended configurations are specified in 6.2 to 6.5. However, indicate all dimensions in conformity with this International Standard is acceptable.

### 6.2 Configuration code A

EXAMPLE See [Figure 5](#).

Key

1 ISO23748A0040A

Figure 5

### 6.3 Configuration code B

EXAMPLE See [Figure 6](#).

**Key**

1 ISO23748B0100B

**Figure 6**

### 6.4 Configuration code C

EXAMPLE See [Figure 7](#).

**Key**

1 ISO23748B0400C

**Figure 7**

### 6.5 Configuration code D

EXAMPLE See [Figure 8](#).

**Key**

1 ISO23748E3650D

**Figure 8**
